T317
Foundation Fieldbus Device Management

The goal of this course is to learn the planning, configuration and commissioning of automation solutions with FOUNDATION Fieldbus devices in the Extended Automation System 800xA.

Course type and methods
This is an instructor led course with interactive classroom discussions and associated lab exercises. Approximately 50% of the course is hands-on lab.

Student Profile
This training is targeted to application and instrumentation engineers, commissioning and maintenance personnel, service engineers and system integrators.

Prerequisites
Students should have attended either the Basic Configuration course T314 or the Engineering course T315 or have knowledge and experience associated with the content of these courses.

Course objectives
Upon completion of this course the participants will be able to:
- Explain the fundamentals of fieldbus technologies especially FOUNDATION Fieldbus
- Design and plan the topology of a System 800xA with FOUNDATION Fieldbus devices
- Install the required software components and perform post installation steps
- Configure the Ac800M hardware and i/o’s
- Configure and commission FF devices out of the ABB Device Library
- Use Fieldbus Builder for parameterization, diagnostic and simulation
- Use Fieldbus Builder to configure Function Blocks within FF devices
- Use FF data in applications for control, alarms, graphics etc
- Configure FF devices not within the ABB Device Library
- Exchange FF field devices
