## COURSE DESCRIPTION

# J131 UNITROL® 1010 / 1020 Service and Commissioning training

### Course goal

UNITROL® 1010 and UNITROL® 1020 provides a comprehensive range of Automatic Voltage Regulators and is intended for small generators and industrial synchronous machines. The maximum output current for continuous operation is 20 ADC. The most advanced microprocessor technology together with IGBT semiconductor technology allows it to be used in all conceivable areas of application. The course goal is to teach students to operate, maintain and do commissioning as well as trouble shooting of the automatic voltage regulator (AVR).

### Main learning objectives

Upon completion of the course students will be able to operate the system either using the front panel or the PC tool, perform standard maintenance and troubleshooting work and put the UNITROL® 1010/1020 in service

### Participant profile

- Operator and maintenance personnel in power plants and industrial sites
- Test and commissioning engineers
- Application engineers and system integrator

### Prerequisites

Basic knowledge of electronics and power generation  
Basic personal computer knowledge  
– English Level: B1

### Topics

- Basics of the synchronous machine
- Duties of excitation system
- Major components of the UNITROL® 1010 and UNITROL® 1020
  
- The Hardware configurations and parts
  - Control elements
  - Device connections
  - Input/output configuration
  - The main software function of UNITROL® 1010/20
  - Voltage regulator
  - Limiters
  - Power factor and VAR control
  - Droop compensation mode
  - Boost output
  - Synchronization
  - Monitoring and protection
  - Double channel configuration

### Operating aspects

- How to use the local control panel
- Start/Stop sequence
- Commands and Indications
- Field bus communication (Modbus)
- Exercises using the demo equipment
- How to use the PC-tool
- How to install the PC-tool
- How to display signals
- How to change parameters
- How to use the oscilloscope function
- How to configure I/O's
- How to use the event logger function
- How to tune the closed loop controllers
- How to operate the voltage regulator using the PC-tool
- Exercises using the demo equipment and PC-Tool

### Servicing and Faults

- Commissioning aspects
- Trouble shooting
- Maintenance aspects
- Engineering aspects
- Integration of the device into various environments
- System parameters
- Connection diagrams

### Learning methods and tools

- Lectures for introduction
- Practical exercise using demo equipment

### Duration

4 days, Max. 8 participants

Tailor made and on-site training courses on request
