NOTES:
1. All installations in hazardous locations must comply with requirements of certification drawing 2017275-CD.

J15 is ONLY found on the XFC and later versions of this board (XRC included). Older versions of the 6400 will not have this connector.

- DO1 provides GND path, when activated
- VBATT provides Voltage to Device

Third Party Solenoid/Sampler

This diode is required, when NOT included in Solenoid/Sampler (Sampler does not provide protection from inductive kickback). Diode should be placed as close to the solenoid as possible.

(Recommended diode: 1N5818)

XRC Board 2100355
