ELECTRIFICATION SERVICE

# Aftermarket support announcement

## EntelliGuard™ circuit breakers UL (all types)

On December 1, 2022, ABB announced the final lifecycle stage for the EntelliGuard G UL 489 and UL 1066 low voltage power circuit breakers. The intent of this announcement was to continue with the ABB Electrification Smart Power global strategy to move all volume purchases from distributors and OEM partners to the new SACE® Emax2 circuit breaker and Emax2 retrofill solution for aftermarket replacement. The announcement included the following lifecycle dates:

- Classic: July 1, 2022
- Last Time Buy: June 30, 2023
- Limited: July 1, 2023
- Obsolescence: December 31, 2023

Since that announcement, ABB Electrification Service has assumed full ownership of the product to properly support both US and global customers who purchased and received low voltage switchgear with EntelliGuard G circuit breakers throughout last year and up to July 2023.

The US Electrification Service factory in Florence, SC, currently manufactures all EntelliGuard circuit breakers, including the EntelliGuard G, E & R circuit breakers. The Florence facility has the capability to properly maintain and support our US and global customers.

In accordance with ABB Electrification Service global lifecycle management, **the EntelliGuard G circuit breaker is in limited phase as a product with Electrification Service; the product is not obsolete, and all required parts and replacement circuit breakers are fully available.** Spare parts or replacement circuit breakers for existing switchgear with future spaces, and for expanded sections to existing lineups, are available.
