

ABB releases new generation of Modular Pilot Devices

The new generation of Modular Pilot Devices includes pushbuttons, selector switches, emergency stops and pilot lights designed for customers with high demands and need of flexible solutions.

ABB, the leading power and automation group has launched a new generation of the Modular range, Pilot Devices. The modular operators and pilot lights are a competitive choice for customers with high demands and need of flexible solutions with few components.

ABB has a century long experience in design and development of pilot devices for tough environments. The functionality and feeling are essential parts in the design of the new competitive product range.

The new generation of Modular range keeps the same robust design and high degree of protection as the earlier generations. They do, of course comply with most important national and international standards. The low built-in depth (48,5mm) saves space and the self-cleaning contacts guarantee high functionality and mechanical durability even in tough environments (IP66, UL 4X, 12 and 13).

Contact blocks are easily and simple assembled on a safety holder and after that snapped on to the actuator. The new generation is easy to identify due to the new grey color on all parts on the backside.

The pilot devices are available in a wide range of colors and functions. Pushbuttons, mushroom pushbuttons, selector switches and key operated selector switches (2 and 3 positions), toggle switches, and emergency stop pushbuttons. Illuminated or non illuminated, with bezel in black plastic or chrome plastic or metal.

The final step with the new range is the new adaptation of the enclosures that are available with 1, 2, 3,4 and 6 seats. Ready for DIN rail mounting of contact blocks and cable connecting with M and Pg thread.

The Modular range can easily be combined with the ABB's Compact range. The two ranges have the same front design and the same accessories can be used for both.

The new generation of Modular range will save you worries, stock keeping, space, problems, time and in the endmoney.
