PCD DIO T2 Module Replacement Procedure

Follow these instructions and guidelines for replacing the PCD DIO T2 module. Call 1-800-929-7947 option 5 or +1-407-732-2510 for this issue or any other questions.

Precautions
The following precautions should be taken when replacing or servicing any of the PCD modules:
1. Remove AC power and DC power from the PCD before removing, installing or wiring any of the PCD modules.
2. Incorrect wiring may result in damage. Before energizing the PCD, verify that the connectors are plugged into the correct locations and the wiring agrees with the connection diagram.
3. Apply only the rated AC control voltage.
4. Due to the nature of electronic components, take care to avoid electrostatic discharge from damaging the DIO T2 card. If available, use an anti-static wristband and ONLY hold the DIO T2 card by the mounting plate, avoiding contact with electronic components on the card.

Instructions
The following instructions contain information required to correctly replace the PCD DIO T2 module:
1. Remove AC and DC system power from the PCD.
2. Locate the module labeled “DIO T2”, which is the second card from the left facing the rear of the PCD.
3. If you have an anti-static shield, place this on your wrist and ground the lead to the cabinet ground stud below the terminal block at this time.
4. Locate the mounting screw in the top center of the DIO T2 module. Remove this screw and set aside.
5. Locate the mounting screw in the bottom center of the DIO T2 module. Remove this screw and set aside.
6. Remove the DIO T2 module from the relay housing and set aside.
7. Carefully remove the replacement DIO T2 module from the packaging and insert into the PCD housing. Be certain to align the printed circuit board with the card guides in the housing.
8. Insert the mounting screws that you have set aside and tighten.
9. Reconnect AC & DC power and the PCD should power up normally.

Call 1-800-929-7947 option 5 or +1-407-732-2510 for any other questions you may have.
