Consommation à l'appel

Potencia en el arranque

300W/VA

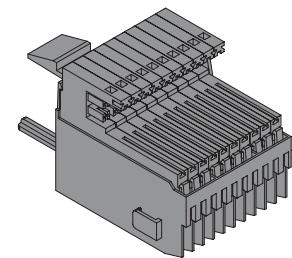

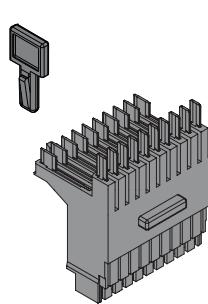

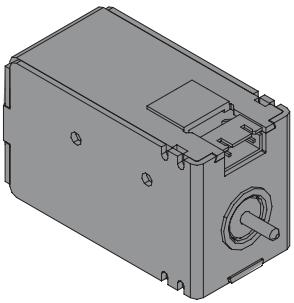

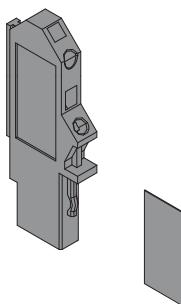

Potenza di mantenimento

Continuous power consumption

Leistungsaufnahme bei Dauerbetrieb 3,5W/VA

Puissance de maintien

Potencia de mantenimiento

OPTIONAL FOR W

- Questo dispositivo è protetto dal surriscaldamento causato da lanci troppo frequenti. In tale condizione l'attuatore si spegne temporaneamente; trascorso un adeguato periodo di raffreddamento, riprende quindi il normale funzionamento. Il circuito di protezione si azzera quando il dispositivo rimane spento o in modalità di mantenimento, per almeno 5 minuti.

- This device is protected against overheating caused by excessively frequent start-ups. In these conditions, the actuator turns off temporarily; after a suitable cooling period it resumes normal operation. The protection circuit is reset when the device remains off or in hold phase for at least 5 minutes.

- Diese Einrichtung ist gegen Überhitzung geschützt, die durch zu häufige Einschaltungen verursacht wird. In dieser Bedingung schaltet der Aktuator sich vorübergehend aus. Nach Ablauf einer angemessenen Abkühlungszeit nimmt er wieder seinen normalen Betrieb auf. Der Schutzstromkreis wird auf Null gestellt, wenn die Einrichtung für mindestens 5 Minuten ausgeschaltet wird oder in der Haltemodalität bleibt.

- Ce dispositif est protégé contre la surchauffe provoquée par des lancements trop fréquents. Dans cette condition l'actionneur s'éteint temporairement; après une période adéquate de refroidissement, il reprend à fonctionner normalement. Le circuit de protection se remet à zéro quand le dispositif reste éteint ou en mode de maintien pendant au moins 5 minutes.

- Este dispositivo está protegido contra los arranques demasiado frecuentes. En esta condición el actuador se apaga temporalmente; transcurrido un período de enfriamiento idóneo, retoma luego el funcionamiento normal. El circuito de protección se pone a cero cuando el dispositivo queda apagado o en modalidad de mantenimiento por al menos 5 minutos.

Il circuito di alimentazione deve essere dimensionato per una caduta di tensione massima del 30% durante la fase di spunto.

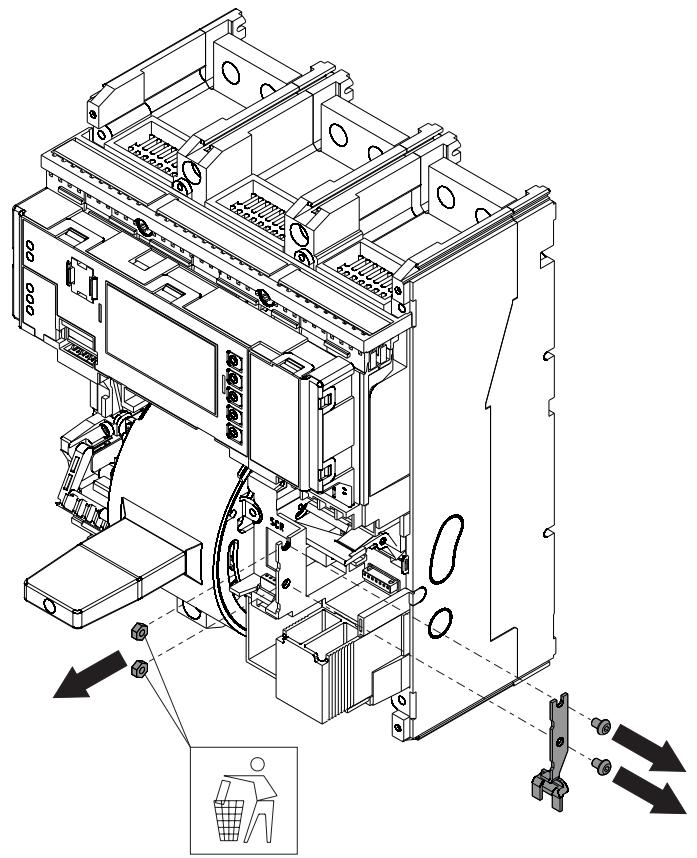

The supply circuit must be dimensioned for 30% maximum voltage drop during inrush phase.

Der Speisestromkreis ist für einen maximalen Spannungsabfall von 30% während der Einschaltphase auszulegen.

Le circuit d'alimentation doit être dimensionné pour une chute de tension maximale de 30% pendant la phase initiale de démarrage.

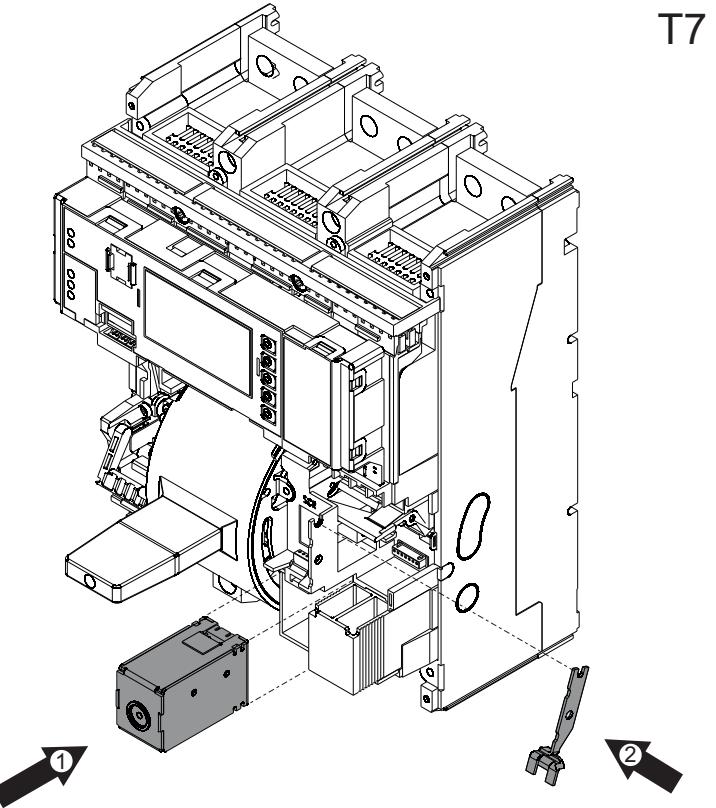

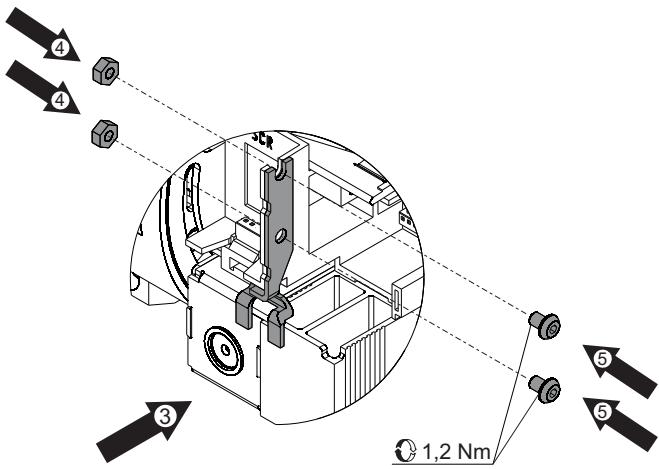

El circuito de alimentación se deberá dimensionar para una caída de tensión máxima del 30% durante la fase de arranque.
