

ABB ROBOTICS, CONSUMER SEGMENTS & SERVICE ROBOTICS

Robotic Depalletizer

ABB's ultimate solution for faster and simpler depalletizing

ABB Robotic Depalletizer

How it works

How the solution works:

1. The vision sensor detects boxes on the presented **pallet**
2. The machine vision software determines the most optimal **grasping point per box** which is sent to the **robot**
3. The robot picks the detected box according to provided grasp point and places it on **the conveyor**

Problem: Complexity increases with a varying mix of boxes to be depalletized. Legacy solutions are not easy to adapt towards changes in pallet patterns or box sizes in worst case requiring overhaul or re-integration.

Solution: The ABB functional module for mixed case depalletizing solves this problem by using advanced machine vision and software.

Robotic Depalletizer

Benefits

Our solution aims to support customers in logistics, e-commerce, consumer packaged goods, retail and healthcare in maximizing throughput and managing complexity thanks to an automated module:

**EASY TO
INTEGRATE**

3 modular configurations
fitting a wide range of
customers cases

**ONE SKILL FITS
ALL**

Unique solution:
depalletizing various
pallet patterns, product
mix, size and height

**EASY TO
OPERATE**

Pre-configured software:
ready to be connected
with customers' control
software

Robotic Depalletizer – Value add options

Robotic Depalletizer Standard

Mixed Robotic Depalletizer:

- for pallets up to 2.8 m high
- fully fledged system capable to depalletize mixed, single SKU and rainbow pallets
- vision sensor & software for reliable detection of single SKU and rainbow pallets
- fully integrated hardware and software solution with modular design

Performance up to 750 pph!*

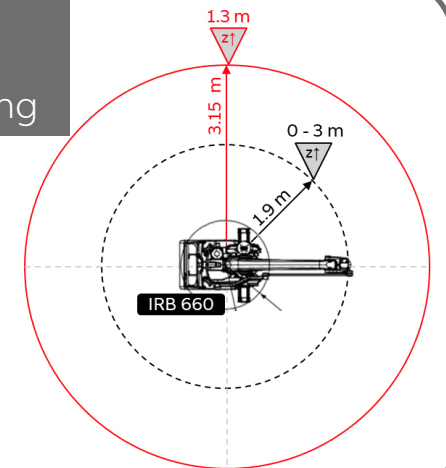

Option 1

- ✓ Lower vertical reach
- ✓ Higher payload depalletizing

Option 2

- ✓ Higher horizontal reach
- ✓ Higher payload depalletizing

*pph=pieces per hour, depending on customer case

Robotic Depalletizer

Characteristics

FLEXIBLE GRIPPER

12 suction cups divided into 6 dynamic suction zones

Capable of picking various product types and sizes

Modular

NO PROGRAMMING

Module configuration < 3 days
(Vs. usual robot programming taking multiple weeks)

Easy to integrate into any level of automation landscape

MINIMUM FOOTPRINT

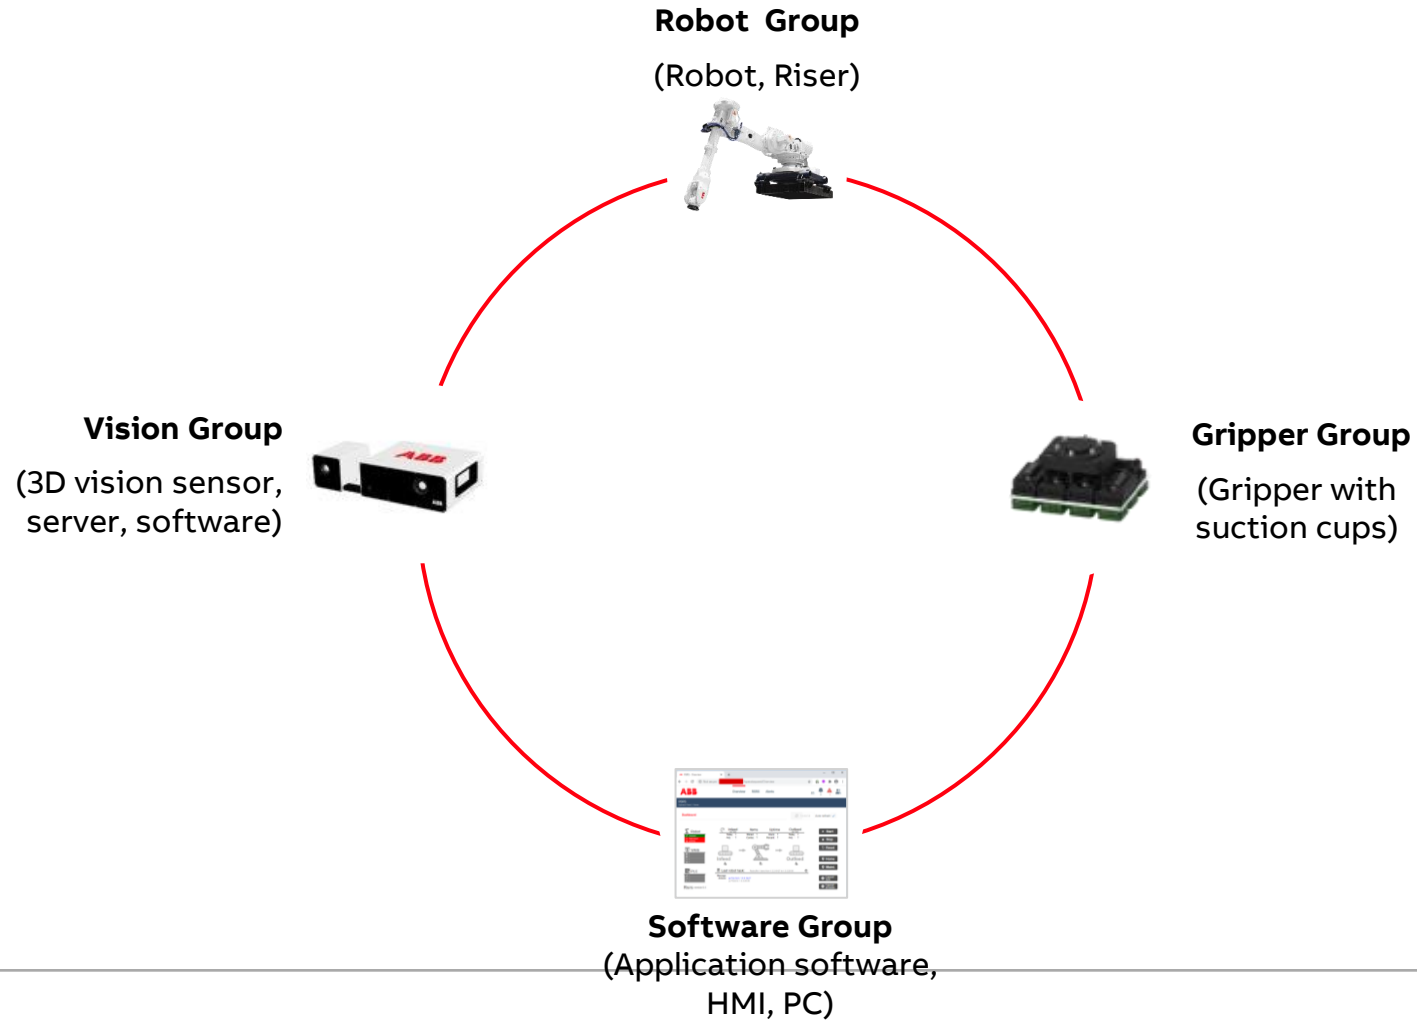

10-<15 m²

Less space and investments vs. traditional automation

Singulation & depalletization at once

Robotic Depalletizer

Components Groups

ABB's Technology

**Enabling
Efficient
Autonomous
Operations**

ABB 3D VISION TECHNOLOGY

DEPALLETIZING EVEN UNSTRUCTURED PALLET PATTERNS

Recognition of mixed boxes with varying dimension, weight, shape and material

DUAL VISION SYSTEM (OPTION)

NO PAUSE

Dual depalletizing

Up to 2 vision systems

MACHINE LEARNING

MAINTAINING OPERATIONAL EXCELLENCE

Ready to adapt to changes

ABB
