Application and benefits
ABB’s Hydraulic Mechanism Flushing Kit provides a simple and efficient way to remove any contaminate particles from the hydraulic fluid. The flushing kit is for use with the HMB-S mechanisms. Flushing, or cleaning, the mechanism’s hydraulic fluid improves the operation of the change over valves and can prolong the life of the mechanism.

Kit description and part number
ABB’s Hydraulic Mechanism Flushing Kit contains the necessary hoses, fittings, hydraulic fluid sight glass reservoir and pump for connection to the mechanism and performing the flushing process. The flushing kit part number is 5863B80G01.
