Course description

NA911
Microsoft Active Directory for IndustrialIT

Course goal
The goal of this course is to provide students with an in-depth knowledge of Windows technologies in a Process Portal environment.

Learning objectives
Upon completion of this course the participants will be able to:

- Install and configure Active Directory in a Process Portal environment
- Populate Active Directory and manage Active Directory objects
- Deploy and support DNS, DHCP and WINS in a manner consistent with the system requirements of Process Portal B or 800xA systems using RNRP
- Configure and lockdown desktops in a workgroup and Active Directory environment using Group Policy
- Safely deploy recommended security policies for Process Portal in a Windows environment
- Configure Active Directory replication via sites and configure Global Catalogs
- Understand the Operation Master. Roles, configure, transfer and seize the roles

Participant profile

Prerequisites
NA910 Microsoft Windows Technologies for IndustrialIT.

Course type and methods
This course is a sequel to NA910 and covers Windows advanced networking concepts as applied to a Process Portal installation. This course will prepare the students for our ABB Process Portal B and 800xA systems which run as integrated services on the Microsoft Windows networking platform.

Duration
The duration is 5 days.
