

Making your world turn efficiently without wasting energy.

Some 65 percent of all the electricity consumed by industry is used by motor-driven applications such as pumps, fans, mixers, compressors and extruders.

www.abb.com/energyefficiency

That is why ABB has developed some of the most energy-efficient motors in the world. Many of these motors benefit from the use of variable-speed electric

drives, further reducing energy bills by 20 to 60 percent. Why not join in and turn your world into a more energy-efficient place, call ABB.
