9.1 Permits and certifications...........................................................................................................................17
1 Safety

Read these operating instructions carefully prior to installing and commissioning the device. These instructions are intended as an overview and do not contain detailed information on all designs for this product or every possible aspect of installation, operation and maintenance.

For additional information or in case specific problems occur that are not discussed adequately in these instructions, contact the manufacturer. The content of these instructions is neither part of any previous or existing agreement, promise or legal relationship nor is it intended to change the same.

All obligations of ABB Automation Products GmbH are created by the relevant sales agreement, which contains the complete and solely binding warranty regulations. These contractual warranty provisions are neither extended nor limited by compliance with this manual.

1.1 General Safety Information

The “Safety” chapter provides an overview of the safety aspects to be observed for the operation of the device.

The device is built based on state-of-the-art technology and is operationally safe. It was tested and left the factory in a proper state. The requirements in the manual as well as the documentation and certificates must be observed and followed in order to maintain this state for the period of operation.

The general safety requirements must be complied with completely during operation of the device. In addition to the general information, the individual chapters of the manual contain descriptions about processes or procedural instructions with specific safety information.

Only the observance of all safety information enables the optimal protection of personnel as well as the environment from hazards and the safe and trouble-free operation of the device.

1.2 Proper use

The TEPI11 signal converter is used for measuring the pressure of non-flammable media. The measurement is transmitted with an impressed current signal of 4 ... 20 mA. In explosion protection applications, the circuit must have an intrinsically safe Ex ib design.

The intrinsically safe design of the TEPI11 must be installed in a suitable housing with a protection class of at least IP 20. Refer to the "Special conditions" in certificate BVS 04 ATEX 178 X.

The device may only be used for the applications listed in these operating instructions and in the data sheet 18-0.15. All other use is improper use.

The highest allowable maximum ambient temperature range of -20 ... 60 °C (-4 ... 140 °F) may not be exceeded during operation.

Repairs, alterations and enhancements or the installation of replacement parts is only permissible as far as described in the manual. Further actions must be verified with ABB Automation Products GmbH. Excluded from this are repairs performed by ABB-authorized specialist shops.
1.3 Technical limits

The device is designed for use exclusively within the stated values on the name plate and in the technical specifications (see "Technical Specifications" chapter and data sheet). These must be complied with accordingly, e.g.:

- The maximum operating temperature may not be exceeded.
- The permitted operating temperature may not be exceeded.
- The housing protection system must be observed.

1.4 Warranty provision

A use contrary to the device's stipulated use, disregarding of this manual, the use of under-qualified personnel as well as unauthorized alterations excludes the manufacturer of liability from any resulting damages. The manufacturer's warranty expires.

1.5 Labels and symbols

1.5.1 Symbols and warnings

Danger – <Serious damage to health / risk to life>

One of these symbols in conjunction with the “Danger” warning indicates an imminent danger. If it is not avoided, death or serious injury will result.

Warning – <Bodily injury>

The symbol in conjunction with the “Warning” message indicates a possibly dangerous situation. If it is not avoided, death or serious injury could result.

Caution – <Slight injuries>

The symbol in conjunction with the “Caution” message indicates a possibly dangerous situation. If it is not avoided, slight or minor injury can result. May also be used for property damage warnings.

Notice – <Property damage>!

The symbol indicates a possibly damaging situation. If it is not avoided, the product or something in its area can be damaged.

Important

The symbol indicates operator tips or especially useful information. This is not a message for a dangerous or damaging situation.
1.5.2 Name plate

Fig. 1

1 Full name of model
2 Order code
3 Serial number
4 Input signal
5 Output signal
6 Serial number

1.6 Operator liability

The operators must strictly observe the applicable national regulations in their countries with regards to installation, function tests, repairs, and maintenance of electrical devices.

1.7 Personnel qualification

The installation, commissioning and maintenance of the device may only be carried out through trained specialist personnel authorized by the plant operator. The specialist personnel must have read and understood the manual and comply with its instructions.

1.8 Returning devices

Use the original packaging or a suitably secure packaging for returning the device for repair or for recalibration. Include the properly filled out return form (see attachment) with the device.

According to EC guidelines for hazardous materials, the owner of hazardous waste is responsible for its disposal or must observe the following regulations for its shipping:

All delivered devices to ABB Automation Products GmbH must be free from any hazardous materials (acids, alkali, solvents, etc.).
1.9 Disposal

ABB Automation Products GmbH actively promotes environmental consciousness and has an operational management system in accordance with DIN EN ISO 9001:2000, EN ISO 14001:2004 and OHSAS 18001. Our products and solutions should have minimum impact on the environment and persons during manufacture, storage, transport, use and disposal.

This includes the environmentally friendly use of natural resources. Through its publications ABB conducts an open dialog with the public.

This product/solution is manufactured from materials that can be reused by specialized recycling companies.

1.9.1 Information on WEEE directive 2002/96/EC (Waste Electrical and Electronic Equipment)

This product/solution is not subject to the WEEE directive 2002/96/EC and relevant national laws (e.g., ElektroG in Germany).

Dispose of the product/solution directly in a specialized recycling facility and do not use the municipal garbage. Only privately used products may be disposed of in the municipal garbage according to the WEEE directive 2002/96/EC. Proper disposal prevents negative effects on people and the environment, and supports the reuse of valuable raw materials.

If it is not possible to dispose of old equipment properly, ABB Service can accept and dispose of returns for a fee.

1.10 Transport safety information

Check the devices for possible damage that may have occurred from improper transport. Damages in transit must be recorded on the transport documents. All claims for damages must be claimed without delay against the shipper and before the installation.

1.11 Storage conditions

The units must be stored in dry and dust-free conditions.

The storage temperature should be between -20 °C (-4 °F) and 70 °C (158 °F).

The storage time is basically indefinite, however, the warranty conditions stipulated in the order confirmation of the supplier are valid.
1.12 Installation safety information

- Only qualified specialists who have been trained for these tasks are authorized to mount and adjust the signal converter TEPI11, and to make the electrical connection.
- When working on the signal converter TEPI11 always observe the locally valid accident prevention regulations and the regulations concerning the construction of technical installations.

1.13 Electrical installation safety information

**Important**

The signal converter TEPI11 has been manufactured and tested in accordance with DIN EN 61010-1 "Safety Requirements for Electronic Equipment" and has been supplied in a safe condition.

The electrical connection may only be performed by authorized specialist personnel according to the electrical plans.

Comply with electrical connection information in the manual. Otherwise, the electrical protection class can be affected.

The secure separation of contact-dangerous electrical circuits is only guaranteed when the connected devices fulfill the requirements of the DIN EN 61140 (VDE 0140 Part 1) (basic requirements for secure separation).

For secure separation, run the supply lines separated from contact-dangerous electrical circuits or additionally insulate them.
The TEPI11 signal converter transforms electrical signals into pneumatic standard signals, e.g., 4 … 20 mA in 0.2 … 1 bar (3 … 15 psi). It is therefore a connecting link between electrical/electronic and pneumatic systems. The patented signal conversion principle is based on the force balance method.

Functionality
The pressure at the input is recorded by the DMS sensor and converted proportionally by the downstream electronics unit to an analog output signal. The electronic unit is designed for two-wire technology, i.e. the power supply and output signal flow across the same wire pair. Secondary equipment such as the display, recorder or controller must be looped into the electrical circuit. A direct current of 15 … 30 V is required for the power supply.
3 Installation

The TEPI11 signal converter has a special mounting base. Due to its universal design, it is suitable for mounting to EN 50022 - 35x7.5, EN 50045 - 15x5 and EN 50035 - G32 rails.

Vertical top-hat rail
For vertical rails, the electrical connection for the device should preferably be on the left.

Horizontal top-hat rail
For horizontal rails, the electrical connection for the device should preferably be facing up.

3.1 Operating conditions at installation site

Important
Prior to mounting check to ensure that the specifications in terms of safety and control applicable to the TEPI11 signal converter will not be exceeded at the installation location. See chapter Technical data, page 15.

3.2 Delivery scope

• Check the delivery for completeness, signs of damage, model and scope immediately upon arrival.
• Check whether the delivery is in accordance with your order.
4 Electrical connection

Important
For electrical installation, the following standards, data and documents must be observed:
• the relevant regulations and safety standards pertaining to the installation and operation of electrical systems.
• the additional regulations, standards and directives governing the installation and operation of explosion-proof systems, if explosion-proof devices are used.
• the values for the electrical connection in section Technical data, page 15.
• for explosion-proof devices also observe the specifications in the explosion protection certificate

4.1 Signal cables

Do not run signal cables close to power lines.

Important
Power lines produce interference in their near vicinity, which impairs the signals transmitted on the line.

4.2 Position of the terminals

The electrical connection is provided by 2-pole screw terminals for cables with a max. cross-sectional area of 2.5 mm² (14 AWG).

4.3 Connection

Do not reverse polarity when connecting the cable.

The supply circuit at the terminals must meet explosion protection requirements for "intrinsically safe" category "ib" devices.

Fig. 3: Functional diagram
5 Pneumatic connection

**Important**

The TEPI11 signal converter must be supplied with instrument air that is free of oil, water and dust.

The purity and oil content should meet the requirements of Class 3 according to DIN/ISO 8573-1.

**Notice - Potential damage to parts!**

Impurities on the cables and signal converter can damage components.

The recommended pipe dimension is 6 x 1 mm. Dust, splinters or any other particles must be blown off the pipe before connecting.

To connect the air pipes, a 1/8 NPT tap hole is provided. We recommend that you use a line with 6x1 mm dimensions.

**Notice - Potential damage to parts!**

Pressure higher than 2 bar (30 psi) can damage the signal converter.

Provisions should be made to ensure that in the event of an error the pressure does not rise above 2 bar (30 psi).

6 Startup Operation

The signal converter is ready for operation immediately after installation and connection. No further adjustment is required.
Important
Note that the supplied instrument air must be free of oil, water and dust according to DIN/ISO 8573-1 to ensure trouble-free operation.

7.1 Readjusting the signal conversion

The signal converters are delivered in an adjusted condition. After longer operating periods, however, the tolerance limits may be exceeded due to aging of the DMS sensor or drift of the electronic unit. This can be eliminated by readjustment.

The signal converter can be readjusted with 2 adjustment screws (see Fig. 4).

EC-Type Examination Certificate

- Directive 94/9/EC -

Equipment and protective systems intended for use in potentially explosive atmospheres

BVS 04 ATEX E 178 X

Equipment: FI-Signal converter type TEPI 11 V18321-500xx

Manufacturer: ABB Automation Products GmbH

Address: D 32425 Minden

The design and construction of this equipment and any acceptable variation thereon are specified in the schedule to this type examination certificate.

The certification body of EXAM BBG Prüf- und Zertifizier GmbH, notified body no. 0158 in accordance with Article 9 of the Directive 94/9/EC of the European Parliament and the Council of 23 March 1994, certifies that this equipment has been found to comply with the Essential Health and Safety Requirements relating to the design and construction of equipment and protective systems intended for use in potentially explosive atmospheres, given in Annex II to the Directive.

The examination and test results are recorded in the test and assessment report BVS PP 04.2140 EG.

The Essential Health and Safety Requirements are assured by compliance with:

EN 50014:1997+A1-A2 General requirements
EN 50020:2002 Intrinsically Safe "T"

If the sign "X" is placed after the certificate number, it indicates that the equipment is subject to special conditions for safe use specified in the schedule to this certificate.

This EC-Type Examination Certificate relates only to the design, examination and tests of the specified equipment in accordance with Directive 94/9/EC.

Further requirements of the Directive apply to the manufacturing process and supply of this equipment. These are not covered by this certificate.

The marking of the equipment shall include the following:

Ex II 2G EEx ib IIC T6

Appendix to

EC-Type Examination Certificate

BVS 04 ATEX E 178 X

15.1 Subject and type

PT Signal converter type TEPI11  Y18331-500xx.

In the complete designation the "xx" are replaced by numbers / letters specifying characteristic curve (driving 4...20 mA / filling 20...4 mA) and pressure range.

The type code may be extended optionally with further designations not relevant to explosion protection characteristic.

15.2 Description

The PT-Signal converter type TEPI11  Y18331-500xx is intended for pressure measuring purposes of non-flammable media and satisfies the pressure signal to an intrinsically safe circuit (4...20 mA current loop).

The PT-Signal converter type TEPI11  Y18331-500xx - explosion-proof case - is designated for installation in a suitable enclosure (degree of protection IP: IP50).

15.4 Test and examination report

BVS PF.04.2449 B4 as of 19.08.2004

15.5 Special conditions for safe use

15.5.1 The PT-Signal converter type TEPI11  Y18331-500xx shall be installed in a suitable enclosure providing a degree of protection IP50 at a minimum.

15.5.2 In case of installation of the PT-Signal converter type TEPI11  Y18331-500xx in an explosive medium of plastics material or light alloy, the material of the enclosure shall comply with clause 7.1.5 of clause 8 EN 50014:1997 respectively.

20/18-47-EN
17.3 Internal wiring within this enclosure shall comply with clauses 6.4.11 and 7.6 of EN 50020:2002.

17.4 Terminals or connectors for the intrinsically safe circuits shall be arranged according to clauses 6.3.1 or 6.3.2 EN 50020:2002, respectively.

We confirm the correctness of the translation from the German original.
In the case of arbitration only the German wording shall be valid and binding.
