ABB's world of technology

The main story of *ABB Review 2/2013* will be dedicated to the breakthrough that will not just go down in history as the greatest innovation of the year, but possibly that of several decades. The DC breaker will change in a radical way the mode by which power is transmitted and distributed, finally making the DC grid achievable. The present issue already contains some outline information on this breakthrough, but *ABB Review 2/2013* will take a more detailed look at the technology behind the breaker and explain why it is so important.

Other aspects to be featured in *ABB Review 2/2013* will include several articles on the company's different activities supporting the mining sector, ranging from ventilation and drives to workforce tracking. A section on marine applications will look at dredgers and lifting vessels. Further articles from across the board of the company' activities will round off this technology-oriented issue.
