Retrofit
Bring your drive technology up to date

Our Retrofit service is a fast and efficient way to modernize installed drives, bringing immediate performance and risk management improvements to your plant or process.

Your old generation multidrives such as Sami Star, ACV700 and ACS600 multi and single drives can easily be modernized to the newest ACS880 technology. This service is also available for drives other than ABB.

Three ways to retrofit your drives – What fits you best?

**Standard**
- Standard electrical and mechanical components, and wire sets.
- Selected according to the customer configuration.

**FAST**
- Pre-installed on a frame and tested.
- Includes standard components.
- Just one item to order.

**Tailored**
- Customized design.
- Can use any components.
- Fewer limitations.

What you get...

Reduced investment
By re-using the existing drive’s cabinet, cables and motors, the Retrofit service helps you retain more of your original investment. The existing supply section can also be kept.

Professional project support & execution
ABB-certified engineers are trained and available to carry out your retrofit project.

No production losses
The Retrofit service can be carried out in line with your own production schedules.

Step-by-step installation
If you have a large drives installed base, the Retrofit service can be implemented in phases to avoid lengthy shutdowns.

For you, who...
- Know exactly what you need
- Want to retain your existing drive
- Have limited site access and working space

For you, who...
- May or may not have the capability to use in-house resources for the installation
- Want to rely on ABB’s knowledge to build the configuration
- Wish to retrofit drives in non-ABB cabinets

For you, who...
- Have special requirements according to application needs
- Have limited own know-how and engineering resources
- Know what you want but it is not available as a standard solution
