Course description

INMVD–106
ACS 6000 Medium Voltage Drive
Operation and Maintenance

Course goal
The goal of this course is to train the participants in the safe operation, control, configuration, troubleshooting and maintenance of the ACS 6000.

Learning objectives
Upon completion of this course, students will be able To:
- locate the hardware components, to verify and replace drive’s parts and to perform preventive maintenance.
- the use of the available programming and troubleshooting tools is taught by practical operating exercises.

Participant profile
Electricians, technicians and engineers who operate, maintain or troubleshoot the ACS 6000.

Prerequisites
Basic knowledge of AC motors and drives.
Basic knowledge using computers with Windows.

Topics
Generalities
- ACS 6000 family overview, system requirements
- AC motor and DTC control

Hardware description (power electronics & control)
- Component and PCB functions
- Hardware schematics and electrical drawings
- PCB settings and configuration

Water cooling system
- Cooling circuit description
- Preventive maintenance

Operation
- Energize / de-energize the drive, start-stop sequence
- Local operation with drive control panel and Drive Window tool

Software introduction
- Software structure, parameter’s description
- Application configuration, parameter settings

Fault tracing and troubleshooting
- Alarm and fault indications
- Using Drive Window SW tool for configuration and troubleshooting
- Getting help from ABB

Course type and methods
This is an instructor led seminar. The language of the course is English.

Course duration
The duration of the course is 3 days.
Minimum 4 participants
Tailor-made and on-site training on request
