

Ethernet CIU for connection to third party historians For ABB Automation Sentinel and QCS customers

Evolve ABB INFI-NET CIU that connect to third party historians using semAPI to ABB's latest Ethernet CIU.

The ICI800 is the Ethernet CIU for INFI 90, and Symphony Plus systems. ICI800 consists of an NIS21 Network Interface module and an IET800 InfiNet to Ethernet module designed to provide a 100MB Ethernet interface to the INFI-NET Control Network. The ICI800 and ABB's Harmony OPC Software frees you from outdated Serial and SCSI protocols.

Included is ABB's third party process historian evolution service, which provides a complete Harmony OPC Server Tag Configuration and the OSI PI (updated .xls import file) or AspenTech IP.21 (scripts to transfer records to utilize tag.atoms) configuration updates.

This offer continues ABB's commitment to investing in technologies that support and enhance your installed equipment in the following ways:

- Extending control system life
- Increasing system reliability
- Cost effective solutions
- Increasing control system capability

Compatibility

Harmony OPC Server software is compatible with existing INFI 90, Harmony and Symphony Plus systems.

Workstation hardware must be compatible with Microsoft Windows 7 SP1 and Windows Server 2008 SP2 32 Bit Operating Systems or Windows 7 SP1 and Server 2008 R2 64 Bit Operating Systems.
