

Distribution transformer components

Product guide

Bushings

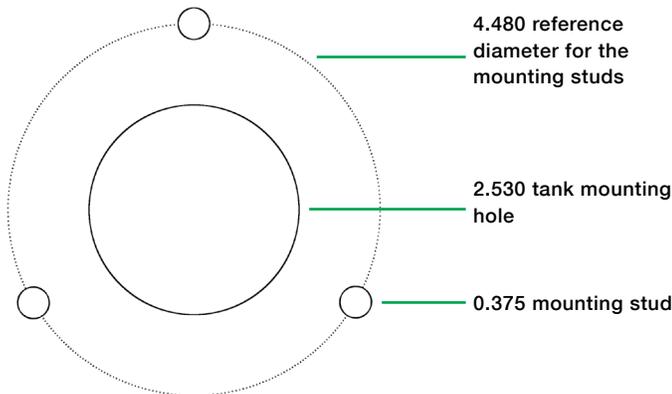

ABB offers both high voltage and low voltage bushings designed for use in pad or surface mounted transformers. The bushings insulate the current carrying conductor from the tank, allowing for termination of both the airside conductor and the transformer leads. Both the high and low voltage bushings have been designed to conform with ANSI/IEEE standards.

ABB high voltage bushing wells are molded from a glass-reinforced, high temperature nylon (HTN) resin. They are designed to mate with all bushing inserts conforming to the appropriate sections of IEEE 386-2006. In addition to the fixed stud bushing well, ABB offers a removable stud version.

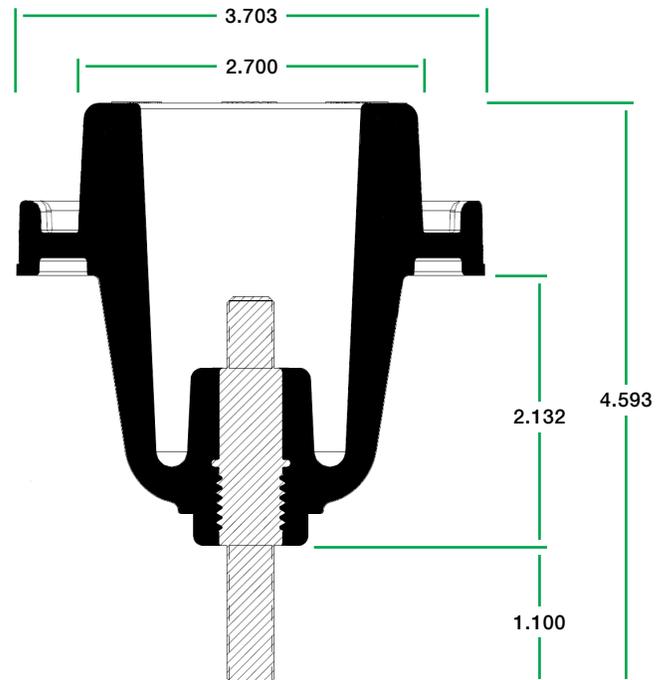

ABB one inch and five-eighths inch low voltage bushings are molded from a glass-reinforced, high temperature nylon resin. The 1.25 inch low voltage bushings are molded from a polyester resin. All of the low voltage bushings provide a spade terminal for internal connection and a threaded stud for external connection.

High voltage bushing well options	BIL (kV)	Continuous current (A)	Package quantity	Part number
Integral copper stud	150	200	48	1ZUA276301-AKC
Removable copper stud	150	200	48	1ZUA276301-AKD

Fuse holders

ABB offers two types of fuse holders - the Type K™ and the DO-III™ fuse holder. Both fuse holders are designed for use in pad-mounted transformers. The fuse holders are available in a variety of ratings and configurations which are detailed on the next few pages.

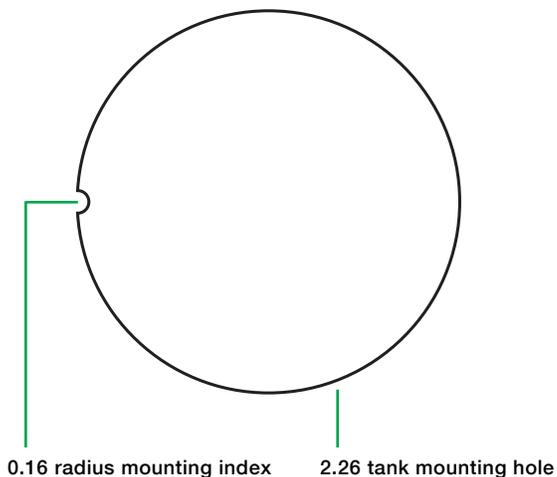

The ABB DO-III fuse holder is a draw-out, load-break expulsion fuse holder. It is intended to protect the distribution system in the event of an internal transformer fault, secondary fault, or severe overload when used with properly coordinated expulsion fuses. The DO-III fuse holder is designed for use at voltages up to 23 kV (line-to-ground) and 150 kV BIL.

The fuse holder works in conjunction with ABB DO-III fuse links which can be found on page 6 of this guide.

DO-III fuse holder standard options

The Type K current limiting fuse canister provides an air-insulated receptacle for general purpose current limiting fuses used in pad-mounted or submersible transformers such as the Hi-Tech Trans-Guard™ FX fuse. The Type K fuse holder features dead front construction, hermetic sealing, self-aligning spring contacts and stainless steel, corrosion-resistant components. Additionally, the canister can be welded or clamped onto the transformer tank.

The Type K fuse holder allows the operator easy access to the current limiting fuse for inspection or replacement. The table below provides the maximum fuse dimensions suitable for use in the Type K canister.

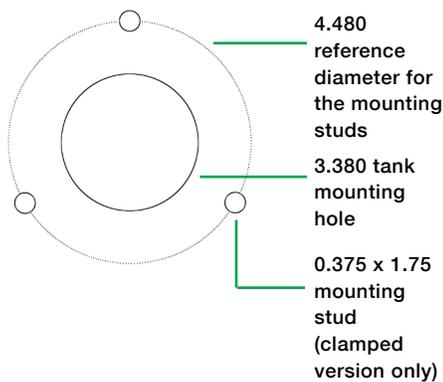

Voltage class (kV)	Maximum diameter A	Maximum length B	Terminal length C	Terminal diameter D
8.3	2.25	10.2	1.05	0.625
15.5	2.25	14.4	1.05	0.625
23	2.25	17.3	1.05	0.625

The Type K canister is available in three different voltage classes and is either welded into place or clamped.

Type K canister options				
Voltage (kV)	BIL (kV)	Package quantity	Part number - welded	Part number - clamped
8.3	95	24	4260079-904	4260079-901
15.5	125	24	4260079-905	4260079-902
23	125	24	4260079-906	4260079-903

Fuses

Safety, including the protection of people and property, is at the forefront of today's business. Fuses offer a simple and cost effective solution to some of the risk associated with electric distribution. The fuses listed in the next few pages are intended for use under oil in distribution equipment.

ABB offers a variety of expulsion fuses. Both ABB protective links and draw-out fuses offer protection to the distribution system should an internal transformer fault occur. ABB's draw-out expulsion fuses also offer some protection for overload and secondary faults. Isolation links, though not true fuses with an interrupting rating, are used to protect those who work on transformers from connecting into a faulted circuit.

ABB draw-out fuses are designed for use in ABB's DOIII type fuse holder, but are interchangeable with most draw-out fuse holders on the market today. These fuses are available in three different configurations for a wide array of current ratings. The draw-out fuses are generally limited to 24.94 kV line-to-line grounded Y. However, when paired with a current limiting fuse the voltage rating can be extended slightly.

ABB isolation links are not fuses in the sense that they are not designed to interrupt current. However, isolation links are intended to be used in conjunction with draw-out expulsion fuses to prevent the unintentional re-energization of a faulted transformer. In the table below use the current rating and fuse type to locate the needed draw-out expulsion fuse and associated isolation link part numbers in the right two columns.

Draw-out fuses				
Current rating (Amperes)	Fuse type	Package quantity	Draw-out fuse part number	Optional isolation link part number
6	current sensing	20	1B11143G04	1C11130G01

The ABB protective link is an oil-immersed, expulsion type fuse designed for use in the high voltage circuit of distribution equipment. Protective links are available in a variety of fuse sizes and voltage ranges up to 34.5 kV line-to-line grounded Y. In most applications today, the protective link is used in series with a partial range or back-up current limiting fuse such as the Hi-Tech Trans-Guard™ family of current limiting fuses.

The standard offering for the 15 kV protective link featured below includes a long lead. This product is also offered with a short lead or for block mounting. Please contact ABB for details.

Switches

ABB distribution transformer tap changers and dual voltage switches are de-energized, rotary type switches suitable for use in both pole and pad-mounted transformers. Tap changers are available that can handle up to 200 kV BIL and 150 amps, while dual voltage switches are available that can handle up to 125 kV BIL and 150 amps. The switches are configurable with many options including the number of decks, termination choices, handle styles, and dial plate designations. These switches were designed and tested in accordance with IEEE standard C57.12.00-2000.

ABB distribution tap changers and dual voltage switches feature a wide range of configurations. To select a standard switch, please refer to the following tables and locate the appropriate ratings and requirements.

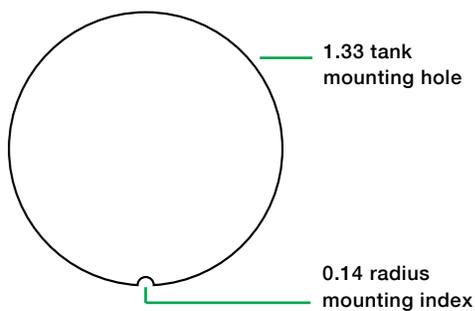

For other configurations not listed in these tables, please contact your ABB representative.

Switches

The ABB LBOR-II switch is a manually operated, two position, load make or break, oil immersed, rotary switch. It is designed for use with distribution transformers (pad-mounted or submersible) and self contained distribution switchgear.

With a smaller mounting envelope than most switches on the market today, the LBOR-II switch has been designed to save you money. The reduced envelope allows for smaller equipment that requires less oil and steel to manufacture.

ABB LBOR II switches feature a wide range of configurations. To select a switch, please refer to the tables below and locate the appropriate ratings, then select a style number for the required mounting configuration. If interlock hardware kits are required for a nut mount switch, please order the suitable style without hardware and add the interlock hardware kit, style 3A33949G02.

For non-standard configuration options that are not listed in these tables, please contact your ABB representative.
