100 ULTRA
Analog pH/ORP sensor
Measurement made easy
The ¾ in analog pH/ORP sensor for use in high-purity applications

Increased efficiency
• ABB’s glass formulation provides fast process response without compromising durability and robustness
• Close-coupled temperature measurement ensures high accuracy even with rapid temperature changes

Dependable performance
• Maintenance-free, saturated KCl matrix providing extended operation in high purity applications with minimal drift
• Large, porous PTFE junction reduces plugging and fouling effects while providing measurement stability
• Durable Kynar® body providing high chemical- and abrasion-resistance

Modular design
• Common ¾ in sensor design paired with intelligent accessories provides mounting flexibility with safety and convenience in mind
Introduction

Making the right sensor selection for your application should be simple and easy. To help you make the right choice, we’ve divided our new family of pH/ORP sensors into three distinct ranges based on the applications they have been designed for; the 100, 500 and 700 ranges.

The 100 range are entry-level sensors designed for light duty use, while the 500 range offer a robust design for industrial applications. The 700 range are a specialty range for target applications.

Each electrode is clearly named and is also color-coded for ease of identification. This enables you to easily select the best sensor to meet your needs, ensuring optimal plant efficiency, performance and lifetime; every time.

The 100 ULTRA analog pH/ORP sensor

Part of the next generation of ABB’s pH/ORP sensors, the analog 100 ULTRA is a cost-effective probe designed for ultra-pure water applications. Its maintenance-free design provides extended operation, stability and minimal drift in low conductivity samples down to 2 µS/cm.

The 100 ULTRA is suitable for use in:
- boiler water
- demineralized water
- power plants
- steam water analysis
- reverse osmosis
- condensate/feedwater

Performance you can trust

Featuring a maintenance-free design, the analog 100 ULTRA incorporates a super-saturated electrolyte matrix to minimize the measurement drift typically associated with high-purity applications, enabling it to operate in samples down to 2 µS/cm. The large, porous PTFE junction provides added measurement stability and improved process response while providing excellent anti-fouling resistance.
Improved process efficiency

Varying sample temperature is one of the most common causes of pH measurement error due to its impact on sensor output. The 100 ULTRA is equipped with a close-coupled temperature element capable of rapid response to quickly changing process conditions, ensuring a high level of accuracy and confidence in your measurement.

Robust glassware

Utilizing ABB’s experience in glass manufacturing dating back to the 1950s, the proprietary glass formulations used with the 100 ULTRA offer fast response without sacrificing durability. Selectable in several configurations, the robust glassware is made suitable for wide range of general-purpose applications.

Low temperature (LT) glass

For measurement below 15 °C (59 °F), our low temperature blue glass provides ultrafast response in applications such as municipal- and industrial-wastewater treatment. Available in bullet-style.

High-performance (S) glass

Our high-performance yellow glass provides fast response and accurate measurement over the entire pH range. With an extremely low sodium error, the glass can maintain its accuracy even at very high pH levels. Available in flat- or bullet-style.

ORP platinum electrode

Chemically inert, our platinum electrode is design for conventional ORP/Redox measurement with an RTD element providing process temperature information.
**Product adaptability**

The 100 ULTRA is available in flush- or notched-body design helping extend sensor operation and maintainability in challenging applications.

**Flush-body design**
The flush-body design, when paired with a flat-shaped glass electrode, helps promote self-cleaning when installed perpendicular to sample flow. In addition, the minimal protrusion prevents unwanted buildup, especially in fouling applications.

**Notched-body design**
The notched-body design provides additional protection for bullet-style glass electrodes; especially from abrasive applications that can damage the glass electrode rendering it unresponsive.

**Intelligent accessories**
The 100 ULTRA is offered with mounting accessories designed to improve adaptability into your process while providing safe and convenient operation. Available with flow-cell, quick-connect bayonet and dip pole assemblies, the 500 PRO utilizes modular accessories that are compatible with all ABB’s next generation ¾ in threaded sensor bodies. Optional auto-cleaning functionality is available as an added feature ensuring extended operation with minimal intervention.

**Extended storage**
We understand most customers maintain stock of pH/ORP sensors in case of unexpected demand. Ensuring peak performance, even after extended storage, is critical in maintaining product availability and keeping your process running.

The 100 ULTRA is stored in a specially-formulated solution with added anti-microbial agent keeping the sensor active for up to 2 years when stored as recommended.
### Dimensions

Dimensions in mm (in)

#### Flush sensor body

- 1/4 in NPT
- 1/4 in wrench flats
- 170.0 (6.7)
- 30.0 (1.2)

#### Notched sensor body

- 1/4 in NPT
- 7/8 in wrench flats
- 170.0 (6.7)
- 37.0 (1.5)

Specification

Measurements
- pH/ORP (platinum)
- Temperature

Measurement range
High performance (S) glass
0 to 14 pH
Low temperature (LT) glass
0 to 10 pH
ORP
-2000 to 2000 mV

Temperature range
High performance (S) glass (bullet)
0 to 100 °C (32 to 212 °F) (typical glass impedance at 25 °C [77 °F] = 250 MΩ)
High performance (S) glass (flat)
5 to 100 °C (41 to 212 °F) (typical glass impedance at 25 °C [77 °F] = 600 MΩ)
Low temperature (LT) glass
-5 to 50 °C (23 to 122 °F) (typical glass impedance at 25 °C [77 °F] = 25 MΩ)
ORP platinum electrode
0 to 60 °C (32 to 140 °F)

Temperature sensor
Pt100 (Class B, IEC 60751)

Maximum pressure
6 bar (90 psi)

Recommended minimum sample conductivity
2 μS/cm

Recommended sensor storage
Between 15 and 35 °C (59 and 95 °F)

Isothermal point at 25 °C (77 °F)
pH 7

Reference system
Ag/AgCl with KCl gel electrolyte, double junction plus ion trap

Process connections
¼ in NPT

Wetted materials
- Electrode body: PVDF (Kynar)
- Reference junction system: Porous PTFE and Viton O-rings
- Measure system: pH: Glass, ORP: Platinum

Approvals, certification and safety
CE Mark
Covers EMC+LV directives (including latest version of EN61010)
Regulation 31
Drinking water approval: Complies to DWI Regulation 31(4)(b)
Additional tests: BS6920 parts 2.2 and 2.4 on all wetted parts

EMC
Meets requirements of IEC61326 for an industrial environment
