Current life cycle status

The ACS6000 product sub-type of ACS6000 drive is in Active phase according to the ABB life cycle model outlined above.

Life cycle plan

The ABB life cycle management model is designed to manage an orderly transition to new replacement products or to choose from various lifetime extending services. At the same time the model ensures access to continuing support for our customers.

ABB will adequately inform about life cycle phase transition from Active to Classic phase prior to change. It is planned to keep this product sub-type in the Classic phase for approximately 10 years once it has been transferred to Classic phase.

Recommended actions

In Active phase complete life cycle services are available for the mentioned product sub-type. Besides the regular maintenance it is recommended to check the possibility for Option Upgrade service in order to respond to specific customer needs and/or changed process requirements.

Further information

For more information on drives life cycle management and available services contact your local ABB organization or at www.abb.com/drives.
