UFES™
Ultra-Fast Earthing Switch

Active internal arc protection for low and medium voltage switchgear

- Protects operators and investments
- Minimizes downtime and damage on equipment
- Reduces costs related to arc fault impacts
The active arc fault protection device for switchgear
The occurrence of an arc fault, the most serious fault within a switchgear system, is mostly
associated with extremely high thermal and mechanical stresses in the area concerned. An 
active arc fault protection system based on the know-how gained from decades of experience
with the ABB vacuum interrupter and Iₗ-limiter technology now effectively helps to avoid these 
negative effects if a fault should occur.

The Ultra-Fast Earthing Switch of type UFES is a combination of devices consisting of an
electronic device and the corresponding primary switching elements which initiate a 3-phase
short-circuit to earth in the event of a fault. The extremely short switching time of the primary
switching element, less than 1.5 ms, in conjunc-
tion with the rapid and reliable detection of the
fault, ensures that an arc fault is extinguished
almost immediately after it arises. With a total extinguishing time of less than 4 ms after detec-
tion, an active protection concept with the Ultra-
Fast Earthing Switch enables switchgear installa-
tions to achieve the highest possible level of pro-
tection for persons and equipment.

Greatly increased operator safety
... by effective prevention of hazardous situations

Minimized damage of electrical equipment and direct environment
... due to ultra-fast arc fault mitigation

Drastic reduction in downtimes & repair costs
... to avoid significant economic losses

Application of active protection concepts for pressure sensitive environment
... e.g. where gas ducts are not applicable

Avoidance of the severe effects of an arc fault, such as:
• Extreme pressure
• Temperature rise up to 20,000 °C
• Burning / vaporization of metal and insulating material
• Release of particles and hot gases
• Intensive light / high acoustic stress

UFES
Applications

Selection of retrofit solutions
Particularly for older, non-IAC qualified switchgear systems, the Ultra-Fast Earthing Switch allows the highest degree of protection for equipment and operator safety to be achieved. A variety of solutions are available for retrofitting of existing switchgear systems.

ABB Service Box (up to 24 kV)
Universally usable ABB UFES Service Box for retrofitting of air-insulated switchgear
- Non-proprietary application
- Maximum installation flexibility to suit the space available

ABB withdrawable solutions
The UFES primary switching elements, installed in ABB withdrawable assembly or truck design, provides a simple opportunity to upgrade existing switchgear systems with active arc fault protection
- The contact with the busbars is established via the isolating contacts of the withdrawable assembly
- The optimum Plug & Play solution when vacant panels are available
- Similar solutions are also available for other switchgear types with trucks *

New ABB switchgear
Also for new ABB switchgear, the integration of UFES is a useful supplement in order to protect this investment against the impacts of an internal arc, and in addition, to increase the operator safety to a maximum. For switchgear of type UniGear ZS1 for example, the following technical solutions are available:
- UFES installation in a top box with direct connection to the busbar
- UFES installation in the cable connection compartment
- Separate panel with UFES draw-out unit

UFES components
The Ultra-Fast Earthing Switch can also be provided as a loose OEM component. There are different types of UFES kits available.

UFES
Active protection for switchgear

01 UFES electronics type QRU100
02 UFES primary switching element type U1
03 REA system
04 UFES electronics type QRU1

UFES electronics type QRU100
- Standard electronic tripping unit for the combination with ABB arc protection system REA
- 2 Optolink inputs for connection of the REA101 relay
- 2 High-speed inputs (HSI)
- Self monitoring
- Optolink supervision
- Testing mode for functional check
- DIP switch configuration
- Ideal for extension of existing ABB arc protection systems
- Alternative: Fault detection by non-ABB system (Compatibility verification required!)

UFES primary switching element type U1
- Ultra-fast operating mechanism with micro gas generator
- Vacuum interrupter
- Compact design
- Versatile in installation
- Long service life

ABB arc protection system REA
- Optical detection via line or lens sensors
- Overcurrent detection
- Selective protection
- Circuit-breaker failure protection

UFES electronics type QRU1
- Alternative electronic detection and tripping unit
- 3 current inputs
- 9 optical inputs for light detection by lens sensors
- Complete solution for simple protection zones
- For large protection zones expandable up to 159 lens sensors with ABB arc guard type TVOC-2
- Self monitoring
- Testing mode for functional check
- DIP switch configuration
- Fast fault localization
