ABB’s new LMT Series of magnetostrictive level transmitters’ principle of operation and simple setup ensure level and/or interface are always measured reliably and accurately, minimizing downtime and maximizing process efficiency and profits.

The K-TEK Level products are designed for all industry applications and provide a safe alternative to other technologies. Whether the device is externally mounted as the LMT200 or mounted inside a vessel as the LMT100, the device provides safety features that competitors simply do not have.

Change the way you perform level measurement with the new LMT, it is measurement made easy!
