SACE Emax DC circuit-breakers

The SACE Emax range of low voltage circuit-breakers is completed by the new SACE Emax DC series of circuit-breakers for direct current applications complying with the IEC60947-2 Standard. Thanks to the exclusive technology applied to the new SACE PR123/DC and PR122/DC trip units, the SACE Emax DC range allows all installation requirements to be met and protection up to 1000V DC / 5000A.

With connection of three interruption poles in series, the rated voltage which can be reached is 750V DC, whereas with four poles in series this rises to 1000V DC.

The withdrawable circuit-breakers must be associated with the fixed parts in a special version for applications at 750/1000V DC.

SACE Emax switch-disconnectors

ABB SACE has developed the SACE Emax/E MS range of switch-disconnectors for direct current applications up to 1000V complying with the international IEC60947-3 Standard. These circuit-breakers are particularly suitable for use as bus-ties or main switch-disconnectors in direct current plants, such as applications in the field of electric traction.

The range makes it possible to cover any installation requirement up to 1000V DC / 6300A. The circuit-breakers are available in the fixed or withdrawable version and in the three-pole or four-pole version.

With connection of three breaking poles in series, the rated voltage which can be reached is 750V DC, whereas with four poles in series this rises to 1000V DC.

The switch-disconnectors in the SACE Emax/E MS range keep all the overall dimensions and fixing points of the circuit-breakers of the standard range unchanged. The withdrawable circuit-breakers must be associated with the fixed parts in a special version for applications at 750/1000V DC.

		E1B/E MS		E2N/E MS		E3H/E MS		E4H/E MS		E6H/E MS

Rated making current I_{cm}	[%I _{cw}]	100	100	100	100	100	100	100	100	100	100

Note: By means of an extreme protection relay with maximum timing of 500 ms, the I_{cu} breaking current is the same as the I_{cw} value (1s).

* The performances at 750 V are:
 for E1B/E MS I_{cw}=25kA
 for E2N/E MS I_{cw}=40kA
 for E3H/E MS I_{cw}=50kA

Versions and connections

Versions and connections

The Emax DC circuit-breakers are available in the fixed or withdrawable, three-pole or four-pole versions.

All Emax circuit-breakers for direct current have several poles in series involved in breaking the fault, for this reason special connections busbar (known as “U connection kit”) are mounted on the circuit-breaker terminals.

Selection of the power supply side, from the lower or upper terminals, must only be made at the time of ordering and cannot be modified later by the customer.

The fixed circuit-breakers are fitted with vertical terminals, whereas it is possible to select between vertical and horizontal terminals for circuit-breakers in the withdrawable version.

Protection trip units and trip curves

PR122/DC

Characteristics

PR122/DC is the new electronic trip unit for the Emax DC series. The wide range of protection functions, together with the wide variety of trip thresholds and times, make them suitable for protection of insulated networks or networks with earthed negative polarity. Information about the unit and programming are particularly simple and intuitive thanks to the LCD graphic display.

The PR122/DC trip unit offers the following protection functions:

- overload (L);
- selective short-circuit (S);
- thermal memory for L and S (cable protection);
- instantaneous short-circuit (I);
- overtemperature (OT);
- zone selectivity for S;
- load control (K);
- starting threshold.

I Protection against instantaneous short-circuit Tolerance ⁽²⁾	$I_3 = 1.5 \dots 10 \times I_n$ $\pm 10\%$	$0.1 \times I_n$	Instantaneous $\leq 30 \text{ ms}$	–	■	$t=k$	–	–
OT Protection against overtemperature	Cannot be set	–	Instantaneous	–	–	$t=k$	–	–

(1) The minimum trip value is 0.5 s, regardless of the type of curve set

(2) These tolerances are valid in the following hypotheses:

- trip unit supplied entirely by the voltage module and/or auxiliary power supply (without start-up)
- trip time set $\geq 100 \text{ ms}$

For all cases not contemplated by the above hypotheses, the following tolerance values are valid:

	Trip threshold	Trip time
L	Trip between 1.05 and 1.25 x I1	$\pm 20\%$
S	$\pm 10\%$	$\pm 20\%$
I	$\pm 15\%$	$\leq 60 \text{ ms}$

With plant voltages higher than or equal to 100V, the PR122/DC electronic trip unit guarantees protection without the need of an auxiliary power supply (24V DC).

The PR122/DC electronic trip unit can, in fact, always be equipped with the PR120/V module able to supply the trip unit with plant voltages between 250V DC and 1000V DC.

For voltages between 100V DC and 250V DC, it is necessary to order the PR120/LV module, specifying the extracode 1SDA066223R1.

The following table shows the cases when it is possible to use the measurement modules (PR120/V and PR120/LV):

Ue [V]	12	100	250	1000
PR120/LV:	PR120/LV + Vaux	PR120/LV	NO	
PR120/V:	PR120/V + Vaux	PR120/V + Vaux	PR120/V	

When there is an auxiliary power supply, see the table below for the overall consumption values.

	PR122/DC	PR120/D-M	PR120/K
Auxiliary power supply (galvanically insulated)	24V DC \pm 20%	from PR122/DC	from PR122/DC
Maximum ripple	5%		
Inrush current @ 24V	\sim 10A for 5 ms		
Rated power @ 24V	\sim 3 W	+1.5 W	+1.5 W

When Emax DC circuit-breakers are used in plants with capacitor banks with possible back-to-back inrush currents $\geq 3xI_n$, it is necessary to use a 24V DC galvanically insulated auxiliary power supply.

Emax DC circuit-breakers are normally supplied with power input from lower terminals, i.e. the PR120/V-PR120/LV internal connection is on the lower terminals, whereas the U connections are on the upper terminals:

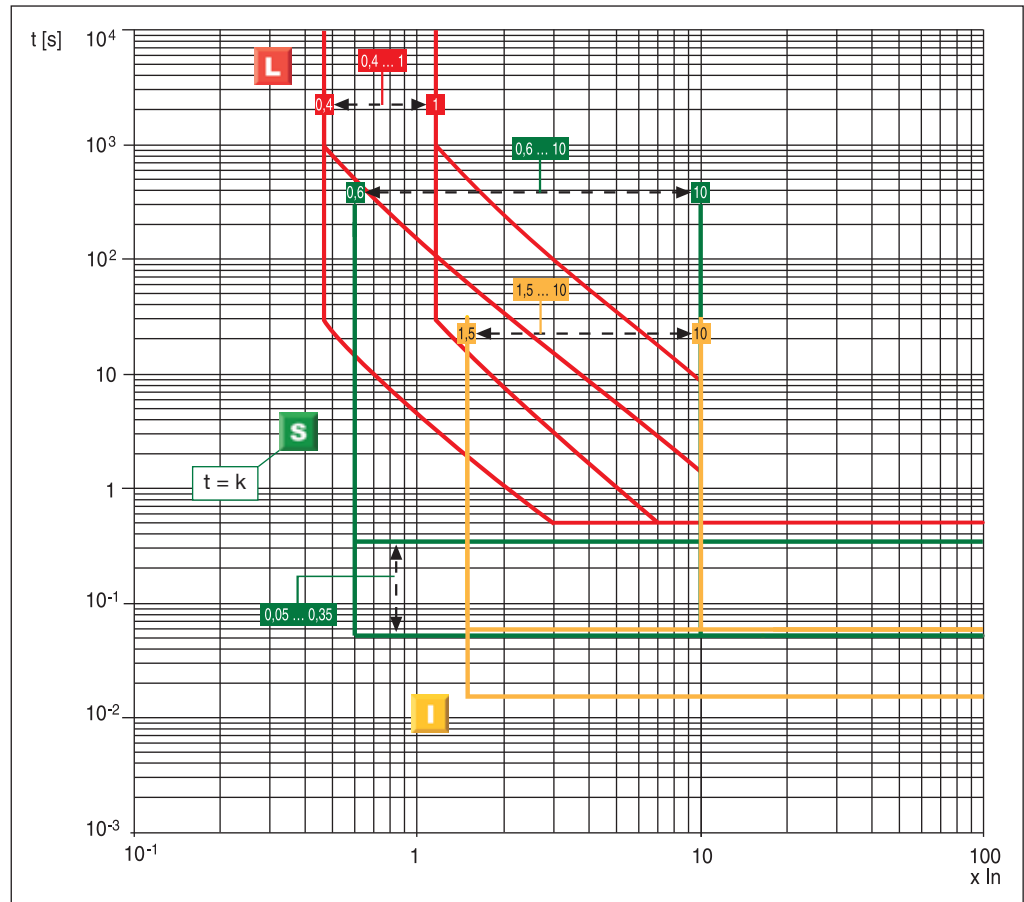

For power supply from upper terminals, refer to the Code Section for ordering.

Protection is guaranteed even when the electronic trip unit is not powered thanks to the PR120/DC module which always equips the PR122/DC.

Protection trip units and trip curves

PR123/DC

Characteristics

With the PR123/DC electronic protection trip unit, the range of trip units available for the Emax DC series of circuit-breakers is completed.

PR123/DC is a high-performing trip unit capable of carrying out a complete set of protections, measurements, indications, data storage and circuit-breaker control functions.

PR123/DC not only offers protection but also measurement of current and voltage of both polarities (+ and -), thus being suitable for any type of network.

The front interface of the unit, common to PR122/DC, is extremely simple thanks to the aid of the LCD graphic display.

The PR123/DC trip unit offers the following protection functions:

- overload (L);
- selective short-circuit (S);
- thermal memory for L and S (cable protection);
- instantaneous short-circuit (I);
- earth fault with adjustable delay (G);
- polarity unbalance (U);
- protection against overtemperature (OT);
- load control (K);
- undervoltage (UV);
- overvoltage (OV);
- active power reversal (RP);
- double set of parameters (Dual Setting);
- zone selectivity for S and G;
- starting thresholds for protection S and I.

OV Overvoltage protection Tolerance ⁽²⁾	$U9 = 1.05...1.2 \times U_n$ $\pm 5\%$	$0.01 \times I_n$	With voltage $U < U9$ $t9 = 0.1 \text{ s}...5 \text{ s}$ The best of the two data: $\pm 20\%$ or $\pm 40 \text{ ms}$	0.1 s	■	$t=k$	–	–
RP Protection against reversal of power Tolerance ⁽²⁾	$P11 = -0.3...-0.1 \times P_n$ $\pm 10\%$	$0.02 \times P_n$	At power $P < P11$ $t11 = 0.5 \text{ s}...25 \text{ s}$ The best of the two data: $\pm 10\%$ or $\pm 100 \text{ ms}$	0.1 s	■	$t=k$	–	–

(1) The minimum trip value is 0.5 s, regardless of the type of curve set

(2) These tolerances are valid with the following hypothesis:

- trip unit supplied from the voltage module and/or auxiliary power supply (without start-up)
- trip time set $\geq 100 \text{ ms}$

For all cases not contemplated by the above hypothesis, the following tolerance values are valid:

	Trip threshold	Trip time
L	Trip between 1.05 and $1.3 \times I1$	$\pm 20\%$
S	$\pm 10\%$	$\pm 20\%$
I	$\pm 15\%$	$\leq 60 \text{ ms}$
G	$\pm 15\%$	$\pm 20\%$
Altri	$\pm 20\%$	

With plant voltages higher than or equal to 100V, the PR123/DC electronic trip unit guarantees protection without the need of an auxiliary power supply (24V DC).

The PR123/DC electronic trip unit is, in fact, always fitted with the PR120/V module able to supply the trip unit with plant voltages between 250V DC and 1000V DC.

For voltages between 100V DC and 250V DC, it is necessary to request the PR120/LV module, specifying the extracode 1SDA066223R1.

The following table shows the possible cases of use of the measurement modules (PR120/V and PR120/LV):

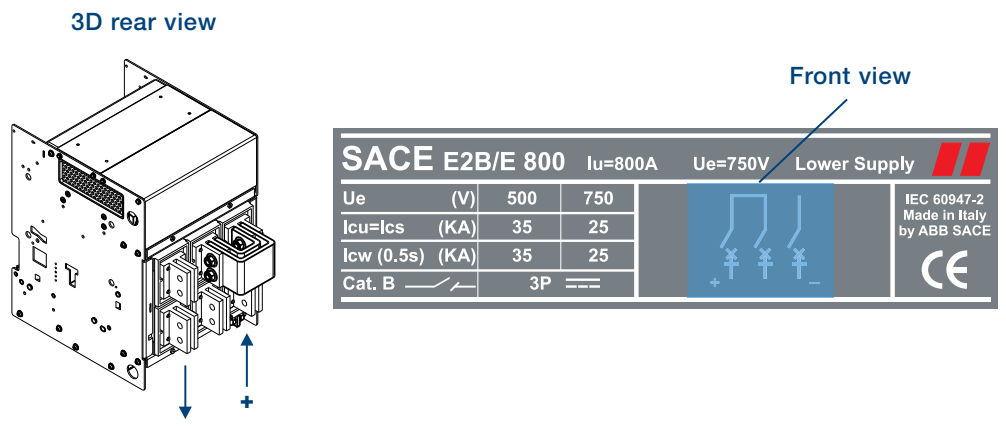

Ue [V]	12	100	250	1000
PR120/LV:	PR120/LV + Vaux	PR120/LV	NO	
PR120/V:	PR120/V + Vaux	PR120/V + Vaux	PR120/V	

When there is an auxiliary power supply, see the table given below for the overall consumption values.

	PR123/DC	PR120/D-M	PR120/K
Auxiliary power supply (galvanically insulated)	24V DC \pm 20%	from PR123/DC	from PR123/DC
Maximum ripple	5%		
Inrush current @ 24V	\sim 10A for 5 ms		
Rated power @ 24V	\sim 3 W	+1,5 W	+1,5 W

When Emax DC circuit-breakers are used in plants with capacitor banks with possible inrush back-to-back currents $\geq 3xI_n$, it is necessary to use a 24V DC galvanically insulated auxiliary power supply.

The range of Emax DC circuit-breakers is normally supplied with power input from lower terminals, i.e. the PR120/V-PR120/LV internal connection is on the lower terminals, whereas the U connections are on the upper terminals:

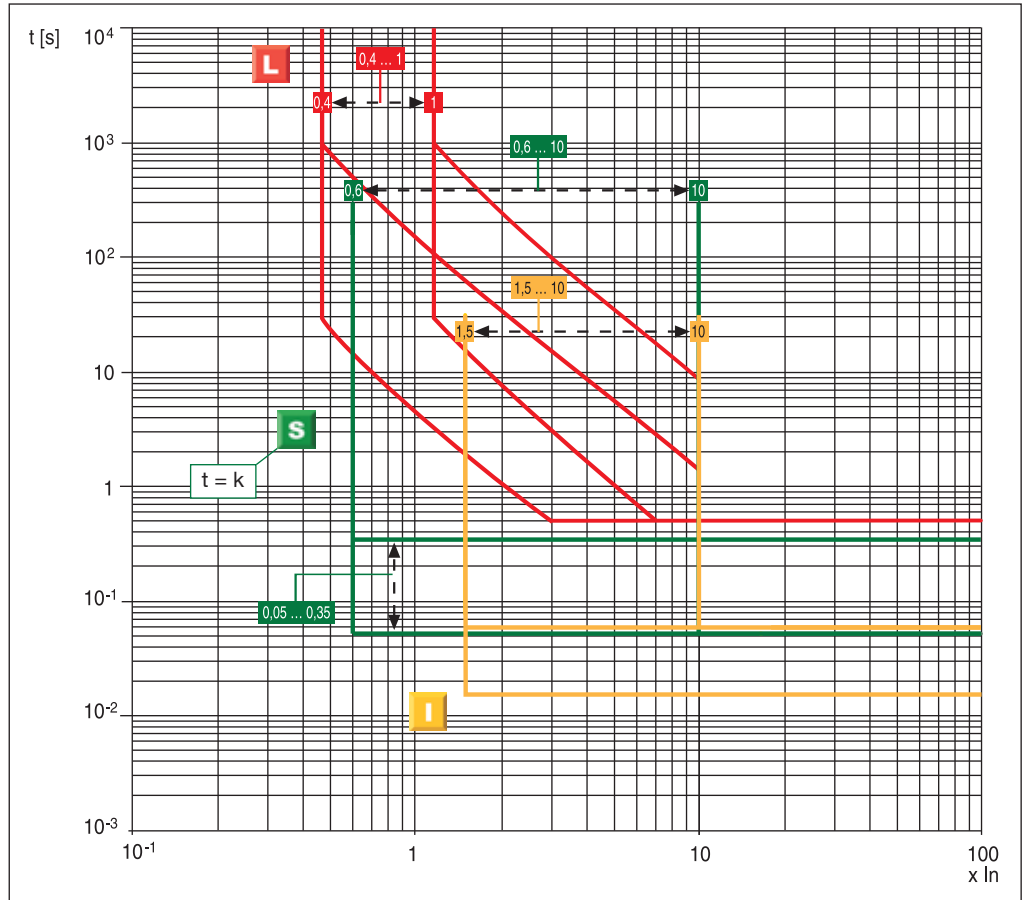

For power input to the upper terminals, refer to the ordering Code Section.

Protection is guaranteed even when there is no power supply to the electronic trip unit thanks to the PR120/DC module, which always equips the PR123/DC.

PR122/DC and PR123/DC: optional modules

The PR122/DC and PR123/DC electronic trip units can be fitted with the following optional modules, which are already available on the PR122/P and PR123/P electronic devices for alternating current applications.

Code	Internal	Description	PR122/DC PR123/DC
1SDA058255R1	PR120/K	Internal indication module (4 outputs with independent terminals)	■
1SDA058256R1	PR120/K	Internal indication module (4 outputs + input with common terminal)	■
1SDA058254R1	PR120/D-M	Modbus RTU communication module	■
1SDA065223R1 ⁽¹⁾	PR120/LV	Measurement module for low voltage (100...250V DC)	■

⁽¹⁾ Extracode to be specified with the circuit-breaker code to order the PR120/LV low voltage measurement module instead of the PR120/LV. The PR120/LV measurement module and the PR120/DC override protection module are always supplied with the electronic trip units.

Code	External	Description	PR122/DC PR123/DC
1SDA058258R1	PR030/B	Power supply unit	■
1SDA058259R1	BT030-USB	External wireless communication unit (without wires)	■
1SDA048964R1	PR010/T	External test unit	■
1SDA059146R1	PR021/K	External indication unit	■

Protection trip units and trip curves

Measurement

PR122/DC

The following measurements are available:

- Current;
- Instantaneous value of the current over a period of time (data logger);
- Maintenance: Number of operations, percentage of contact wear, storage of opening data (last 20 trips and 80 events);
- Historical data of the maximum values of current reading.

PR123/DC

- Current;
- Maintenance: Number of operations, percentage of contact wear, storage of opening data (last 20 trips and 80 events);
- Voltage;
- Instantaneous value of the current/voltage over a period of time (Data Logger);
- Power;
- Energy;
- Historical data of the maximum values of current reading, the maximum voltage and the minimum voltage, the total maximum value and the average value of the power.

Protection trip units and trip curves

Functions

The functions available on the PR122/DC and PR123/DC electronic trip units fitted with Modbus PR120/D-M communication module are listed in the following table.

Electric wiring diagrams

Information for reading

Warning

Before installing the circuit-breaker, carefully read note F on the circuit diagrams.

Operating status shown

The circuit diagram is for the following conditions:

- withdrawable circuit-breaker, open and racked-in
- circuits de-energised
- releases not tripped
- motor operating mechanism with springs discharged.

Versions

Though the diagram shows a circuit-breaker in withdrawable version, it can be applied to a fixed version circuit-breaker as well.

Fixed version

The control circuits are fitted between terminals XV (connector X is not supplied).
With this version, the applications indicated in figures 31 and 32 cannot be provided.

Withdrawable version

The control circuits are fitted between the poles of connector X (terminal box XV is not supplied).

Fig. 11	= Contact for electrical signalling of springs charged.
Fig. 12	= Contact for electrical signalling of undervoltage release energized (see notes B and S).
Fig. 13	= Contact for electrical signalling of circuit-breaker open due to tripping of the overcurrent release. The circuit-breaker may be closed only after pressing the reset pushbutton.
Fig. 14	= Contact for electrical signalling of circuit-breaker open due to tripping of the overcurrent release and electrical reset coil. The circuit-breaker may be closed only after pressing the reset pushbutton or energizing the coil.
Fig. 21	= First set of circuit-breaker auxiliary contacts.
Fig. 22	= Second set of circuit-breaker auxiliary contacts (see note V).
Fig. 23	= Third set of supplementary auxiliary contacts outside the circuit-breaker.
Fig. 31	= First set of contacts for electrical signalling of circuit-breaker in racked-in, test isolated, racked-out position.
Fig. 32	= Second set of contacts for electrical signalling of circuit-breaker in racked-in, test isolated, racked-out position.
Fig. 42	= Auxiliary circuits of PR122/DC and PR123/DC trip units (see notes F, M and V).
Fig. 45	= Circuits of the communication module PR120/D-M of the PR122/DC and PR123/DC trip units (optional, see note E).
Fig. 46	= Circuits of the indicator module PR120/K of the PR122/DC and PR123/DC trip units - connection 1 (optional; see note V).
Fig. 47	= Circuits of the indicator module PR120/K of the PR122/DC and PR123/DC trip units - connection 2 (optional; see note V).
Fig. 62	= Circuits of the PR021/K signalling module (outside the circuit-breaker)

Incompatibilities

The circuits indicated in the following figures cannot be supplied simultaneously on the same circuit-breaker:

6 - 7 - 8
13 - 14
22 - 46 - 47

Notes

- A) The circuit-breaker is only fitted with the accessories specified in the ABB SACE order acknowledgement. Consult this catalogue for information on how to make out an order.
- B) The undervoltage release is supplied for operation using a power supply branched on the supply side of the circuit-breaker or from an independent source. The circuit-breaker can only close when the release is energized (there is a mechanical lock on closing). If the same power supply is used for the closing and undervoltage releases and the circuit-breaker is required to close automatically when the auxiliary power supply comes back on, a 30 ms delay must be introduced between the undervoltage release accept signal and the energizing of the closing release. This may be achieved using an external circuit comprising a permanent make contact, the contact shown in fig. 12 and a time-delay relay.
- E) MODBUS map is available in the RE1134001 document
- F) The auxiliary voltage U_{aux} allows actuation of all operations of the PR122/DC and PR123/DC trip units. Having requested a U_{aux} insulated from earth, one must use "galvanically separated converters" in compliance with IEC 60950 (UL 1950) or equivalent standards that ensure a common mode current or leakage current (see IEC 478/1, CEI 22/3) not greater than 3.5 mA, IEC 60364-41 and CEI 64-8.
- N) With PR122/DC and PR123/DC trip units, the connections to the zone selectivity inputs and outputs must be made with a two-pole shielded and stranded cable (see user manual), no more than 300 m long. The shield must be earthed on the selectivity input side.
- P) With PR122/DC and PR123/DC trip units with communication module PR120/D-M, the power supply for coils YO and YC must not be taken from the main power supply. The coils can be controlled directly from contacts K51/YO and K51/YC with maximum voltages of 110-120 V DC and 240-250 V AC.
- Q) The second opening release may be installed as an alternative to the undervoltage release.
- S) Also available in the version with normally-closed contact
- V) If fig. 22 is present (second set of auxiliary contacts) simultaneously as PR122/DC or PR123/DC release, the contacts for the zone selectivity in fig. 42 (K51/Zin, K51/Zout, K51/Gzin and K51/Gzout) are not wired. In addition, the indicator module PR120/K in figures 46 and 47 cannot be supplied

Selection of Emax DC

Emax DC circuit-breakers must be selected according to:

- 1) Type of network;
- 2) Rated current (I_u);
- 3) Rated voltage (U_e);
- 4) Short-circuit current (I_{cu});
- 5) Poles;
- 6) Version (Fixed - F - or Withdrawable - W);
- 7) Power supply (from the upper or lower terminals).

Plates:

POWER SUPPLY FROM UPPER TERMINALS

SACE E2B/E 800				$I_u=800A$	$U_e=750V$	Upper Supply

1) For higher voltages, ask ABB SACE

It is necessary to specify the 1SDA068806R1 extracode for the special dedicated configuration with 4 poles.

Selection of Emax DC

Ordering Rules

Fixed circuit-breaker (F)

ABB SACE delivers the circuit-breaker in the standard configuration supplied from lower terminals.

CODE

To change the power supply side from lower terminals to the upper ones, it is necessary to specify the 1SDA058251R1 extracode.

CODE + 1SDA058251R1

In the case of a network with earthed negative polarity and a four-pole circuit-breaker (4p), it is always necessary to specify the 1SDA068806R1 extracode

Supplied from lower terminals

CODE + 1SDA068806R1

Supplied from upper terminals

CODE + 1SDA058251R1 + 1SDA068806R1

Withdrawable circuit-breaker (W)

MOVING PART

For the moving part in withdrawable circuit-breakers supplied from lower terminals, it is sufficient to indicate the circuit-breaker code only. The voltage sockets are therefore positioned on the lower terminals.

CODE

If supplied from the upper terminals, it is necessary to have the voltage sockets onto the upper terminals, specifying the 1SDA058251R1 extracode:

CODE + 1SDA058251R1

In the case of a network with earthed negative polarity and 4p circuit-breaker, the 1SDA068806R1 extracode must be specified in addition in order to have 3 poles in series on the positive pole.

FIXED PART

The configuration of the fixed part for Emax DC circuit-breakers must be defined starting with the fixed parts for special applications up to 750/1000V DC and adding the "U" connection kit:

Power supply from lower terminals

CODE FOR FIXED PART with vertical terminals + 1SDA065169R1

or

CODE FOR FIXED PART with horizontal terminals + 1SDA067149R1

Power supply from upper terminals

CODE FOR FIXED PART with vertical terminals + 1SDA065619R1

or

CODE FOR FIXED PART with horizontal terminals + 1SDA067150R1

In the case of a network with earthed negative polarity and 4p circuit-breaker, the 1SDA068806R1 extracode must be specified in addition in order to have 3 poles in series on the positive pole.

E2/6 DC	24...30V DC	038316
E2/6 DC	48V AC / DC	038317
E2/6 DC	60V AC / DC	038318
E2/6 DC	110...127V AC / DC	038319
E2/6 DC	220...250V AC / DC	038320

**Geared motor for automatic charging of the closing springs - M (3)**

E2/6 DC	24...30V AC / DC	038321
E2/6 DC	48...60V AC / DC	038322
E2/6 DC	100...130V AC / DC	038323
E2/6 DC	220...250V AC / DC	038324

Note: it is always supplied with limit contact and microswitch for indication of closing springs charged (accessory 5d)

Overcurrent release trip indication - (4a)

E2/6 DC		058260
---------	--	--------

Electrical indication of overcurrent release trip by remote control - (4b)

E2/6 DC	220...240V AC/DC	058261
E2/6 DC	110...130V AC/DC	058262
E2/6 DC	24...30V AC/DC	058263

**Electrical indication of circuit-breaker open/closed - Q1 ... 10 - (5a)**

E2/6 DC - PR122-3/DC	4 auxiliary contacts (2NO+2NC+2PR122-3)	068801 (c)
E2/6 DC - PR122-3/DC	4 auxiliary contacts (2NO+2NC+2PR122-3) for digital signals	068802
E2/6 DC - PR122-3/DC	10 auxiliary contacts (5NO+5NC+2PR122-3 - installed)	068803 (a)
E2/6 DC - PR122-3/DC	10 auxiliary contacts (5NO+5NC+2PR122-3 - not installed)	068804 (b)
E2/6 DC - PR122-3/DC	10 auxiliary contacts (5NO+5NC+2PR122-3) for digital signals	068805

Note: (a) Can only be ordered mounted with circuit-breakers.
 (b) Can only be ordered loose in the case of circuit-breakers.
 (c) Already included for circuit-breakers with PR122/DC and PR123/DC. Can only be ordered as loose accessories.

Additional external electrical indication of circuit-breaker open/closed - Q11 ... 25 - (5b)

E2/6 DC	15 additional auxiliary contacts (version for fixed/ withdrawable racked-in)	043475 (a)
E2/6 DC	15 additional auxiliary contacts (version for withdrawable racked-in/ test)	048827
E2/6 DC	15 additional auxiliary contacts for digital signals (version for fixed/withdrawable racked-in)	050145 (a)
E2/6 DC	15 additional auxiliary contacts for digital signals (version for withdrawable racked-in/ test)	050151

Note: Outside the circuit-breaker. To be requested in alternative to the different types of interlocks (accessory 10) and to the mechanical compartment door lock (accessory 8f).
 (a) For fixed version, also request the interlock plate (accessory 10.4).

Ordering Examples

Selection of an Emax DC circuit-breaker depends on the plant requirements:

a. Plant requirements:

- Type of network: insulated network
- Rated current (I_u): 800A
- Rated voltage (U_e): 110V
- Short-circuit current: I_{cu}= 20kA
- Version: Withdrawable (W)
- Power supply: from lower terminals
- Protections required of the trip unit: LSI
- Terminals: horizontal rear (HR)

Insulated network⁽¹⁾

Rated voltage (U _e)			≤ 500	≤ 750	≤ 1000
isolation			■	■	■
protection			■	■	■
PR122/DC			■	■	■
PR123/DC			■	■	■
I _{cu} ⁽²⁾			[kA]	[kA]	[kA]

		4000	100	65	65
5000					

⁽¹⁾ the possibility of a double earth fault is considered negligible with this type of pole connections. For further information, see QT5: "ABB circuit-breakers for direct current applications".

⁽²⁾ I_{cu} with L/R = 15ms according to IEC 60946-2 Standard. For I_{cu} with L/R = 5ms and L/R = 30ms, ask ABB.

⁽³⁾ 85kA only if supplied from below and specifying the following extracode at the ordering stage: 1SDA067148R1. I_{cs}=65kA.

According to plant requirements, the choice falls on E2B 3p because it has a value of $I_{cu} \geq 20kA$, 800A rated current and is fitted with PR122/DC.

As for all the withdrawable version circuit-breakers, both the moving part and the fixed part must be ordered:

Moving part: as the standard solution, ABB SACE supplies the Emax DC moving parts with voltage sockets located on the lower terminals, according to power supply from these same terminals.

Fixed part: The same fixed parts with horizontal terminals as the switch-disconnectors are used for special direct current applications (MS/E) up to 750V DC if they are 3p, up to 1000V DC if they are 4p.

⁽¹⁾ I_{cu} with L/R = 15ms according to IEC 60946-2 Standard. For I_{cu} with L/R = 5ms and L/R = 30ms, ask ABB.

⁽²⁾ 85kA only if supplied from below and specifying the following extracode at the ordering stage: 1SDA067148R1. I_{cs}=65kA.

According to plant requirements, the choice falls on E3N because it has a value of $I_{cu} \geq 30kA$ and 2500A rated current. Since a voltage $U_e \geq 750V$ is required, the version with 4 poles is necessary.

E3N20 PR123/DC 4p power supply from the upper terminals

As the standard solution, ABB SACE supplies fixed direct current circuit-breakers supplied from the lower terminals. In the case of power supply from upper terminals, it is necessary to specify the 1SDA058251R1 extracode at the time of ordering.

⁽¹⁾ for networks with positive earthed polarity, ask ABB.

⁽²⁾ for higher voltages, ask ABB.

⁽³⁾ for further information, see QT5: "ABB circuit-breakers for direct current applications".

⁽⁴⁾ I_{cu} with L/R = 15ms according to IEC 60946-2 Standard. For I_{cu} with L/R = 5ms and L/R = 30ms, ask ABB.

⁽⁵⁾ 85kA only if supplied from below and specifying the following extracode at the ordering stage: 1SDA067148R1. I_{cs}=65kA.

According to plant requirements, the choice falls on E3H because it has a value of I_{cu} (up to 500V) $\geq 65kA$ and 1600A rated current, 4 poles.

E3H 16 PR123/DC 4p F VR

As the standard solution, ABB SACE supplies fixed direct current circuit-breakers supplied from lower terminals. The 4-pole configuration for network with earthed negative polarity requires a special extracode which makes it possible to have 3 poles in series on the positive polarity (not earthed): 1SDA068806R1.
