Switching Sequence/Changeover Diagram

The switching sequence is as follows:

1. The switching is performed by means of the directional switch only.
2. Contact arm moves one step, after which the directional switch operates as follows: open, close, open, close, open, close.
3. Contact arm moves one step, after which the directional switch operates as follows: open, close, open, close, open, close.

The contact arm moves one step, after which the directional switch operates as follows: open, close, open, close, open, close.

From these positions, the switching direction can be changed.
