SM500F
Field-mountable paperless recorder

Introduction
This publication provides the following commissioning instructions for the SM500F field-mountable paperless recorder:

1. Location
   location requirements

2. Mounting
   installation requirements to achieve IP66/NEMA 4X hose-down rating

3. Electrical connections
   AC and DC min./max. values and fuse requirements

4. Navigation
   navigating the user-interface quickly and effectively

5. Menus overview
   menu familiarization

6. Basic setup
   steps required for first-time use

7. Symbols and icons
   a schedule of icons/warning symbols that may be displayed during operation

For more information

Health & Safety

Safety conventions
Symbols that appear in this document are explained below:

**WARNING – Bodily injury** This symbol in conjunction with the signal word ‘WARNING’ indicates a potential electrical hazard. Failure to observe this safety information will result in death or severe injury.

**CAUTION – Minor injuries** A caution is used to indicate a condition which, if not met, could cause minor or moderate personal injury and / or damage to the equipment. Do not proceed beyond a caution until all conditions have been met.

**IMPORTANT (NOTE)** A note is used to indicate important information or instructions that should be considered before operating the equipment.

Safety precautions
Be sure to read, understand and follow the instructions contained within this manual before and during use of the equipment. Failure to do so could result in bodily harm or damage to the equipment.

**WARNING – Bodily injury** Installation and maintenance of this product must only be conducted by personnel authorized to work on electrical installations and in accordance with relevant local regulations.

Potential safety hazards

**Electrical**

**WARNING – Bodily injury** To ensure safe use when operating this equipment, the following points must be observed:
- Up to 240 V AC may be present. Be sure to isolate the supply before removing the terminal cover.
- Normal safety precautions must be taken to avoid the possibility of an accident occurring when operating in conditions of high pressure and / or temperature.

Safety advice concerning the use of the equipment described in this manual or any relevant Material Safety Data Sheets (where applicable) can be obtained from the Company, together with servicing and spares information.

**End-of-life disposal**

The recorder contains a small lithium battery that must be removed and disposed of responsibly in accordance with local environmental regulations. The remainder of the recorder does not contain any substance that causes undue harm to the environment and must be disposed of in accordance with the Directive on Waste Electrical and Electronic Equipment (WEEE). It must not be disposed of in Municipal Waste Collection.

**Cleaning**
The complete recorder can be hosed down if it has been installed to IP66 / NEMA 4X standards – see Section 2 on page 5. Warm water and a mild detergent can be used.

**Symbols**

Symbols that appear on this product are shown below:

- **Protective earth (ground) terminal.**
- **Both direct and alternating current supply.**
- This symbol, when noted on a product, indicates a potential hazard which could cause serious personal injury and / or death. The user should reference this instruction manual for operation and / or safety information.
- This symbol, when noted on a product enclosure or barrier, indicates that a risk of electrical shock and / or electrocution exists and indicates that only individuals qualified to work with hazardous voltages should open the enclosure or remove the barrier.
- Recycle separately from general waste under the WEEE directive.

**Safety standards**
This product has been designed to satisfy the requirements of IEC61010-1:2010 3rd edition ‘Safety Requirements for Electrical Equipment for Measurement, Control and Laboratory Use’ and complies with US NEC 500, NIST and OSHA.

**EC Directive 89/336/EEC**

**Electrical** – In order to meet the requirements of the EC Directive 89/336/EEC for EMC regulations, this product must be used in an industrial environment.
## Restriction of Hazardous Substances (RoHS)

The European Union RoHS Directive and subsequent regulations introduced in member states and other countries limits the use of six hazardous substances used in the manufacturing of electrical and electronic equipment. Currently, monitoring and control instruments do not fall within the scope of the RoHS Directive, however ABB has taken the decision to adopt the recommendations in the Directive as the target for all future product design and component purchasing.

## Specification

**EMC**  
Emissions & immunity  
Meets requirements of IEC61326 for an Industrial Environment

### Electrical

**Supply ranges**

- 100 V to 240 V AC ± 10% (90 V min to 264 V max) or
- 105 V DC min. to 115 V DC max.
- 10 V to 36 V DC (optional)

**Power consumption**

10 W max. 15 VA max.

**Power interruption protection**

No effect for interrupts of up to 20 ms

### Safety

**General safety**

EN61010-1  
Overvoltage Class III on mains, Class II on inputs and outputs  
Pollution category 2  
CSA 61010-1  
UL 61010-1

**Isolation**

500 V DC to earth (ground)

### Environmental

**Operating temperature range**

-10 to 50 °C (14 to 122 °F)

**Operating humidity range**

5 to 95 %RH (non-condensing)

**Storage temperature range**

-20 to 70 °C (−4 to 174 °F)

**Enclosure sealing**

IP66 and NEMA4X (the enclosure meets the requirements of the NEMA 4X hosedown test)

**Vibration**

Conforms to EN60068–2–6
1 Location

Locate the recorder in a position where its temperature and humidity specification will not be exceeded, and ensure that it is suitably protected from direct sunlight, rain, snow and hail.

Select a location away from strong electrical and magnetic fields. If this is not possible, particularly in applications where mobile communications equipment is expected to be used, screened cables within flexible, earthed metal conduit must be used.

A – Close to sensors

B – Eye-level location

C – Avoid vibration

Keep distance to a minimum

A – Within temperature limits

B – Within humidity limits

IP66 / NEMA 4X

C – Environmental protection standards

D – Use screened cable

Fig. 1 Siting

Fig. 2 Environmental requirements
## Mounting

**IMPORTANT (NOTE)** If removal of knockouts is required, refer to Cable entries on page 8.

### Panel-mounting

Referring to Fig. 3:

1. Cut the correct sized hole in panel \( A \).
2. Insert the recorder \( B \) into the panel cut-out.
3. Screw one clamping screw \( C \) into left-hand bracket \( D \) until 10 to 15 mm of the thread protrudes from the other side of the bracket and position one clamp \( E \) over the end of the thread.
4. Holding the assembly together, position the bracket into the left-hand recess on the rear of the recorder case and secure with bracket securing screw \( F \). Ensure that the plastic washer remains in the position fitted.
5. Repeat steps 3 and 4 for the right-hand panel clamp assembly.
6. Tighten clamping screws \( C \) evenly and securely by hand.

**IMPORTANT (NOTE)** Tightening the clamping screws correctly is critical to ensuring proper compression of the panel seal and to achieving the IP66/NEMA 4X hosedown rating.

### Wall-mounting

Referring to Fig. 4:

1. Position left- and right-hand mounting brackets \( A \) into the recesses on the rear of the recorder as shown and secure with bracket securing screws \( B \). Ensure the plastic washers remain in the positions fitted.
2. Mark fixing centers and drill suitable holes in the wall.
3. Secure the recorder to the wall using 2 screws \( C \) in each mounting bracket.

**Dimensions in mm (in.)**

**Fig. 3 Panel-mounting**

**Fig. 4 Wall-mounting**
Pipe-mounting (optional)

Referring to Fig. 5:

1. Fit two M6 x 50 mm long hexagon-head screws (A) through one clamp plate as shown.

2. Using the appropriate holes to suit vertical or horizontal pipe, secure the clamp plate to the pipe-mounting bracket using two M6 x 8 mm long hexagon-head screws (B) and two spring lock washers (C).

3. Position the pipe mounting bracket into the recesses on the rear of the recorder as shown and secure with two bracket securing screws (D). Ensure the plastic washers remain in the positions fitted.

4. Secure the recorder to the pipe using the remaining clamp plate, spring lock washers and nuts (E).

Fig. 5 Pipe-mounting
Electrical connections

WARNING – Bodily injury
- The recorder is not fitted with a switch therefore a disconnecting device such as a switch or circuit breaker conforming to local safety standards must be fitted to the final installation. It must be fitted in close proximity to the recorder within easy reach of the operator and must be marked clearly as the disconnection device for the recorder. A fuse must be fitted in accordance with Fig. 10.
- Remove all power from supply, relay and any powered control circuits and high common mode voltages before accessing or making any connections.
- Use cable appropriate for the load currents: 3-core cable rated 3 A and 90 °C (194 °F) minimum, that conform to either IEC 60227 or IEC 60245. The terminals accept cables from 0.8 to 2.5 mm² (18 to 14 AWG).
- The recorder conforms to Installation Category II of IEC 61010.
- All connections to secondary circuits must have basic insulation.
- After installation, there must be no access to live parts, for example, terminals.
- Terminals for external circuits are for use only with equipment with no accessible live parts.
- If the recorder is used in a manner not specified by the Company, the protection provided by the equipment may be impaired.
- All equipment connected to the recorder’s terminals must comply with local safety standards (IEC 60950, EN601010-1).

IMPORTANT (NOTE)
- Always route signal leads and power cables separately, preferably in earthed (grounded) metal conduit.
- Use screened cable for signal inputs and relay connections.
- Replacement of the internal battery (type Varta CR2025 3V lithium cell) must be carried out by an approved technician only.

USA and Canada only
- The supplied cable glands are provided for the connection of signal input and ethernet communication wiring only.
- The supplied cable glands and use of cable/flexible cord for connection of the mains power source to the mains input and relay contact output terminals is not permitted in the USA or Canada.
- For connection to mains input and relay contact outputs, use only suitably rated field wiring insulated copper conductors rated min. 300 V, 14 AWG, 90C. Route wires through suitably rated flexible conduits and fittings.
Cable entries

**IMPORTANT (NOTE)**
- For wall- or pipe-mounting to IP66/NEMA4X standard, fit suitable cable glands. Blank off any unused holes with the blanking plugs and retaining clips supplied with the recorder.
- Optional cable glands are available and are suitable for use with cables Ø 5 to 9 mm (0.20 to 0.35 in.). The alternative 2-hole cable gland inserts are suitable for use with cables Ø 5 mm (0.20 in.). The Ethernet cable gland is suitable for use with cable Ø 4.8 to 6.3 mm (0.19 to 0.25 in.).

Referring to Fig. 6:
1. Route cables through four holes A provided on the bottom of the case.
2. Knockouts B are provided on the rear of the recorder case as an alternative means of cable entry. To remove a knockout, place the back of the recorder on a firm, flat surface, open the door and inner cover and carefully remove the knockout by placing the blade of a small, flat-bladed screwdriver into the knockout groove and tapping the screwdriver smartly with a hammer.
3. Use cable entry hole or knockout C if the optional Ethernet module is fitted.
4. Connect Ethernet cable D, ensuring that if optional input modules are fitted in positions B and C, the cable is routed between their terminal blocks as shown.
5. Connect cable screens only to terminals E.

![Fig. 6 Cable knockouts, ethernet cable routing and cable screening connections](image-url)
Connections

Fig. 7 Electrical connections

*In the powered-down condition the current input is open circuit. In order to maintain a current loop when the recorder is powered down, fit a zener diode (BZX79 – B/C2V4) to the input as shown.

**IMPORTANT (NOTE)** Tighten power supply terminal screws to a torque of 0.8 Nm (7 lbf.in). Tighten all other terminal screws to a torque of 0.5 Nm (4.5 lbf.in).
Power supply connections

**IMPORTANT (NOTE)**

Tighten all analog / digital input terminal screws to a torque of 0.5 Nm (4.5 lbf.in).

Transmitter power supply module

One transmitter power supply module can be fitted in position D to provide a nominal 24 V supply capable of driving two, 2-wire transmitters.

**WARNING.** Use fuse rating 315 mA (max.) type T

A – AC supply

**Warning.** Use fuse rating 1.5 A (max.) type T

B – DC supply

**Fig. 8** Single analog / digital input connections

**Fig. 9** Dual analog / digital input connections

**Fig. 10** Power supply connections

**Fig. 11** Power supply connections
4 Navigation

Operator keys and door features

The recorder is operated via the Operator Keys located below the screen. Referring to Table 1, operator keys and door features are located as follows:

<table>
<thead>
<tr>
<th>Key</th>
<th>Function</th>
</tr>
</thead>
<tbody>
<tr>
<td>A</td>
<td>Menu key – displays or hides the context-sensitive operator menu associated with each view. Also cancels the menu without making a change or returns to the previous menu level</td>
</tr>
<tr>
<td>B</td>
<td>Group key – selects a different process group. or Left key – scrolls left.</td>
</tr>
<tr>
<td>C</td>
<td>Up / Down keys – highlights menu items and scrolls through previously recorded data.</td>
</tr>
<tr>
<td>D</td>
<td>View key – selects a different process view or log. or Right key – scrolls right.</td>
</tr>
<tr>
<td>E</td>
<td>Enter key – selects the highlighted menu item. If 'Screen Capture' is set to 'Enabled' during configuration and a Secure Digital (SD) archive media card is inserted in the recorder, the operator can save a snapshot of any an image of any Chart, Indicator, Audit Log, Alarm Log or Totalizer Log view to the SD card if is pressed when an operator menu is not displayed.</td>
</tr>
<tr>
<td>F</td>
<td>Door release.</td>
</tr>
<tr>
<td>G</td>
<td>Door lock (optional).</td>
</tr>
</tbody>
</table>

Table 1 Operator keys and door features
Menus overview

Operator menus
Press \( \text{Menu} \) from any operator or log view to display the Operator menus. Recorder functions are then accessed by using the \( \text{Menu} \ ) and \( \text{Option} \) keys to highlight the required option within the displayed menu and pressing \( \text{Enable/Select} \) to select the highlighted option.

**IMPORTANT (NOTE)** Only process groups and views that are enabled are displayed.

Configuration level menus
To access the configuration menus:
1. Highlight Configuration in the operator menu.
2. Press \( \text{Menu} \) and highlight the operator to log on as.
3. Press \( \text{Password} \) and enter the operator password (if configured).

**IMPORTANT (NOTE)** If the recorder is being used for the first time, a password is not set.

4. Select the configuration entry mode:
   a. Edit Current Configuration
   b. Open a Configuration
   c. New Configuration
## Configuration menu options comprise:

### Common

<table>

6 Basic setup

Perform the following steps in sequence to set up the recorder for the first time. For detailed configuration instructions refer to the User guide – IM/SM500F-EN.

Start up
1. Locate and mount the recorder as described in Sections 1 and 2.
2. Make electrical and signal connections as described in Section 3.
3. Power up the recorder.
4. Proceed to the next step to set the date and time.

Set the date and time
1. Press the \ key from any operator or log view to display the operator menu.
2. Use the  /  keys to select Operator 1 and press the \ key.
3. Use the  /  keys to select the ‘OK’ button at the Operator 1 – Password (0…9999) page and press the \ key (passwords are not set at first-time use). The Operator 1 Edit / Open / New Configuration dialog is displayed with the Edit Current Configuration button ( ) highlighted.
4. Press the \ key to display the system configuration screen.
5. Press the \ key to display the configuration menu, use the  /  keys to select the Common menu option and press \ to display the common configuration page.
6. Use the \ key to select the Time tab and press the \ key to edit the Date and Time field. The following warning is displayed:
   press the \ key.
7. Use the  /  and  /  keys to select the first field to edit.
8. Enter the required information in each field pressing \ before using the  /  and  /  keys to move to the next field.
9. When all fields have been set, use the  /  and  /  keys to highlight \ and press \ to return to the Time tab.
10. Proceed to the next step to set the sample rate.

Configure the process group(s)
1. Press the \ key to display the configuration menu, use the  /  keys to select Group 1 and press the \ key to display the group’s Recording tab.
2. Use the  /  keys to highlight the edit button ( ) next to each field and press the \ key to configure each parameter as required.
3. Use the \ key to select the Chart tab.
4. Use the  /  keys to highlight the edit button ( ) next to each field and press the \ key to configure each parameter as required.
5. If Indicator View is required, use the \ key to select the Indicator tab.
6. Use the  /  keys to highlight the edit button ( ) next to each field and press the \ key to configure each parameter as required.
7. Use the \ key to select the Archive tab.
8. Use the  /  keys to highlight the edit button ( ) next to each field and press the \ key to configure each parameter as required.
9. Repeat steps 1 to 8 for Group 2 recording parameters (if required).

Configure the recording channels
1. Press the \ key to display the configuration menu, use the  /  keys to select Channels 1.1 - 1.6, press the \ key and use the  /  keys to highlight the first channel to configure and press the \ key to display the channel’s Setup tab.
2. Use the  /  keys to highlight the edit button ( ) next to each field and press the \ key to configure each parameter as required.
3. Use the \ key to select the Analog I/P XX tab.
4. Use the  /  keys to highlight the edit button ( ) next to each field and press the \ key to configure each parameter as required.
5. Repeat steps 3 and 4 for each of the Alarm and Totalizer (if enabled) tabs as required.
6. Press the \ key to display the configuration menu, use the  /  keys to select Channels 1.1 - 1.6, press the \ key and use the  /  keys to highlight the next channel to configure and press the \ key to display the channel’s Setup tab.
7. Repeat steps 2 to 5 to configure the channel as required.
8. Repeat steps 6 and 7 for each of the remaining channels as required.
9. Repeat steps 1 to 8 for Channels 2.1 - 2.6 (if required).
Configure the I/O modules

**IMPORTANT (NOTE)** The recorder detects the type of module fitted in each position automatically.

1. Press the key to display the configuration menu, use the / keys to select I/O Modules and press the key.
2. Use the / keys to select the tab for the first module to configure and press the key.
3. Use the / keys to highlight the edit button ( ) next to each field and press the key to configure each parameter as required.
4. Repeat steps 2 and 3 for each of the remaining modules as required.

Save the configuration and exit

1. Press the key to display the configuration menu, use the / keys to select Exit and press the key. The save configuration dialog is displayed:

   ![Save configuration dialog](image)

2. Press the key.
3. Use the / keys to select either Internal Storage or External Storage and press the key to save the configuration and start recording.

Archiving

To start archiving, open the recorder’s door, insert an SD card and close the door. Archiving is initiated automatically.

**Archiving icons**

- External archive media on-line with % used indication
- External archive media off-line with % used indication
- External archive media not inserted (flashing exclamation mark)
- Media update in progress.
- **Do not remove media while this symbol is displayed**
  - External media 100% full, archiving stopped (flashing cross)
  - Warning! Too many files (left-hand icon – media online, right-hand icon – media offline)
  - Too many files, archiving stopped (flashing cross)

**Status icons**

- Historical review active
- Alarm(s) active, red flashing border indicates unacknowledged alarm(s) active
- AutoView scroll active
- Clock battery failure

**Alarm event icons**
