Switching Sequence/Omkopplingsförlopp

Reversal of switching dir.: The contact arms will be at rest during the first operation. The switching is performed by means of the diverter switch only.

Växling av omkopplingsriktn.: Kontaktarmarna står stilla under första manövern och omkopplingen utförs enbart medelst lastkopplaren.

From even to odd positions: Contact arm V moves one step, after which the diverter switch contacts operate as follows: v opens, y closes, u opens and x closes.

Från jämna till udda lägen: Kontaktarm V flyttar sig ett steg, varefter lastkoppl. kopplar: v bryter, y sluter, u bryter och x sluter.

From odd to even positions: Contact arm H moves one step, after which the diverter switch contacts operate as follows: x opens, u closes, y opens and v closes.

Från udda till jämna lägen: Kontaktarm H flyttar sig ett steg, varefter lastkoppl. kopplar: x bryter, u sluter, y bryter och v sluter.

Coarse/Fine-Switching: When switching from pos. 12 to 13 and from pos. 12 to 11 the change-over selector R moves simultaneously with contact arm V.

Grov/Fin-koppling: Vid omkoppling mellan läge 12 och 13 samt läge 12 och 11 växlar omkopplaren R läge samtidigt med att kontaktarm V flyttar sig ett steg.
