

Purpose and function

The emergency alarm system is highly suitable for basic protection against threats for employees in public buildings and offices.

Each room has two alarms, one on the inside and the other outside the room. When the alarm button is pressed in the room, a warning light is activated outside the room. Nothing happens inside the room. Simultaneously, the alarm is sounded within the other office to alert colleagues that help is needed. The alarm is acknowledged with the reset button in the room. The alarms can also be installed in other areas as necessary.

WIRING: MHS 1 x 4 x 0,5 or NOMAK 2 x 2 x 0,5 or KLM 4 x 0,8
