

Reducing energy consumption without throwing money at the line

DODGE®

The Dodge® Quantis® product line is a full line of modular gear drives engineered for flexibility, greater torque density in a compact housing configuration, and increased horsepower capability from 0.18 - 55 kW (1/4 to 75 Hp). The Quantis family of products includes three types of gear reducers: In-Line Helical (ILH), Right-Angle Helical Bevel (RHB) and Motorized Shaft Mount (MSM). All three types of reducers are dimensionally interchangeable with major global competitors. The Quantis family offers energy efficiencies of up to 94%, lowering your lifetime costs.
