What’s New Painting PowerPac 5.13.02

New Functionality in Painting PowerPac 5.13.02

Cycle Time report

The cycle time reports feature shows in the form of a gantt chart, the information about the time taken for operations such as program execution, material change etc., for all the running paint robots in the cell.

Information about tasks that execute in parallel and idle times can be inferred apart from the complete time taken for the operation.
