1 Introduction

1.1 Scope of the document

This document describes how to dump data from the CP600, CP600-eCo, CP600-Pro and CP600-2nd Generation panels to the network shared folder.

Panel Builder allows user to dump data like trends, alarm buffers, audit trail buffers, recipes and print PDF reports directly to a PC/Server connected to the same Network of the panel.

1.2 Compatibility

The application example in this document used with the engineering system show below. They should also work with other versions, nevertheless some small adaptations might be necessary for different versions.

- CP600
- CP600-eCo
- CP600-Pro
- CP600 2nd generation
- Panel Builder 600 version 2.8.1.447 or above

1.3 Overview
2 Dump Action

In the Panel Builder 600, user can configure the dump action for Trend, Recipe and etc. User can dump the data into local folder, SDCard, USB Memory Stick and network folder.

In the dump action for network folder, user have to set the “FolderPath” with the IP address or hostname and the network folder name (Please refer to the image below).

- Public Network: \<hostname or IP>\sharePath
- Private Network: \<username>:<password>@<hostname or IP>\sharePath

Note: Private Network only supported by Linux devices with BSP V1.0.25 and above.

The above syntax is valid also for actions:

- DumpRecipeData, "FilePath" property
- DumpTrend, "FolderPath" property
- DumpEventArchive, “FolderPath” property
- Printed File Location - for PDF report printing
3 Dump Action with Password Protected Network Folder

To access the password protected network folder, user need to configure the account credentials.

3.1 CP00

In CP600 Panel, the dump action for password-protected network folder do no required further actions. User only need to configure the dump action with the network path and other parameters as required.

\<hostname or IP>\sharePath

When the action is trigger for the first time, a Windows will show and ask to insert the credentials.

The user needs to insert the network folder credentials and the information will be saved until the next reboot of the panel.
3.2 CP600-eCo, CP600-Pro and CP600-2nd Generation

In CP600 Panel, the dump action for password-protected network folder do no required further actions. User only need to configure the dump action with the network path which include the username and password and other parameters as required.

\<username>:<password>@<hostname or IP>\YourSharePath

Example:
The network folder called “sharePath” located on a computer with IP address: “192.168.8.253”, username: “CP600” and password: “admin”.

The following settings is used:
\CP600:admin@192.168.8.253\sharePath

![Diagram showing settings in CP600 Panel]

3.3 **Dump Error Message**

In case of an issue, it’s recommended to display the dump message on the HMI. Therefore, please use the system variables “Dump Error Message” to display the status.
4 Configure Network Share Folder in Windows PC

4.1 Share a folder with permissions

After configured the panel, now the user needs to configure the network folder in the PC to enable the right access for the panel.

Below is the example on how to create a network share folder in a Windows PC without domain.

Create a folder you want to share
1. Right click on the folder and select “Properties”
2. Switch to Sharing tab
3. Select "Advanced Sharing"
4. Confirm with Ok if a message popup
5. Set the options as you can see on the picture:

6. Confirm all windows with "Apply"
4.2 **Enable SMB 1.0 protocol in Windows**

All Linux device using SMB 1.0 protocol to transfer files into a Network folder.

This protocol is not enabled in Windows by default.

Please verify if this protocol is enabled on your computer.

You can check it from:

*Control Panel Items → Programs and Features → Turn Windows features on or off → SMB 1.0/CIFS File Sharing Support*

![Windows Features](image)

All these options in the red square box should be selected. If they are not selected, please select them and click OK to confirm.
5 Read/Write PDF via Network Folder

5.1 Print Reports in Network Folder

With Panel Builder it is possible to print a report in PDF format.

The example below explains how to set print option to print in a network folder:

- Add a Report to your Panel Builder project
- Click on “Printer Settings”
- Select “Preferred” in “Printed Files Location”
- Then type property network path into “Path” (In this example network path is `\\hostname\sharedfolder\`)
5.2 Read PDF from network Folder

To read the PDF from a network folder, user can execute the action “LaunchPDFViewer” with the configuration as the picture below:

Besides reading the PDF from a network folder, user can also read the PDF from a USB memory stick.

User need to execute the action “LaunchPDFViewer” and configure base on different devices:

- On WinCE devices:
  Path for USB Device: “\USBMemory”

- On Linux devices:
  Path for local folder “testFolder”: “/mnt/data/hmi/qthmi/deploy/testFolder”

Note: This depends on where the local folder is created.
