Technology and innovation

Innovation is a major driver of technology. It brings about new solutions to both old and new challenges and provides technologies that break new ground in terms of efficiency, productivity or functionality. ABB has a strong commitment to innovation.

For some time now, the last edition of *ABB Review* of every year has been dedicated to innovation, and has typically presented a selection of the company's most significant research and development breakthroughs as well as important product launches. This feature is now being moved to the first edition of the year. The changeover will make it possible to include innovations that occur late in the year, permitting the portrayal of the achievements of a complete calendar year.

Among the innovations to be presented are a new highly-efficient motor, advances in control systems and a customizable lighting concept for the home.
