Inside Delta with inline contactor. This will make the contactor \(1^\text{st} \sqrt{3}\) times bigger than if contactor is inside delta connected (diagram 1SF5B36005G5009)

Coil consumption for Inside Delta contactor.

- Pull-in max 15A
- Holding max 1,5A

If the pull-in or holding values are Higher, the Inside Delta contactor must be controlled via an auxiliary contactor.
