Flexible conduit end piece

For pipe endings in concrete casting

The flexible conduit end piece is used on the end of plastic piping in concrete elements.

One end of the end piece is black, which can be used for color coding when piping leads to a box on the back side of the element. Piping is continued with pipe of the same diameter (Ø20 mm)

The conduit end piece is equipped with a locking connector and a red protective cap at one end. Made of halogen-free material (IEC/61249-2-21).

Conduit end piece in the front surface of the prepared element.
