1. A listing evidencing process operation and alarm logs at time of failure.

Periodic checks must be made on the equipment's condition.

### 1 PREPARATION

#### 1.1 Checking the Code Number - Table 1.1

Basic Type No.		Mounting & Version		Cell Constant (K)	Process Connection Type	Temperature Compensation
Code Characters						
	1,2		3,4,5	6	7	8
20	Electrolytic conductivity measuring cells	78/	Screw-in (stainless steel)		0 <sup>3</sup> / <sub>4</sub> in. BSP (fitted with plug and socket) 1 <sup>3</sup> / <sub>4</sub> in. BSP 7 <sup>3</sup> / <sub>4</sub> in. NPT 8 <sup>3</sup> / <sub>4</sub> in. NPT (fitted with plug and socket)	0 None 5 Pt100 resistance thermometer

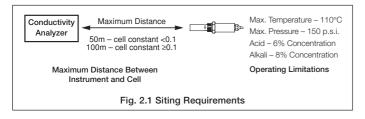

Table 1.1 Checking the Conductivity Cell Code Number

### 2 MECHANICAL INSTALLATION

# 2.1 Siting Requirements - Fig 2.1

Caution. Ensure the integral cable (where applicable) does not touch hot or abrasive objects when the plug is connected to the bulkhead socket.

Note. Allow sufficient clearance for easy removal of cell for cleaning – see Fig. 2.2 for overall dimensions of cells.

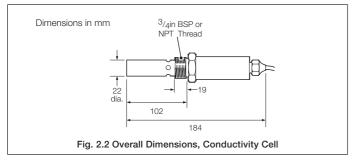

## 2.2 Cleaning the Conductivity Cell

Before installing the conductivity cell, clean the electrodes as follows:

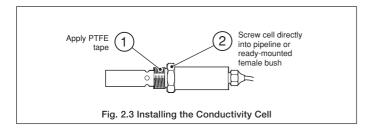

Unscrew the outer electrode and thoroughly clean it with a nylon-bristle brush (supplied) and a warm detergent solution. Clean the central electrode in a similar manner, taking care not to damage it. For more tenacious deposits a 2% hydrochloric acid solution may be used. Rinse thoroughly with distilled water after cleaning. The electrodes should have a dull, frosted appearance which must not be removed by polishing or abrasive cleaning. Refit the outer electrode.

# 2.3 Overall Dimensions, Conductivity Cell - Fig. 2.2

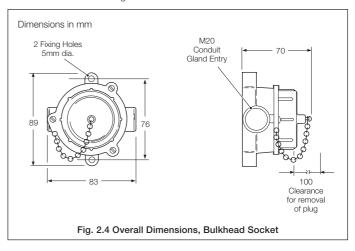

# 2.4 Installing the Conductivity Cell - Fig 2.3

Caution. After cleaning and installing the conductivity cell, ensure it remains filled with liquid and is not allowed to dry out and ensure that the electrode bore remains fully immersed at minimum fluid levels.

### 2.5 Installing the Bulkhead Socket - Fig. 2.4

Mount the socket at a convenient location close to the cell. Refer to Fig. 2.4 for overall dimensions and fixing details.

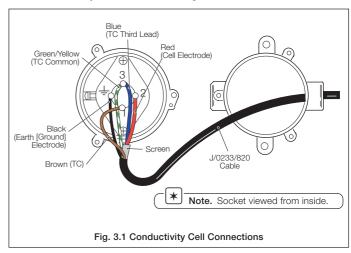

## 3 ELECTRICAL CONNECTIONS

Warning. Before making any connections, ensure that the power supply, any high voltage-operated control circuits and high common mode voltages are switched off

### 3.1 Conductivity Cell to Analyzer Connections

Information. Use cable part no. J/0233/820 to connect the bulkhead socket to the analyzer.

### 3.1.1 Conductivity Cell Connections - Fig. 3.1

### 3.1.2 Analyzer Connections

Refer to the analyzer's User Guide for details of connecting cable J/0233/820 to the analyzer.

### 3.2 Direct Cell-to-Analyzer Connection

If required, the bulkhead socket can be removed from the Model 2078 Conductivity Cell and the cell connected directly to the analyzer. Table 3.1 lists the cell cable core colors and associated cell functions – refer to the analyzer's User Guide for connection details.

Cell Cable Core Color	Cell Function	
Green	TC Common	
Yellow	TC	
Red	Cell Electrode	
Blue	Earth (Ground) Electrode	

Table 3.1 Cell Cable Core Colors and Cell Functions
