

# Smart home controlled on the go

Following the ABB-Welcome door communication system, ABB-free@home® can now also be controlled remotely via the myABB-LivingSpace web platform

Frankfurt, March 13, 2016 – Control everything at home while on the go from your smartphone or tablet – from lighting and heating, to blinds and room temperature. ABB makes this possible with its innovative web platform myABB-LivingSpace (<https://my.abb-livingspace.com>). Now all ABB-free@home® applications can also be controlled remotely via myABB-LivingSpace in addition to the ABB-Welcome door communication system that already had this function.

ABB-free@home®, the simple control system that transforms the house or the apartment into a smart home, can be controlled via a switch on the wall; the ABB-free@homeTouch; a web interface or an app on a smartphone or tablet. Connecting to myABB-LivingSpace using the app makes life even easier, as the app can be used either on the home WIFI network or on the go. This allows you to quickly check, whether all the lights are turned off or even to set a comfortable temperature, for example.

It's simple to set up: log in to myABB-LivingSpace. Login details only have to be entered in the free@home® app and in the free@home® System Access Point. The point-to-point encryption guarantees a secure connection. An additional benefit of connecting the free@home® system to myABB-LivingSpace is that it allows emails or push messages to be sent to smartphones with the free@home® app. So, a message can be sent to your smartphone informing you when a window has been left open etc.

Both the ABB-Welcome app and the ABB-free@home® app can be used on home WIFI networks or on the go. The app automatically switches between using the local network and mobile network. The connection to myABB-LivingSpace is a practical feature which makes remote access via smartphone or tablet easier for every customer.

The myABB-LivingSpace (<https://my.abb-livingspace.com>) platform is another important step towards mobile networking in intelligent home automation.

## Product benefits

- Fast remote access to ABB-free@home® and ABB-Welcome
- High level of intuitive interaction for occupants thanks to a single platform and login
- System with the highest security standard
- Optimal encryption using myABB-LivingSpace
- Intuitive operation – no network experience needed

ABB ([www.abb.com](http://www.abb.com)) is a leading global technology company in power and automation that enables utility, industry, and transport & infrastructure customers to improve their performance while lowering environmental impact. The ABB Group of companies operates in roughly 100 countries and employs about 135,000 people.
