

High performance Modbus multivariable pressure transmitter 266JST

ABB's 266JST multivariable pressure transmitter (MVPT) is designed for high accuracy during flow measurement, over full temperature ranges. The 266JST's accuracy of $\pm 0.04\%$ of value from 5 to 100 % of a fully calibrated span makes it the most accurate MVPT on the market. The electronic design and component selection along with an extended characterization processes and factory calibration, results in this transmitter's high performance. **Measurement made easy.**
