

POWER GENERATION

## Power Generation Care

### Cyber security patch delivery

ABB Power Generation Care delivers tested and validated control system security patch updates for power generation facilities.

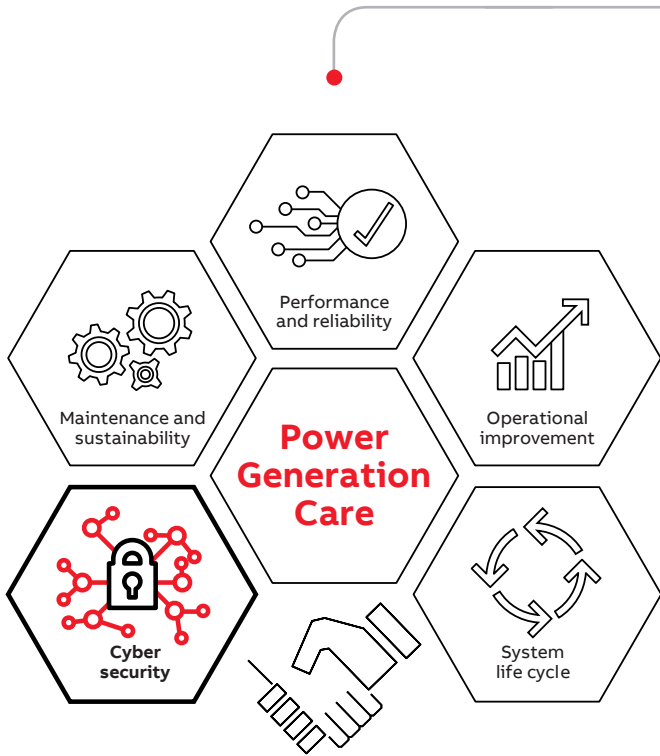

Security has become a major concern for Power Generation owner/operators. ABB understands the need for our customers to maintain a secure, reliable, control environment with minimal time and effort expended.

ABB's cyber security patch delivery service delivers on a monthly basis all validated patches and associated documentation. McAfee VirusScan patches, scan engine and virus definition file updates are included along with ABB's Microsoft security update testing. Information about the latest patch level, scan engine, and virus definition file versions validated are published together with the Microsoft security update test results.

Cyber security patch updates are available as an option with all Power Generation Care levels.

Other security services are available including NERC CIP compliance services, assistance and consultation with update installations, and solutions for automated deployment of system patches through a dedicated server.

# Power Generation Care

The potential impact of a security incident includes endangerment of public or employee safety, loss of production, violation of regulatory requirements, harm to the environment and equipment damage. ABB evaluates all Microsoft security updates for relevance and system compatibility and published validation status as they are released by Microsoft.

## Benefits

- Provides protection from intrusion and malicious software
- Reduces potential for system disruptions due to implementation of maintenance security patches and settings by testing on an off-line system
- Insures security policy compliance with government or corporate objectives
