

Dodge® Raptor Elastomeric coupling innovation

The Dodge Raptor coupling features patented WingLock™ technology that increases surface area at the most critical regions of the element, resulting in higher bond strength, improved fatigue resistance, and up to five times longer life than competitive urethane designs. The Raptor's split natural rubber element

allows for easy assembly, reduced maintenance, and significantly decreases total costs. Designed for drop-in interchangeability, Raptor couplings work in many existing applications without any modifications. The Raptor is backed by over 50 years of natural rubber expertise and an industry leading 5-year warranty.
