Genuine parts

• Investing in ABB genuine spares will ensure that your Measurement & Analytic product operates for a longer period without any breakdown.
• Genuine spare parts are specifically designed to meet the requirements of your Measurement & Analytic products.
An important part of the ABB Service business strategy is the ability to supply quickly and efficiently spare parts for current and legacy products from anywhere in the world. Availability of original spare parts is essential for fast and efficient maintenance activities.

This becomes even more critical when the product is nearing the end of its lifecycle.

**Longer Life Expectancy**
Investing in ABB genuine spares will ensure that your Measurement & Analytic product operates for a longer period without any breakdown. The longer the life of your asset and lower the maintenance, the more the genuine parts save you money in the long run.

Non-genuine parts can carry a risk of damaging the other genuine parts that they are connected, which can impact the performance of your asset.

**Reliability**
Using genuine spare parts will reduce the chances of a sudden breakdown. Any breakdown can have dramatic impact on your bottom line, quality of production, and ability to meet production forecasts. Some of which could impact your companies longer term profitability and image.

**Dependable spare parts made easy**
Choose ABB genuine spare parts

We provide customers with the genuine spares and right consumable to make the right maintenance on ABB measurement devices.

Parts and supplies where and when you need them.

**Better Quality**
Genuine spare parts are specifically designed to meet the requirements of your Measurement & Analytic products. They are an exact replacement of the original parts and as such they have to pass similar quality endurance tests to ensure that they are a perfect replacement.
Reducing carbon footprint
At ABB we are committed to maximize the use of environmentally friendly materials and reducing the use of non-reusable packing materials. Utilizing our genuine parts helps your company to further lower their environmental footprint.

Guarantee
Genuine spare parts also come with a 12 month warranty*.

Service after Sales
As a spare parts supplier we also offer additional services like diagnostic assistance, technical support, and troubleshooting services even after the sales. In short, we are responsible to ensure that the new parts function correctly. For you, as a buyer, using genuine parts ensures you have access to our worldwide service network if additional assistance needed.

*Please note: Some parts may have longer warranty. Please inquire with ABB on applicable warranties.

Logistics
As a genuine, OEM supplier we have a well-connected network to many parts of the world to ensure that you get the original spare part as soon as possible. On the other hand, non-genuine suppliers often don’t have the backing of a well-connected logistics organization.

Latest enhanced Spare Parts
As an OEM manufacturer, our R&D department is constantly looking how to improve our products, with the help of new technologies and production processes. Investing in ABB genuine spare parts will ensure the same performance of the original part, but in some cases may also offer improved performance where parts have been upgraded.

To find more about our genuine spare parts contact your local ABB office or Authorized ABB Value Provider. Alternatively visit our website. Links to how to find both are included below.
