Benefits

- Conversion of one simple, non-redundant PROFIBUS line into two reciprocally redundant lines A/B
- Use on PROFIBUS DP/FMS lines
- Automatic line selection
- Transmission rate
  9.6 kBit/s ... 12 MBit/s
- Monitoring of communication
- Repeater functionality
- Redundant power supply
- Status and error display
- Monitoring of the power supply
- Potential-free alarm contact
- Simple assembly on DIN mounting rail
- CE, UL/CSA and Germanischer Lloyd certified
**Features**

You can position the module directly after a master, before a bus segment with several slaves or before an individual slave. PROFIBUS stations with redundant couplers [K] can be directly connected to the PROFIBUS set redundant by RLM01. Stations with only one interface can be optionally assigned to the A or B line. Each RLM01 PROFIBUS interface can serve up to 31 PROFIBUS stations. Using repeaters [R] and media converters [O/E] makes it possible to increase the length of the PROFIBUS lines and the number of stations.

**Function**

The three RS 485 interfaces of the module support all transmission rates specified in DIN 19245 for the PROFIBUS from 9.6 kBit/s to 12 MBit/s. The module has repeater functionality, i.e., it regenerates the signal shape and the amplitude of received data. RLM01 monitors all three lines A, B and M for activity and error states. Detected errors are signalled by lit diodes on the front panel. The potential-free alarm contact activated in parallel to this can be polled for diagnostic purposes by the process control system PCS or by a programmable logic control PLC.

The first data coming in over line A or line B with a correct telegram start are routed to terminal M. With simultaneity, either line A or line B is selected at random. Testing and selection is always based on the first character. In the case of a telegram start with error on A, the control logic switches to the redundant line B. The same procedure applies vice-versa for line B.

Data coming in over line M with a correct telegram start are routed in parallel to the two terminals A and B. The test for data is always based on the first character. In the case of a telegram start with error, the control logic does not output any data to A and B.

Either a single or a redundant power supply with 24 VDC is possible. The distribution of load across L1+ and L2+ is based on the level of the voltages applied. If a voltage source fails, the switch to the redundant supply source is made without interruption. A monitoring logic circuit tests whether both voltages are present.

RLM01 is certified for applications on ships and maritime systems by the Germanic Lloyd (GL). To keep the increased requirements regarding EMV and overvoltages RLM01 needs - depend upon supply (single / redundant) - one or two “24 VDC power pack filter (Surge)”.

**Note:** Further information see User Instructions RLM01, document number: 3BDD011600R.

**Construction**

Three Sub-D connectors A, B and M are located on the front panel of the RLM01 for connection of the PROFIBUS cable. The 8-pin male multi-pin connector with the associated terminal strip is used to connect the alarm and power supply wires. There are also LEDs for activity/error display, a rotary switch for setting the transmission rate and a reset button (activate transmission rate).

### Technical data:

#### Serial interfaces
- Connections: A, B and M
- Transmission rate: 9.6 kBit/s to 12 MBit/s
- Type: RS 485
- Connection: 9-pin Sub-D connector
- Electrical isolation: To VDE 0110, functionally isolating 500 Veff
- Test voltage: 3

#### Data telegram delay
- A/B ==> M: 11 Bit times [us] + 0.6 us
- M ==> A/B: 4 Bit times [us] + 0.6 us

#### Power supply
- Operating voltage: 24 VDC (+20 .. +33 V)
- Power consumption: 150 mA typically at 24 V
- Power loss: Approx. 3.6 W
- Connection: 8-pin terminal strip
- Wire cross section: 0.14 ... 1.5 mm²

#### Ambient conditions
- Operating temperature: 0 ... 50°C
- Transport / storage temperature: -30 ... 85°C
- Relative humidity: Max. 75% non-condensing in operation

#### Alarm contact
- Function: Open in case of error
- Switching voltage: < 60 VDC
- Switching current: Max. 1A
