ABB supplies GSI with a wide variety of motors, Dodge gearing, bearings, and pulleys.

to get such a broad range of products has been a real ad-vantage. “On the commercial side as well as the agricultural side, it’s really important to have custom-made equipment, and by offering both a full line of motors and mechanical products, Dodge can absolutely help us fulfill this requirement,” he says. “It allows us to cherry pick just the right size, style, speed and power, so we can fully comply with customer requirements.”

Customer benefits

Zoltán Németh, plant manager of GSI’s Hungarian operations, says having quick access to Dodge products from Dodge makes a big difference. “Being able to work with one company for all our key products means we can shorten our lead time, easily track orders, better manage our stock, and most importantly, better serve our customers.”

The close relationship with Dodge has helped GSI to meet the growing demand for equipment that meets European ATEX directives for use in explosive environments. (Grain dust poses a well-known risk of explosion.) “As we supply more and more equipment to the European market, there’s a growing demand to be able to supply high-efficiency motors as well as ATEX-certified motors, reducers and bearings,” says Daniel Németh. “Fortunately, Dodge can supply all of these products to us.”

Dániel Németh says he also appreciates the local technical support, including hands-on installation instruction, as well as in-depth product training. “Dodge experts are happy to come to our plant to provide training,” he says. “It is very important for an engineer to understand the product in the smallest detail.”

An RBC Bearings company.

By partnering with ABB, the GSI Hungary facility was able to locally source their preferred Dodge brand of mechanical power transmission products, including this Torque-Arm II shaft mount gear reducer.
