Current life cycle status
The mentioned product sub-type of SAMI MEGASTAR W drive is in the Obsolete phase since 01.01.2017 according to the ABB life cycle model outlined above.

Life cycle plan
Although in Obsolete phase by definition no services are available other than end-of-life services, ABB offers the possibility to apply a Control Upgrade Service in order to extend the life cycle support for the installation.

Recommended actions
It is highly recommended to upgrade the drive’s control unit to AMC control platform (refer to Control Upgrade service product description). After this Control Upgrade service the drive installation will return to the Classic phase where complete life cycle services will be available (refer to Life cycle Status Statement of SAMI MEGASTAR W after Control Upgrade (AMC34)).

Alternatively various replacement products are available for SAMI MEGASTAR W (i.e. ACS1000).

Further information
For more information on drives life cycle management and available services contact your local ABB organization or at www.abb.com/drives.

Product availability
Manufacturing of product has stopped and not available for sale.

Service availability
Following services are available
