4234 500 & 4234 501
Intrinsically Safe Power Supply Unit
The Company

We are an established world force in the design and manufacture of measurement products for industrial process control, flow measurement, gas and liquid analysis and environmental applications.

As a part of ABB, a world leader in process automation technology, we offer customers application expertise, service and support worldwide.

We are committed to teamwork, high quality manufacturing, advanced technology and unrivalled service and support.

The quality, accuracy and performance of the Company’s products result from over 100 years experience, combined with a continuous program of innovative design and development to incorporate the latest technology.

Electrical Safety

This equipment complies with the requirements of CEI/IEC 61010-1:2010 ‘Safety Requirements for Electrical Equipment for Measurement, Control and Laboratory Use’. If the equipment is used in a manner NOT specified by the Company, the protection provided by the equipment may be impaired.

Symbols

One or more of the following symbols may appear on the equipment labelling:

Information in this manual is intended only to assist our customers in the efficient operation of our equipment. Use of this manual for any other purpose is specifically prohibited and its contents are not to be reproduced in full or part without prior approval of the Technical Publications Department.

Health and Safety

To ensure that our products are safe and without risk to health, the following points must be noted:

1. The relevant sections of these instructions must be read carefully before proceeding.
2. Warning labels on containers and packages must be observed.
3. Installation, operation, maintenance and servicing must only be carried out by suitably trained personnel and in accordance with the information given.
4. Normal safety precautions must be taken to avoid the possibility of an accident occurring when operating in conditions of high pressure and/or temperature.
5. Chemicals must be stored away from heat, protected from temperature extremes and powders kept dry. Normal safe handling procedures must be used.
6. When disposing of chemicals ensure that no two chemicals are mixed.

Safety advice concerning the use of the equipment described in this manual or any relevant hazard data sheets (where applicable) may be obtained from the Company address on the back cover, together with servicing and spares information.
1 INTRODUCTION

1.1 General
This instruction manual describes the installation and operation of the 4234 Series Power Supply Unit (PSU), designed to provide a stabilised (optional 350, 250 or 180 mA) DC supply for operation of a single katharometer unit installed in a hazardous area. This PSU is certified as Intrinsically Safe ATEX II (1)G [Ex ia Ga] IIC (–20°C ≤Ta ≤+55°C) certificate number BAS 01 ATEX 7041 and must be installed in the safe area.

Additionally, this PSU can be installed as a replacement for 004234 000/01/02 PSUs in systems that are covered by BASEEFA Certificate No Ex 77138 and Ex 76181, under variations for those certificates.

1.2 Description – Fig. 1.1
The PSU is available in two separate versions defined in Section 2.

The unit is housed in a metal case fitted with mounting lugs. Cable gland entries are provided at opposite ends of the case for supply voltage input and intrinsically safe output cables respectively.

A printed circuit board (PCB) assembly (see Fig. 1.1) contains the circuit components. The supply voltage input is connected to terminal block (TB1) located on the PCB, adjacent to the fuses F2 and F3. The intrinsically safe constant current output terminal block (TB2) is located on the gland assembly at the opposite end of the assembly. The PCB is mounted on a steel chassis and secured by six screws. The cover is perforated to allow ventilation for cooling.

Note. The PSU has NO serviceable parts.

Two identical fuses (L & N) are mounted within the unit on the mains input. A third fuse is connected in the DC line circuit of the transformer. The L & N fuses are a high breaking capacity type and must only be replaced with identical types. See Section 2 for rating.

Fig. 1.1 Location of Internal Component
2 SPECIFICATION

4234-500 and 4234-501

Power supply
- Series 4234-501: 115V AC 50/60Hz
- Series 4234-500: 230V AC 50/60Hz

Supply limits
- Voltage variation: ±15%
- Frequency range: 46 to 64Hz

Power consumption
- 30 W Max.

Fuse ratings
- L & N (F2 and F3): 250mA (T) (20 x 5mm) 250VA, 1500A h.b.c. cartridge type
- DC line (F1): 400mA (F) (250V AC)

Load
- One katharometer (12.5Ω max.)
- plus interconnecting cable (1.5Ω max.)

Output

Output
- 180, 250 or 350mA DC (constant current)

Output regulation
- Within ±0.8% for:
  a) Load variation ±15%
  b) Supply variation ±6%
  c) Ambient temperature ±10°C (50°F)

Ripple
- Less than 17.5V across 10Ω load peak to peak

Output stability
- Within ±0.7% of initial setting over a period of one month with load resistance, supply voltage and ambient temperature at nominal stated values

Maximum load
- 12.5Ω (one Katharometer)

Environmental

Protection
- IP30 (NEMA 1)

Ambient temperature range
- –20 to 55°C (~–4 to 131°F)

Mounting centres
- 140mm x 110mm (5.5 x 4.3 in.)

Overall dimensions
- 170mm high x 160mm width x 110mm depth (6.7 in. high x 6.3 in. width x 4.3 in. depth)

Weight
- 2.12kg (0.96 lb) approx.

IS certification
- [Ex ia Ga] IIC (–20°C ≤Ta≤ +55°C)
- BASEEFA Certificate No. BAS01 ATEX7041
3 MECHANICAL INSTALLATION

The PSU must be mounted in a clean, dry, well ventilated position (on a wall or panel) in the safe area by means of the four fixing lugs. Fig. 3.1 gives dimensions and fixing details for the unit.

Before commencing installation, check that the unit supplied is suitable for the supply voltage available – see Section 2 and the data plate on the unit cover, Fig. 3.2.

![Fig. 3.1 PSU Dimensions](image)

Ensure a clearance of at least 100 (4) at both ends of the unit for access to the cable glands and to minimize cable bends.

An adaptor kit (part number 4234 519) is available for mounting the 4234 500/501 PSU in place of the 004234 000/01/02 PSU.

4.1 Interconnection Diagrams and Cable Requirements

**Warning.**
- The mains supply to the equipment must be able to isolate the equipment independently. For example, use a switched spur or a mains isolator correctly rated according to the regulations of the country in which the equipment is being used.
- The means of isolation must be located as close to the equipment as possible and must not be obstructed.
- The switch or isolator must be clearly marked.

**Note.** Ensure all connections are made in accordance with local and/or national regulations.

Figs 4.1, 4.2 and 4.3 show the interconnections for intrinsically safe gas analysis systems. Use wiring rated to 75 °C (167 °F) minimum only. It is important to ensure that the connections between system components conform to the requirements of EN60079-14.

The interconnecting cable between the PSU and the katharometer is subject to a stringent limitation imposed by the intrinsic safety requirements. Figs 4.1, 4.2 and 4.3 outline the requirements for the overall system.

The inductance/resistance ratio of the cable used to carry the stabilised DC constant current (mA) supply into the hazardous area must not exceed the maximum for the relevant atmosphere classification as specified in Figs 4.1, 4.2 and 4.3.

The choice of wiring cable is restricted due to the limitations imposed by the certification parameters – see Notes 2a, b and c in Figs 4.1, 4.2 and 4.3.

It should be further noted that the resistance of this interconnecting cable should be kept to a minimum and must not exceed 1.5 Ω. This limits the maximum cable length between a katharometer and its associated power supply unit.

Single sheathed conducting cables must be tightly twisted together to reduce their mutual inductance and laid separately from cables carrying 'safe area' connections.

The only requirement in respect of intrinsic safety for the cable used to connect the AC supply voltage to the PSU is that it should NOT be routed with the intrinsically safe constant current (mA) stabilised supply output cable.

It should be noted that the cable glands will accept a cable between 5 to 9mm in diameter.
4 ELECTRICAL INSTALLATION...

Fig. 4.1 PSU in Association with the 6553 System

Note 1 Apparatus which is unspecified except that it must not be supplied from nor contain in normal or abnormal conditions a source of potential with respect to earth in excess of 250 volts r.m.s. or 250 volts d.c.

Note 2a The capacitance and either the inductance or the inductance to resistance (L/R) ratio of the cable connected between the + and – terminals of the power supply Type 4234 500/501 and terminals 1 and 4 of a katharometer Type 0065XX must not exceed the following values:

<table>

Note 3 The cable may be separate cables or may be installed as separate circuits within a type 'A' or a type 'B' multicore cable as defined in EN60079-14: 2009, 12.2.28 (latest edition) subject to the following:

a. Each circuit shall be individually screened within a type 'A' multicore cable.

b. The peak voltage of any other circuit within a type 'B' multicore cable must not exceed 60 volts.

Note 4 The installation must comply with national requirements (e.g. in the UK EN60079-14: latest edition).

Note 5 The system must be marked with a durable label. The label should appear on or adjacent to the principal item of electrical apparatus in the system or at the interface between the intrinsically safe and non-intrinsically safe circuits. This marking shall include the word SYST or SYSTEM, e.g. 'BAS SYSTEM No Ex 01E2044' or 'BAS No Ex 01E2044 SYST'.

Note 6 A junction box, if used, must satisfy the requirements of Clauses 6.1 and 6.3.1 of EN60079-11 (latest edition).

Note 7 Circuit A or Circuit B may be omitted. Circuit B may be identical to Circuit A.

Note 8 This item may or may not be fitted.

Note 9 Zener barriers (B1, B2 & B3) MTL 7755ac BAS 01 ATEX 7217 & IECEx BAS 04.0025.

Note 10 Gas Monitor Type 6553
Display/Control Unit Model 6553
CERTIFIED [Ex ia Ga] IIC
Certification No BAS 01 ATEX 7041 & IECEx BAS 04.0025

Note 11 A junction box, if required, see note 6. Location: Hazardous or Safe Area

Note 12 The system must be marked with a durable label. The label should appear on or adjacent to the principal item of electrical apparatus in the system or at the interface between the intrinsically safe and non-intrinsically safe circuits. This marking shall include the word SYST or SYSTEM, e.g. 'BAS SYSTEM No Ex 01E2044' or 'BAS No Ex 01E2044 SYST'.

Note 13 The installation must comply with national requirements (e.g. in the UK EN60079-14: latest edition).

Note 14 A junction box, if used, must satisfy the requirements of Clauses 6.1 and 6.3.1 of EN60079-11 (latest edition).

Note 15 Circuit A or Circuit B may be omitted. Circuit B may be identical to Circuit A.

Note 16 This item may or may not be fitted.

Note 17 Zener barriers (B1, B2 & B3) MTL 7755ac BAS 01 ATEX 7217 & IECEx BAS 04.0025.
Note 1 Apparatus which is unspecified except that it must not be supplied from nor contain in normal or abnormal conditions a source of potential with respect to earth in excess of 250 volts RMS or 250 volts DC.

Note 2a The capacitance and either the inductance or the inductance to resistance (L/R) ratio of the cable connected between the + and – terminals of the power supply Type 4234500/501 and terminals 1 and 4 of a katharometer Type 0065XX, must not exceed the following values:

Note 6 A junction box, if used, must satisfy the requirements of Clauses 6.1 and 6.3.1 of EN60079-11 (latest edition).
4.2 Accessing the PSU Terminals

**Warning.** If the PSU is cubicle mounted or has its cover removed for test purposes, AC mains supply voltage is exposed at certain locations within the assembly when supplies are connected. Thus, there is a risk of electrocution.

All normal precautions must be taken to avoid the risk of accidental electrical shock during installation and maintenance of the equipment. Ensure that the supply cable is disconnected at its source before touching any electrical connections.

**Caution.** Ensure that the correct version of the unit has been supplied for the supply voltage available. A 115V unit cannot be used with a 230V supply or vice versa.

Check that the current output meets the katharometer input requirements (see katharometer data label) – see Fig. 4.6. If in doubt contact ABB.

Remove the power supply unit cover to obtain access to the separate labelled terminal blocks – see Fig. 4.4.

---

4.3 Electrical Connections

The mains terminal block, TB1, is situated next to the transformer, T1, and fuses, F2 and F3.

Connect the AC mains input cable as in Fig. 4.5.

**Note.** Earth bonding to be made via M5 Earth Stud.

Connect the DC output cable as in Fig. 4.6.

---

**Fig. 4.5 Connecting to AC Supply**

**Fig. 4.6 Connecting the DC Output**

---

**Fig. 4.4 PSU Cover Removal**

5.1 Safety and Certification

Model 4234500 and 4234501 PSUs have been certified intrinsically safe to the requirements of:

ATEX Directive 9/94/EC
[Ex ia Ga] IIIC (–20°C ≤Tas ≤ +55°C)
Cert. BAS 01 ATEX 7041

and MUST be sited in the safe area.

Warning. Interference with any unit or its components implies acceptance by that person of responsibility for ensuring that intrinsic safety continues to be maintained.

Unauthorised repair or incorrect assembly may render any unit unfit for use in an intrinsically safe system.

If the equipment is used in a manner not specified by the manufacturer, the protection provided by the equipment may be impaired.

To ensure that this standard of safety is maintained in operation it is essential that any servicing or similar work on the unit shall be performed only by suitably trained personnel in possession of all necessary information and a knowledge of the relevant standards applicable.

There are no serviceable components in these PSUs other than to replace the fuses. These fuses must be replaced only with those stated in the specification. If a fault occurs the PSU should be returned to the nearest ABB Service Centre, or returned to the factory for repair.

5.2 Cleaning

Warning. Switch off the PSU prior to cleaning.

Use only a dry or damp cloth to clean the exterior of the PSU. Do not use water or any solvents.

5.3 Replacing Fuses – Fig. 5.1

1. Switch off and disconnect the mains supply

2. Remove the four screws and lift off the cover.

3. Replace fuse(s)

4. Replace cover, connect to mains power source and switch on.

Caution. Use only ABB fuses part numbers:
F1 ............ 0231555 (F) (400mA cartridge)
F2 & F3 .... 0231577 (T) (250mA 1500A HBC cartridge)

Client Warranty
Prior to installation, the equipment referred to in this manual must be stored in a clean, dry environment, in accordance with the Company’s published specification. Periodic checks must be made on the equipment’s condition. In the event of a failure under warranty, the following documentation must be provided as substantiation:
— A listing evidencing process operation and alarm logs at time of failure.
— Copies of all storage, installation, operating and maintenance records relating to the alleged faulty unit.
Note
We reserve the right to make technical changes or modify the contents of this document without prior notice. With regard to purchase orders, the agreed particulars shall prevail. ABB does not accept any responsibility whatsoever for potential errors or possible lack of information in this document.

We reserve all rights in this document and in the subject matter and illustrations contained therein. Any reproduction, disclosure to third parties or utilization of its contents in whole or in parts – is forbidden without prior written consent of ABB.
