

Western Service Center is Open Now!

ABB Western Service Center in Edmonton is open now to serve western provinces and territories: Alberta, British Columbia, Saskatchewan, Manitoba, North West Territory and Yukon. ABB service center provides workshop and on-site services by factory-trained and ABB-certified technicians for all types of ABB and non-ABB electrical equipment.

Western Service Center

ABB Service Canada

ABB service Canada offers comprehensive services, inspection, maintenance, repairs and refurbishment of breakers, contactors, Motor Control Centers (MCC), switchgear, panel boards and protection systems for :

- ABB
- GE
- Schneider
- Eaton
- Westinghouse
- ITE
- Siemens
- Federal Pioneer
- Sace
- BCC
- Powell
- Federal Pacific
- Klockner Moeller
- Merlin Gerin
- Others

When ordinary maintenance is no longer sufficient, a complete overhaul of the electrical apparatus must be carried out in order to solve problems specifically connected with a particularly long or heavy use of the products. A comprehensive refurbishment program consists of a complete rebuild to original specification.

Our shops are fully outfitted to bring the components back to original factory specifications, full testing of functionality and safety requirements are completed. Products are received, inspected and tested to develop a comprehensive report outlining what is required to repair or refurbish the unit.

This report is shared with the customer to determine best path forward and pricing. Once agreed, the units are fully repaired/re-furbished by our factory trained technicians and prepared for return in a timely manner to the customer. Warranties and service packages can be offered as well.
