**Notes:**

1. Latched pushbutton switch emulates drop down menu for "IG/I0 signal Set" parameter in PCM600 Switch position shown for recommended setting (Meas Io) . Switch is typical for all connected functions. Position can be set individually for each function.

2. Rotary Switch emulates drop down menu for "Pol Signal Sel" parameter setting in PCM600. Switch position shown for default setting (Neg Seq Volf) . Switch is typical for all connected functions. Position can be set individually for each function.

3. "Pol Signal Sel" parameter setting "Calc Vo", and 59N-1 functions not applicable for open delta connected VT's.

**General Notes:**

1. This drawing does not show all functions available in REF615 configuration D relay. The functions shown are for a distribution feeder application.

2. PCM600 ACT (Application Configuration Tool) logic is shown in default state.
1. Style and code numbers for FT-1 switches provide black covers and handles, screw terminals and standard depth. Poles selection follows arrangement shown in this drawing set. For custom designs, different selection options can be made by using FT-1 configurator at ft1switch.com.

2. Refer to 615 series ANSI Installation Manual for relay and cutout dimensions (Document ID: MACCO51065-MB, Revision: D, Product version 4.0)
General Notes:
Binary I/O shown is from default PCM600 Application Configuration Tool (ACT).
Connections shown are typical though more connections may be needed for specific application.
