Busch-dynasty®

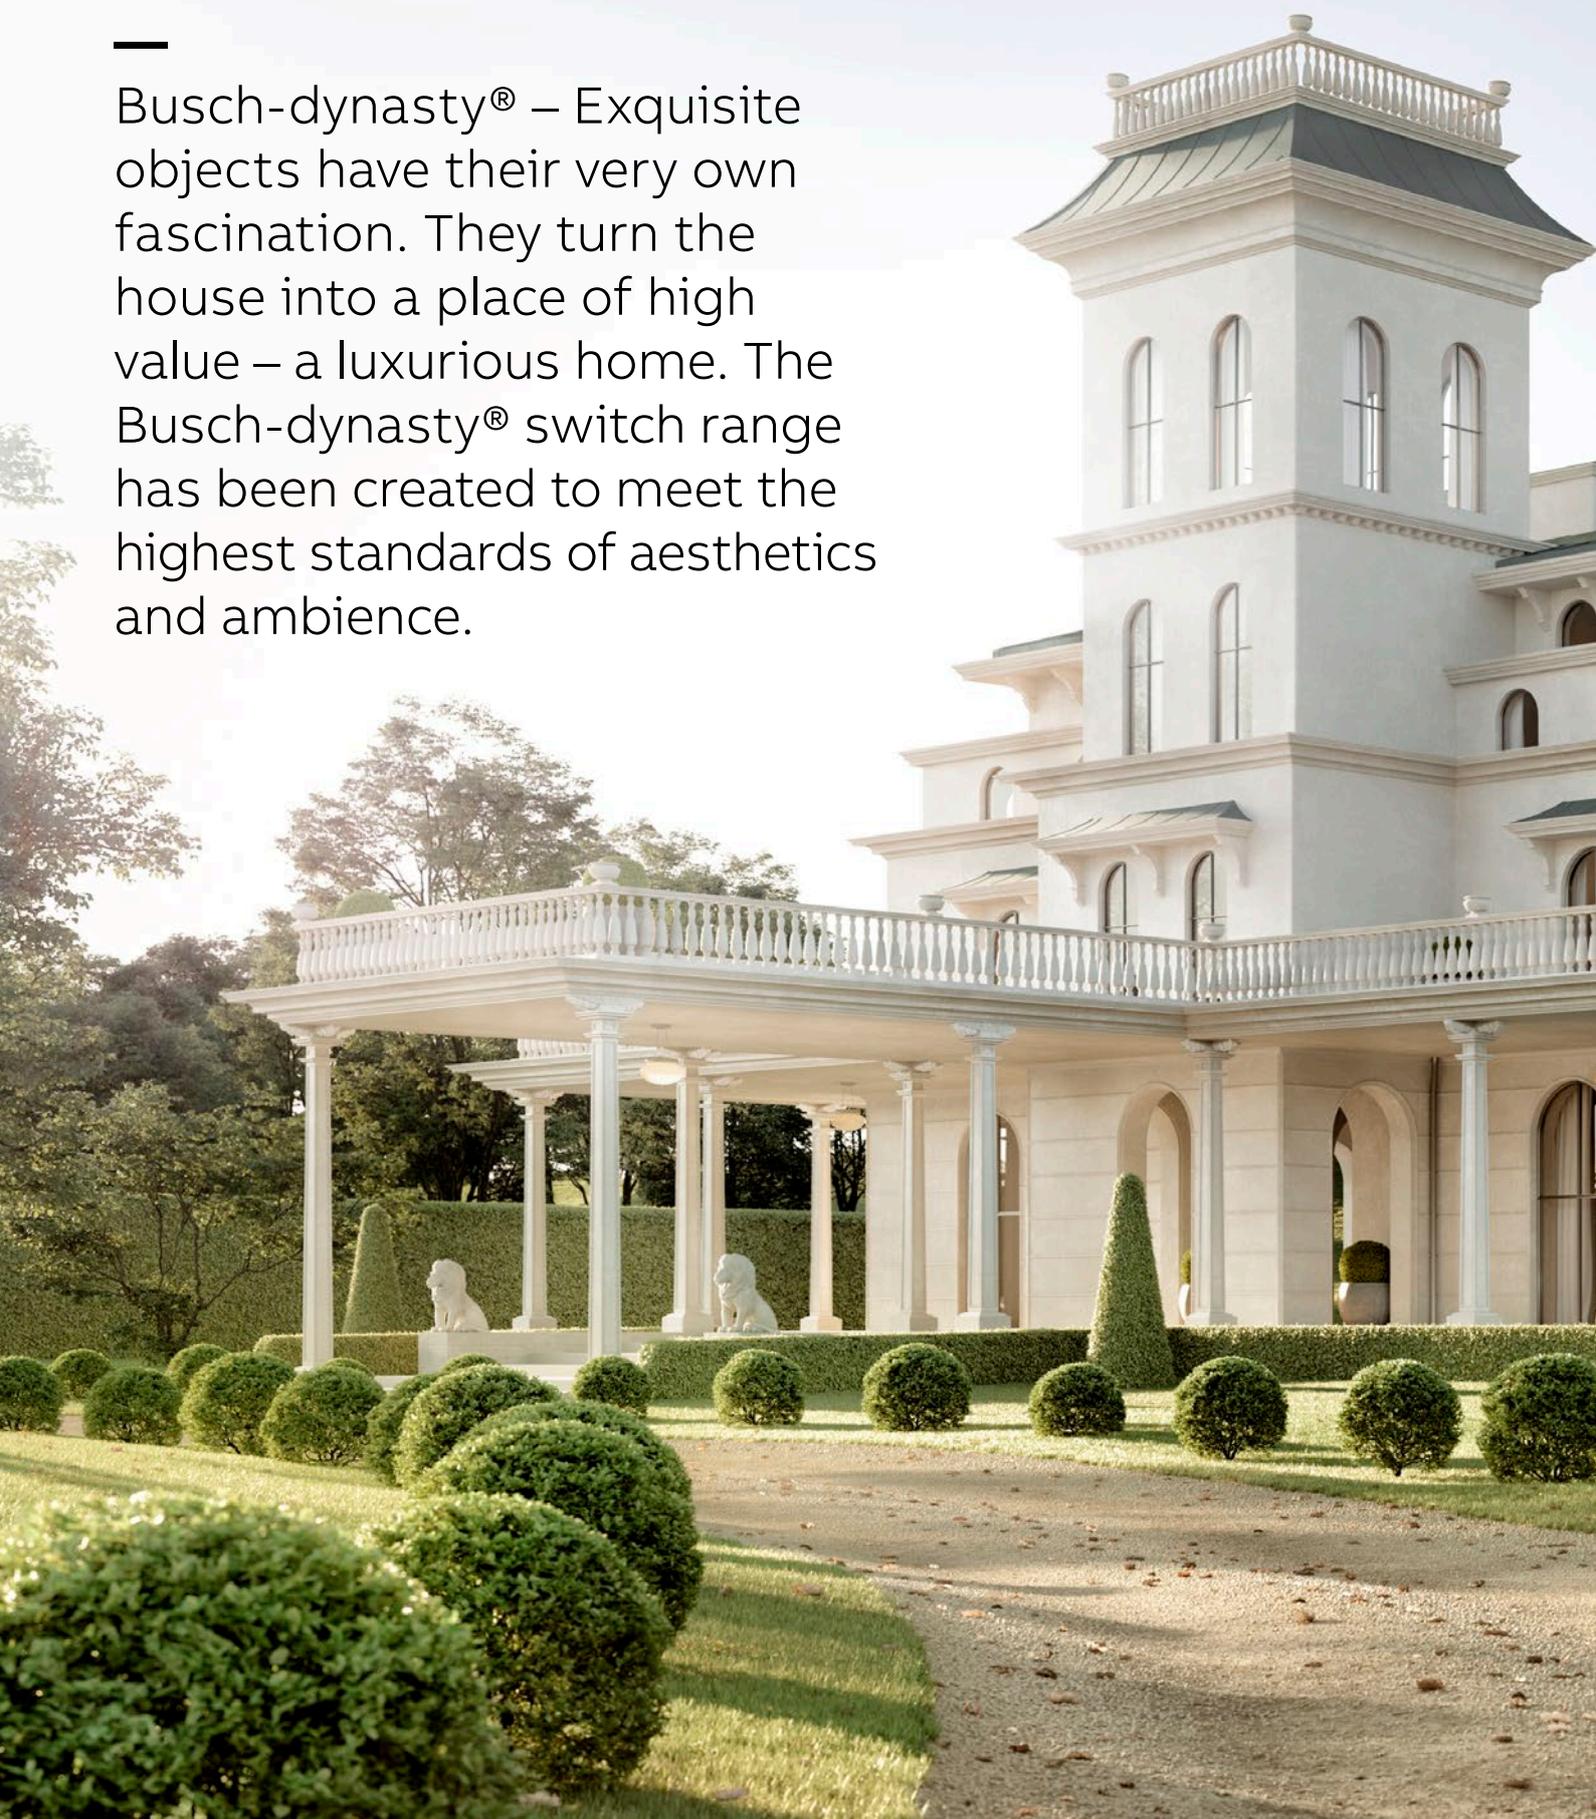

IN A CLASS OF ITS OWN

**The new elegance –
made in Germany**

Busch-dynasty® – Exquisite objects have their very own fascination. They turn the house into a place of high value – a luxurious home. The Busch-dynasty® switch range has been created to meet the highest standards of aesthetics and ambience.

Ornament with history

Like a painting with a stylish frame – artistically decorated and with a fine line. The decor of Busch-dynasty®.

Long time ago a Russian merchant prepares himself for a long journey. He wants to return with gifts for his daughters and asks them what they would like to have. The eldest daughter Darja desires a piece of jewellery made of pure gold. The second daughter Annuschka desires a magnificent mirror made of crystal, mother-of-pearl and silver that will grant her eternal youth and beauty. Aljona desires the purple flower ...

... that never wilts! This flower is the style-setting element of the Busch-dynasty® switch range, because the Alina ornament is based on it. The love for detail lends Busch-dynasty® its unique style. This is how the Alina ornament displays its curved filigree lines. They lead top and bottom to blossoms – and in this way direct attention to the contact points of the rocker switch. The beautiful and useful combine to attain perfection.

Ornaments always add that certain something. With their beauty and grace they transform something practical for daily use into visually appealing objects. To surround oneself with beauty is a pleasure. Because with each sight and each contact it conveys that pleasant touch of luxury. With the ornamentation of Busch-dynasty® an overall cosy and representative ambience can be created. (Based on a Russian fairy tale.)

Quality of the highest standard

One's private living space deserves the very best – for this reason Busch-dynasty® has been developed jointly with international experts for interior design. Concealed behind its perfect shape you will find the most modern technology of the world's top brand leader in home automation. The production of all Busch-dynasty® switches is of the highest standard. This guarantees the long service life of the products.

Unique in design

Each switch is turned into something unique. Because the brass is polished by hand or it is brushed to give it its antique look. The same care is given to the rocker made of high-quality plastic – it too is polished or brushed by hand. German quality and decades of experience by Busch-Jaeger, a member of the ABB Group, are a guarantee for a long service life of these luxury products.

Variation in ivory white

Harmonious combination creates elegant style. Just like this exquisite variation of Busch-dynasty®. A brass frame encloses the floral ornament on a light background. And uniquely sets the button into the scene.

—
Always the first choice – the materials leave nothing to be desired. The various options for combining result in individual pieces crafted by hand.

—
With a spirit of perfection and love for detail – each switch is handcrafted and unique. This process underscores the value of the product.

Exclusive and extravagant

Gold shines at its best when contrasted. This is seen most impressively in the composition of probably the most noble nuances – black and gold. This combination has an excellent effect on almost all backgrounds. A real ornamental gem for every wall.

Stylish in every detail

A magnificent masterpiece with a finely painted ornament on delicate anthracite. Framed with an antique brass edge. This transforms every room into a gallery of beautiful arts.

—
Expression of personal style –
the colour and haptics raise
the value of each living space
and accentuate the luxurious
ambience and taste of the owner.

— High-quality standard – the value of the materials reflects the high standard of the owner. Whether brass shines or is antique, it reevaluates each room in its own unique way.

Quality to touch

Inspired by the elegance of the castles and royal palaces of princes of the rococo style – this is how the frame with the ivory shades bordered with gold displays itself. This range is especially suited for rooms with a certain ease.

Design in its most beautiful form

The harmonious interaction with artfully designed walls is what distinguishes this single-colour range. The design remains elegantly subdued. This allows wallpaper patterns or wall paintings of a special lavish design to display their effect.

—
The interaction of design and room – the clear subdued elegance of the switch blends harmoniously with the design of the room, accentuates distinctly or allows other elements to take first place.

Floral extravagance
