

MineScape Plot Designer

An easy-to-use and functionally-rich interface to create professional graphical design output without leaving MineScape.

The features

Integrated

Accesses data from MineScape via design, triangle or wireframe data.

Convenient

Create plots through the plot design functions. All MineScape CAD functions are available in Plot Designer, so last-minute edits are simple and easy.

Templates

Create and save frequently-used plot layout schemes to be reused at any time.

Graphical data link

Design information in the plot is linked to the source data. If the graphical data changes, the plots are automatically updated and can be easily reprinted.

Intuitive

Creating plot layouts is easy using specially-designed toolbars for creating, moving, and resizing the plot viewports. Drag-and-drop and checkbox functions enable users to easily assign their design graphics to the correct space in the plot.

The benefits

Integrated with MineScape CAD, enabling users to quickly create professional output of 3D plots without leaving the MineScape mine planning system.

3D PDF output provides a convenient way to share 3D designs with anyone who has access to Adobe Reader version 9 or later.

Graphical data is linked, so plots do not need to be recreated when the graphical data changes; simply resend the plot to the plotter or to PDF.

About ABB's Enterprise Software product group

We provide industry-leading software and deep domain expertise to help the world's most asset-intensive industries such as mining, energy, and utilities solve their biggest challenges, from plant level, to regional network scale, to global fleet-wide operations.

Our enterprise software portfolio offers an unparalleled range of solutions for asset performance management, operations and workforce management, network control, and energy portfolio management to help customers reach new levels of efficiency, reliability, safety and sustainability. We are constantly researching and incorporating the latest technology innovations in areas such as mobility, analytics and cloud computing.

We offer unmatched capabilities to integrate information technologies (IT) and operational technologies (OT) to provide complete solutions to our customers' business problems.
