ABB Ability™ Smart Device Manager 2.1

Device management
made easy

Introducing ABB Ability™ Smart Device Manager 2.1

Safety & house keeping

No matter where you are, please:

- Be aware of your surroundings
- Know the local emergency procedures
- Understand the escape routes
- Do not delay exiting the area
- Help visitors and people with special needs to exit safely
- Meet at a designated muster point to be accounted for

If driving, please follow local country rules for safe operation of a motor vehicle:

- Where allowed, participate hands-free
- If you need to hang up, please note we will be recording and distributing the webinar after the series has been completed
- Webinar recording will also be published on myLearning

Agenda

- Field Device Management
- Introduction to SDM2.1
- SDM Journey
- Technical Insights
- Value proposition
- Key Benefits
- Offering & Ordering tool
- Contact

Field Device Management Challenges

Smarter Devices means more connected devices hence more data

How can I visualize and interact with the data easily? How to transform the data in knowledge to reduce operational and maintenance costs?

How to drastically reduce the efforts for device commissioning

How to reduce errors and efforts when configuring devices ? How to support automated configuration of these smart devices ? How to configure these efficiently ?

Mobile workforce means more software flexibility

How can a single software support different needs of different field users ? How to ensure compatibility to any hardware of field devices.

Large installed base of legacy devices calls for standardization

How to ensure compatibility of legacy devices and new devices? How to embrace new FDI standard and unleash its potential?

ABB Ability™ Smart Device Manager 2.1

Customer's key requirement

- **USABILITY!** No guideline, no training, just device management.
- Request data access to the wealth of data from intelligent devices.
- Request to integrate a bunch of vendors and devices in one application.
- Request a tool replacing application specific handheld terminals.
- Need to exchange these data platform independently.
- Need to manage devices of the newest generation – based on FDI device packages - as well as the installed base – based on EDD.
- Need to manage locally on the device, in the control cabinet and in the workshop.
- Need to drastically reduce the efforts for device commissioning.
- Need standardization of Large installed base of legacy devices

15 JANUARY 2005

ABB Ability™ Smart Device Manager 2.1

The ABB Ability™ Smart Device Manager is the next generation Handheld Configurator with FDI based device management and is equipped with high-performance rugged tablet with innovative graphical user interface that helps field engineers to effectively work with the process instrumentation.

SMART DEVICE MANAGER

device technology

ABB Ability™ Smart Device Manager 2.1

What's new?

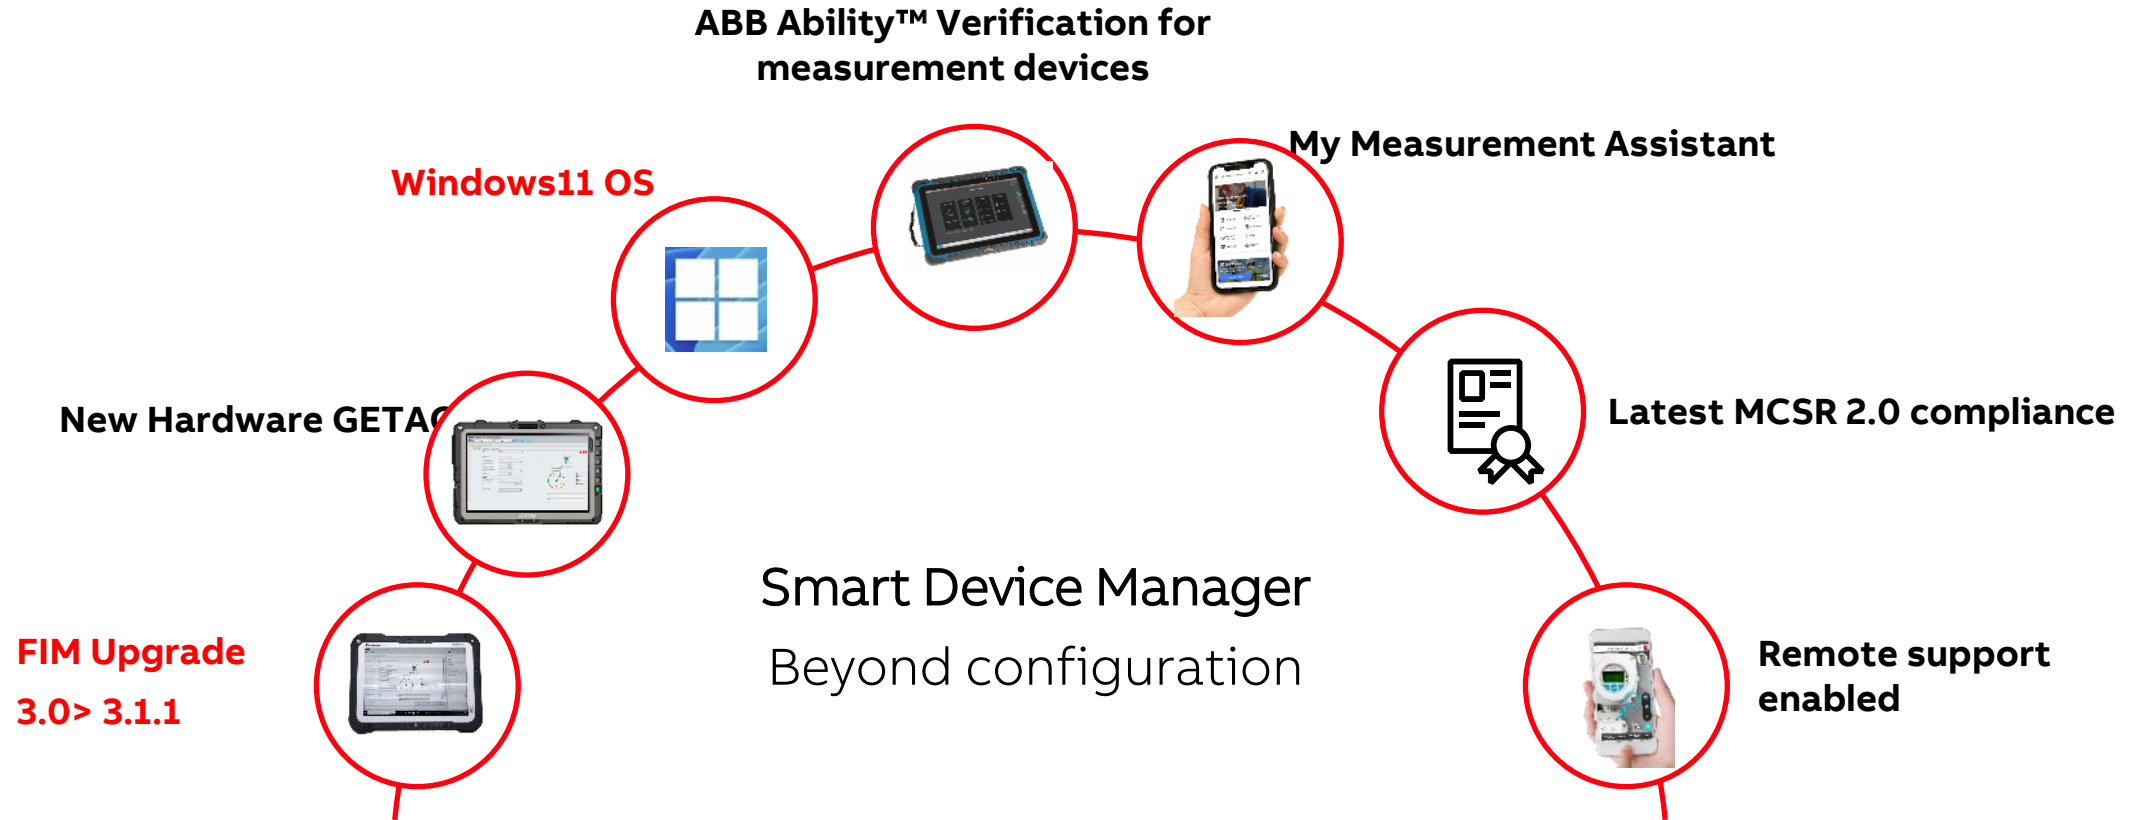

ABB Ability™ Smart Device Manager 2.1

Fully Rugged Next Generation Tablets for best-in-class field experience

General Purpose Handheld Configurator – STANDARD

- Fully Rugged Tablet 10.1inch FHD Lumibond® display with Getac sunlight readable technology (1,000 nits) and capacitive touchscreen
- 10.1" Wide Viewing Angle TFT LCD WUXGA (1920 x 1200) Protection film
- Quad-Core processor for rough environments Rugged body with 6ft (1.8m) drop resistant.
- Windows 10 and above operating systems
- Versatile I/Os connectivity including Thunderbolt™ 4
- Up to 6-8 hours battery life with user replaceable battery

General Purpose Handheld Configurator - PREMIUM

- Rugged Tablet 10.1inch WUXGA 1920 x 1200 LED-backlit screen with 10-point capacitive multi-touch + digitiser electronic stylus pen; anti-reflective and anti-glare screen treatments
- Engineered to withstand drips, drops, dust and grime TOUGHBOOK® computers thrive and survive in the hardest of environments
- Windows 10 and above operating systems
- Semi-rugged body with multiple 1.2 m drops to concrete and IP65 sealing providing protection from dust and water splashes
- Up to 6-8 hours battery life with user replaceable battery

ABB Ability™ Smart Device Manager 2.1

Functional design for the best-in-class field experience

Intuitive user interface for easy navigation and data interpretation

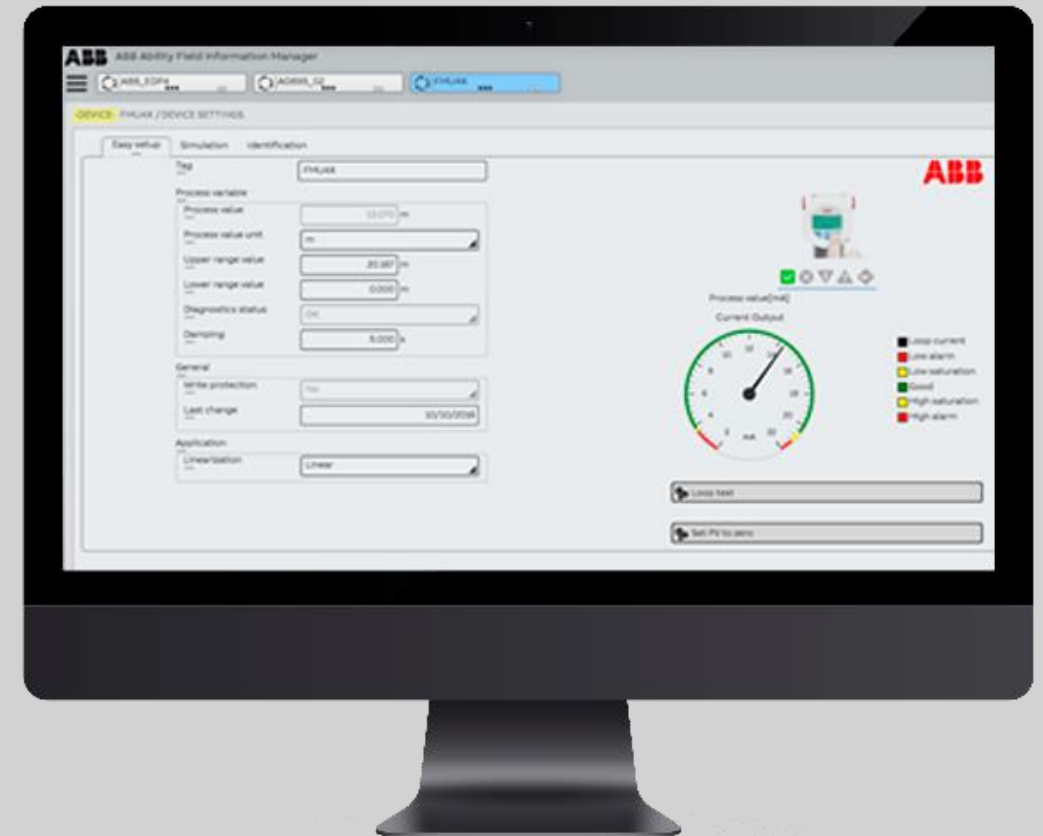

- Same look and feel - The Device menu options can be accessed always in the same way, irrespective of the device make & model
- Native touch navigation or normal PC navigation (mouse, keyboard)
- The UI supports multiple device views allowing the user to switch the view of the devices in a simple manner and manage multiple devices in a more efficient manner

Flexible and simple architecture

- STANDARD or PREMIUM editions - use it as you prefer
- Quick to start – installs on Windows tablets and workstations, scans, identifies & enables access to device within 3 mins

Connects to Online drivers repository – eliminates the trial & error search of Device drivers

- ABB Device Driver cloud
- FieldComm Group Device Driver cloud
- Offline repository support

Functional design for the best-in-class field experience

Intuitive user interface for easy navigation and data interpretation

The image displays the ABB Field Information Manager - Simulator interface, which is designed for intuitive navigation and data interpretation. The interface is divided into several sections, each with specific functionality highlighted by red callouts:

- Device Bar - Multi-device management:** Located at the top right, it provides a quick overview of the system's status and allows for multi-device management.
- Device Info:** A central panel displaying detailed information about the selected device, including its tag, process variables, and diagnostic status.
- Device Health (NAMUR):** A section showing the health status of the device, including a visual indicator for the process value and a legend for various alarm conditions.
- One Click functions:** A set of buttons at the bottom right that allow for quick execution of common tasks, such as "Loop test" and "Set PV to zero".
- Typical parameters:** A list of parameters on the left side of the interface, which can be used to configure the device's operation.
- Topology Navigation:** A section on the far left that provides a visual representation of the system's topology, allowing users to navigate between different components.
- Touch enabled:** A callout indicating that the interface is designed for touch input, with a grid of buttons for various functions.
- One click Device menu:** A callout pointing to a button that provides quick access to the device's settings and configuration options.
- Customizable Favorites:** A section on the right side of the interface that allows users to customize their favorite parameters and settings for quick access.
- different Parameters by device:** A callout indicating that the interface is designed to display different parameters for different devices, ensuring that the data is relevant to the user's current task.

Functional design for the best-in-class field experience

Flexible and simple architecture

INSTALL WHERE NEEDED

ENGINEERING
STATION

FIELD TABLET

CABINET
PANEL

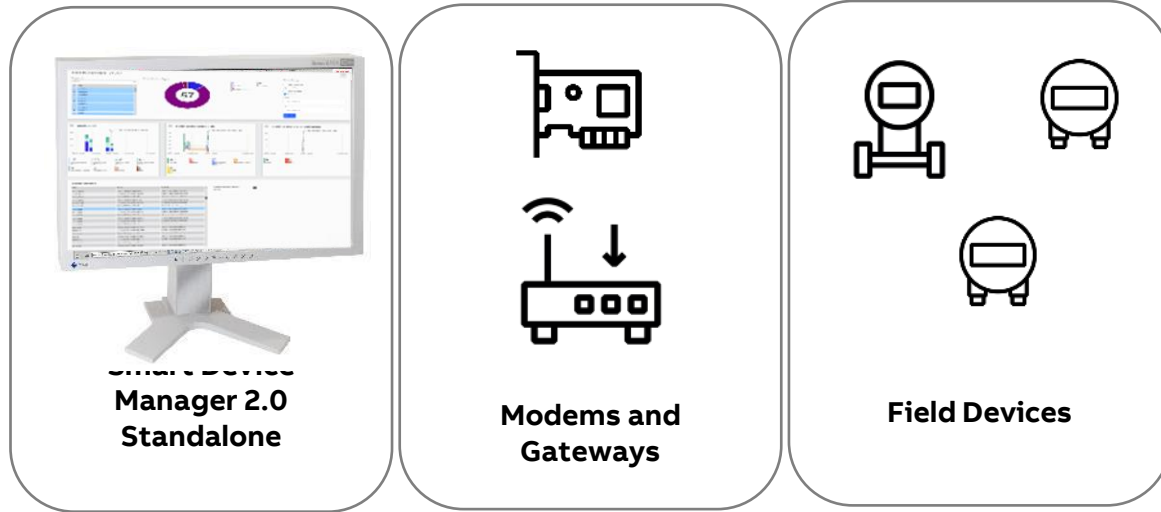

ANY MICROSOFT
WINDOWS 10
DEVICE

installs on Windows tablets and workstations, scans, identifies & enables access to device within 3 mins

Functional design for the best-in-class field experience

Standalone or Hand-held - use it as you prefer

STANDALONE

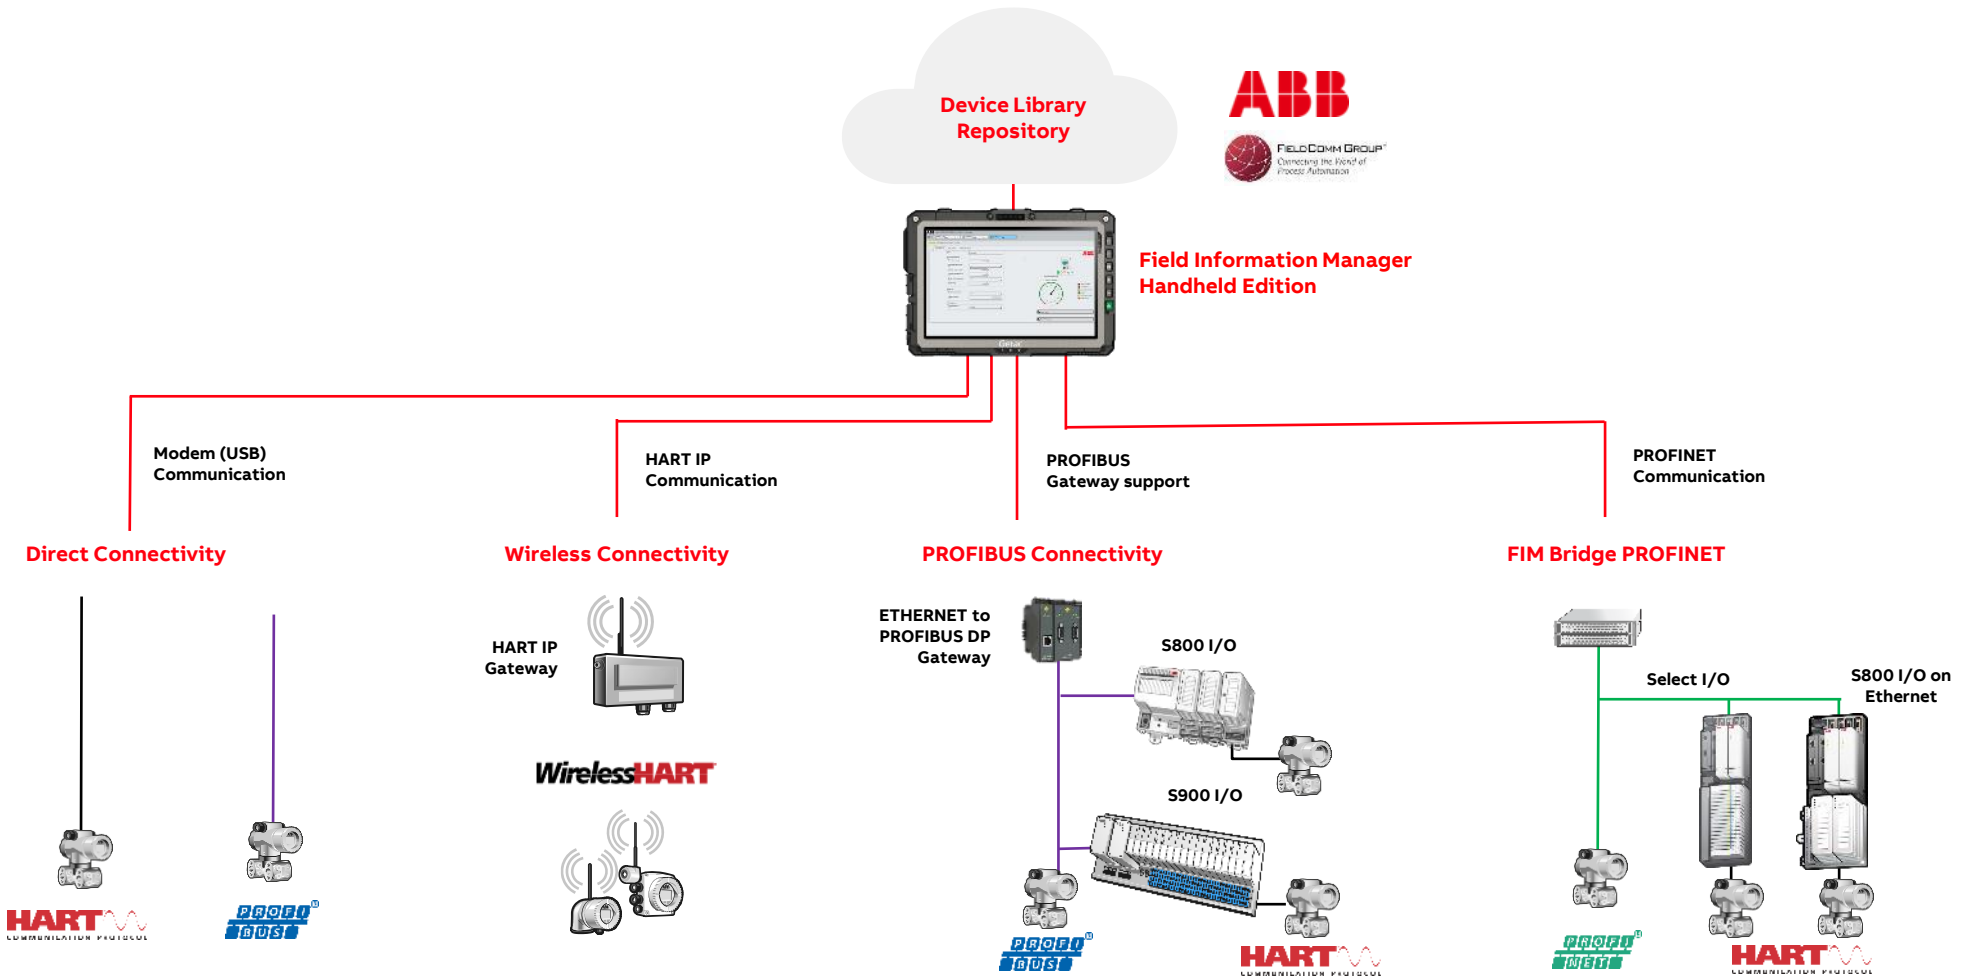

HAND-HELD

Smart Device Manager 2.0 as standalone may access the data of the field devices through different Modems and Gateways.

ABB Ability™ Smart Device Manager 2.1

Standalone – Direct connectivity to Field – FIM on Windows Tablet

Functional design for the best-in-class field experience

Connects to online drivers' repository

ABB DEVICE DRIVER CLOUD

Smart Device Manager 2.0 finds the matching driver from the ABB Cloud repository, downloading it securely and assigns it to the device automatically.

FIELDCOMM GROUP DEVICE DRIVER CLOUD

Smart Device Manager 2.0 finds the matching driver from the FieldComm Group cloud repository, downloads it securely and assigns it to the device automatically.

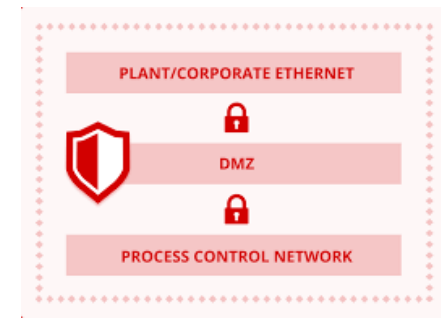

FIELDCOMM GROUP™

*Connecting the World of
Process Automation*

OFFLINE REPOSITORY

Device Types can be downloaded in DMZ environment & moved to production Smart Device Manager 2.0

- Allows to have own on-premise controlled device catalog.

Smart Device Manager 2.0 provides updated drivers on-demand

Supporting latest field device technology

Wide range of Field protocols support

Smart Device Manager 2.0 supports many different fieldbus protocols

Support for HART 5, HART 6
and HART 7 devices

Support for Profibus
DP/PA devices

Support for Profinet
devices

Support for OPC UA Field
devices – At additional cost

ABB Ability™ Smart Device Manager 2.1

Value propositions

INTUITIVE

Functional design for the best-in-class field experience

- **Intuitive user interface** for easy navigation and data interpretation
- **It can be used in an Engineering station, in the Field, back of the panel or in maintenance workshop**
- Quick to start – installs on Windows tablets and workstations, scans, identifies & **enables access to device within 3 mins**
- Connects to Online drivers repository – **eliminates the trial & error search of Device drivers**

EFFICIENT

Built for engineering efficiency

- Compare instrument configuration to various sources of project data for early detection and correction of errors
- Individual and **bulk handling of dataset of smart field devices.**

FUTUREPROOF

Supporting latest field device technology

- **Leverages FDI technology**, which combines the simplicity of EDD and information richness of DTM
- supports wide range of field protocols as **Profibus, HART, HART IP, Profinet and OPC UA**
- supports both **legacy DDs and new FDI packages**; i.e., one tool for existing and new devices
- **Fleet monitoring solution** for all Field instruments in the plant.

ONE DEVICE

Supports ABB Digital Instrumentation Solutions

- Beyond configuration
- Multipurpose Windows hardware
- Latest Windows OS support
- ABB Ability SRV500 Verification Tools
- ABB Ability My Measurement Assistance
- Cyber secured – meets latest ABB's Minimum Cyber Security Requirements.
- Remote Support
- **Independent of customer IS Policies & IT support**
- **Ease of User access controls**

ABB Ability™ Smart Device Manager 2.1

Key Benefits

- It is the 1st FDI-based host in the market fully embracing the FDI Common Host Components.
- Works with latest windows OS, meeting all windows security requirements.
- initiates a paradigm change for configuration and parametrization of Fieldbus devices.
- employs innovative & far superior ease of use features, user-friendliness & exceptional navigation features.
- makes configuration, commissioning, diagnostics and maintenance of field instrumentation faster and easier than ever before.
- scans, identifies and enables access to the device within 3 minutes.
- enables online and offline parametrization, documentation of parameters and settings and creation of standardized templates.
- Universal configurator for all ABB/non-ABB field devices including legacy support.

ABB Ability™ Smart Device Manager

Device management made easy

ABB Smart Device Manager is a device management tool that fully embraces the Field Device Integration (FDI) Common Host Components. It makes the configuration, commissioning, diagnostics and maintenance of fieldbus instruments easier and quicker than ever before.

ABB's Smart Device Manager software employs FDI technology and is equipped with high-performance and innovative graphical user interface that helps technicians to effectively work with the process instrumentation.

Features

- **Efficient & productive** - innovative high-performance graphical user interface
- **Easy bulk device configuration** of HART and PROFIBUS devices from a central location, enabled via device connectivity through System 800xA
- **Asset management opportunities** enabled via connectivity to ABB Ability™ through OPC UA
- **Ease of use & navigation** - FIM's Device Bar allows the user to easily access all open devices
- **Compatible with installed base** - supports both legacy DDs and new FDI packages; i.e. one tool for existing and new devices
- **One tool for all needs** - can be used in the Engineering station, in the Field, back of the panel or in maintenance workshop
