CATALOG

ABB drives for HVAC
ACH580, 0.75 to 500 kW, 1 to 700 hp
Comfort. It’s something we take for granted in the buildings we live and work in. But comfort requires efficient systems to control heating, ventilation, and air conditioning (HVAC) to ensure the air we breathe is pure and the temperature is comfortable. We also need to ensure air quality and safety in the most energy-efficient and cost-effective way in both normal and mission-critical situations.

For half a century, ABB has been leading the way in optimizing HVAC systems using drive control to ensure that you can take comfort for granted. The new ACH580 series of variable-frequency drives (VFDs) provide the quality, reliability, and energy savings you expect, and are easy to use and safe to maintain. All you need to do is to set the drive up, and then focus on what counts.

34 A lifetime of peak performance
The next step in HVAC drives

The new ACH580 drives come with a range of advanced features, such as a new primary settings menu that makes commissioning the drives much easier and faster. Bluetooth connectivity offers improved accessibility for drives in remote areas and increases safety by letting users stay out of arc flash zones.

Simple to select, install and use
All the essentials – such as chokes, EMC filters, cabling clamps, certified BACnet communication, and enclosures from IP21/UL (NEMA) Type 1 to IP55/UL (NEMA) Type 12 – are a standard part of the drive, simplifying selection, installation, and commissioning.

Safe maintenance
The new packaged disconnect solution provides a main disconnect switch, further increasing safety for people working on air-handling units.

Motor control options to meet your application needs
ACH580 drives can be integrated with several types of AC motors, even high-efficiency permanent magnet (PM) and synchronous reluctance (SynRM) motors. Using these motors can reduce your energy costs even more.

Additional I/O options
Take advantage of the added flexibility and accessibility – never be without back-up I/O points at the job site again.
ACH580 drives are ideal for the HVAC fans, pumps, compressors, air-handling units, and chillers used in hospitals, data centers, shopping centers, tunnel ventilation, factories, office buildings, and more.

Intuitive control panel
The drive’s HVAC-specific software, intuitive keypad with customizable text, and menu-driven programming simplify setup and operation of even the most complex applications. You can customize the view so that it only shows the information you need, and it automatically saves a backup of your most recent configuration so that it’s always available.

Optional Bluetooth® capability
ABB’s new HVAC Bluetooth control panel lets you commission the drive remotely, safely outside the arc flash boundary. The Drivetune smartphone app allows you to commission and tune the drive from a distance, giving you access to the same primary settings and other menus available on the drive’s HVAC control panel.

Reliable communication
BACnet MS/TP, Modbus RTU and N2 are embedded in every ACH580. In addition, a wide range of optional fieldbus adapters are available to enable connectivity with all major building automation and control systems.

Harmonic mitigation
The drive provides reduced harmonics with built-in, second-generation swinging choke technology in a small and lightweight design.

Optional ultra-low harmonics (ULH) for a clean network
The revolutionary ACH580 ultra-low harmonic drive is designed specifically for the HVAC market, minimizing the effect of harmonics on your system. This all-in-one solution is fully integrated with the ACH580 platform and leverages the same programming tools, user settings, options, and functions, while providing superior harmonic performance.
Premier air handling

We understand the complexity of air handling systems and the need to produce high levels of comfort, control, and safety. Regardless of the season or external conditions, we help make your system efficient, safe, and informative.

Effortless system startup
The ACH580 ensures a smooth, coordinated start to your HVAC system. Embedded interlock logic enables the drive to confirm that equipment such as dampers are in the right position and sensors are showing the correct status before operations begin. The Drive Composer PC tool simplifies the use of the drive, and the control panel’s primary settings menu and built-in assistants speed up commissioning, allowing basic setup to be completed in minutes.

Increased energy savings
Achieve increased energy savings by using the appropriate motor and drive combination. The ACH580 drive works with induction, PM, or SynRM motors, enabling high efficiencies.

Improved safety
Built-in safety functionality, such as override mode, enables your system to ignore all non-essential faults during emergencies to maintain air quality in the fire exit paths.
The keypad’s optional Bluetooth capability provides an extra level of safety for commissioning and troubleshooting.

**Reduced costs**
The ACH580 reduces costs, for example by eliminating dependencies on external controllers. The drive can use its internal PID loops to maintain a pressure setpoint by checking the active pressure and adjusting the fan speed accordingly.

**Improved monitoring and maintenance**
Leverage advanced system monitoring, giving you access to data on all aspects of the operation. Use this information to plan maintenance based on the actual needs of the application. For example, with built-in monitoring, the drive lets you know when it’s time to take action if a fan stalls, a belt breaks, a filter clogs, and more.
Precise water flow control

Controlling the flow of chilled water in HVAC systems allows you to regulate temperatures in a building. Pumps, chillers, and cooling towers all need to be coordinated. Your system benefits from motor control that operates as efficiently and simply as possible, with functions designed to keep the flow rate in line with the needs of the chiller and the building.

Motor monitoring prevents problems
Protect your investment with onboard monitoring. Monitor and show trends of key attributes for preventative maintenance.

Protect your equipment
Extend the life of your equipment (e.g. pipes, motors, check valves, and pumps) with intelligent motor control. By starting the pumping system smoothly, you protect the system from pressure surges, and can precisely manage the flow and the pressure.
Energy savings through intelligent control
Intelligent motor control replaces throttle or bypass valves, enabling better control of flow, and resulting in energy savings. In addition, fewer mechanical parts means minimal wear and tear on the system. For additional savings, pair drives with premium-efficiency motors and enable energy optimizer functions to reduce operating costs over the lifetime of the pumping system.

System optimization
As demand fluctuates during the day, the system automatically adjusts. The ACH580 provides optimal pressure when needed, and goes into sleep mode when it’s not. For example, if the chiller shuts off as demand varies throughout the day, the pump can go into standby.
ACH580 drives offering

No matter the frame size or power, all ACH580 drives offer ease of use, scalability, and quality.

Wall-mounted drives, ACH580-01
ACH580-01 wall-mounted drives are available in IP21/UL (NEMA) Type 1 to IP55/UL (NEMA) Type 12 protection class with a power range up to 250 kW/350 hp and offer side-by-side, flange, and horizontal mounting options. The IP55/UL (NEMA) Type 12 variants are designed for applications exposed to dust, moisture, vibration, and other harsh conditions. The ACH580-01 is a six-pulse drive that includes a second-generation swinging choke for harmonic mitigation.

Drive modules for cabinet installation, ACH580-04
ACH580-04 drive modules are perfect for system integrators, cabinet builders, and OEMs who want to optimize cabinet design in the 250–500 kW range without compromising on easy installation, commissioning and maintenance. The ACH580-04 module has an embedded choke for harmonic mitigation.

Cabinet-built drives, ACH580-07
Cabinet-built ACH580-07 drives are available with IP21 protection class as standard (with optional IP42 and IP54 enclosures) in frame sizes R6 to R11. The drives feature a new cooling arrangement and a high-quality, global cabinet design. Available in a power and voltage range of 75–500 kW and 3-phase, 380–480 V. ACH580-07 drives always have chokes for harmonic mitigation built-in.

Ultra-low harmonic drives, ACH580-31
ACH580-31 ultra-low harmonic drives help to keep the power network clean. With harmonics mitigation built into the drive, the ultra-low harmonic drive produces exceptionally low harmonic content. This provides significant benefits, including improved reliability and increased energy savings, as well as extended equipment lifetime.
The ACH580 drives series provides common features throughout the whole product family, making it easy for you to install, commission, and use them for your entire installation.
Overcome challenges of harmonics

ACH580 ultra-low harmonic drives have excellent harmonics performance and are perfectly suited for places that cannot handle high harmonic content in the network.

The problem with harmonics
Generators in power plants rotate at constant and regulated speed, resulting in a sine-wave-shaped current in an AC grid in the ideal case.

However, in the modern world, the network is not pure sine wave. Electricity networks are affected by harmonics: higher-order oscillations introduced by various types of electrical equipment.

Harmonics in the electrical system can have negative effects, such as overheating or malfunctioning network components, including transformers or other equipment in the same grid. Even with 40% THDi, there is still approximately 35 percent over-dimensioning needed for the transformer.

All-in-one concept for a clean network
ABB’s HVAC ultra-low harmonic (ULH) drives are designed with built-in harmonic avoidance systems and help your system to meet IEEE519 and G5/4 harmonic recommendations. By equipping the drives with specific features and capabilities, the problems caused by harmonics are avoided in the first place.

There is no need for external harmonic filters or multi-pulse transformers, leading to significant savings in the footprint. Compared to other harmonic mitigation solutions, ULH drives have excellent harmonic performance, ensuring that the current harmonics in undistorted networks and at nominal load are below 3 percent.

Full HVAC functionality and clean supply (THDi less than 3%)
Savings on investments and during the lifetime
Reliability for your facility
Simple to install – three wires in, three wires out. No external hardware required.
ULH drive technology
With an integrated design that leverages drive technology as part of the harmonic solution, there is no risk of nuisance trips due to incompatible components, no need for additional hardware, and no additional cooling requirements.

Lower energy consumption at system level
ABB’s HVAC ULH drives reach a unity power factor, indicating that electrical energy is being used efficiently. Active power factor compensation allows the ULH drive to improve the power factor of the building grid, while maintaining the unity power factor on the connected equipment.

Reliable operation under special conditions
ULH drives ensure that the motor receives the full voltage, even in low-voltage utility conditions. Thanks to the drives’ capability to provide an output voltage up to 15 percent greater than the supply voltage, applications can overcome voltage drops caused by long supply or motor cables. All this is done without costly additional equipment or oversizing of drive system components.

Other ways of mitigating harmonics
Passive filter equipment must always be sized for the maximum current, but the duration of partial-load operation is very significant. Oversizing gives poor mitigation performance and high running costs when running at partial load. It is also a waste of money, as it does not mitigate harmonics properly under partial-load conditions.

With multipulse transformers, you always need to install additional transformers, and the mitigation level isn’t at the same low level as in a ULH drive.

Of course, needs for mitigation vary and there is no one-size-fits-all solution.
Common characteristics of the ACH580 drives family

**ACH580 series**

**HVAC control panel with primary settings**
- Primary settings makes commissioning the drive easier than ever before
- The optional Bluetooth-enabled control panel allows easy smartphone connection and remote support possibilities
- Easily available USB interface for PC and tool connection
- Help button for problem-solving

**HVAC communication protocols**
- The most common HVAC communication protocols – BACnet MS/TP, N2 and Modbus RTU – as standard
- BACnet/IP with an internal option

**ATEX-certified PTC thermistor support**
- Extensive I/O connections for flexible configuration in various applications
- Colored terminals for easy configuration

**Ingress protection**
- ACH580 drives are available in multiple different IP and UL/NEMA classes. Check the details at the end of this catalogue.

**Shared features of the ABB all-compatible drives portfolio**

**Drivetune smartphone app**
- The Drivetune smartphone app together with the Bluetooth-enabled control panel allow you to set up and commission the drive remotely from a safe and comfortable location, using the same primary settings menu that is available on the control panel on the drive.

**Integrated and certified Safe Torque Off (STO)**
- Certified Safe Torque Off helps to build functionally safe HVAC machines, and you can prove the SIL level
- Embedded STO is of SIL 3/PL e
COMMON CHARACTERISTICS OF THE ACH580 DRIVES FAMILY

Energy efficiency calculators
- Optimize energy efficiency with features that help you to save and manage energy. You can monitor the hourly, daily cumulative, last hour, last day and last month energy consumption via kWh counters.

Diagnostic menu
- Analyze and resolve issues with the control panel’s diagnostics menu. You can quickly analyze why the drive is performing as it is; running, stopped or running at the present speed.

Embedded load analyzers
- Analyze and optimize the application with the load profile log, which shows how the drive has been operating.

EMC/RFI category C2
- The EMC category C2 level design allows installation in commercial and residential buildings: the “first environment.”

Reduced motor noise
- Spreading the switching frequencies over a user-specified range

Integrated process control
- Reduce costs with the built-in, standalone loop controllers. They make HVAC drives a self-governing unit requiring only an external feedback signal. No external controllers are necessary.

Flexibility in programming
- Scale up and customize the drive to the needs of your application with flexible parameter pointers or visual adaptive programming.

Extensive I/O capabilities
- ABB HVAC drives have the same extensive number of I/O terminals in standard configuration
- Colored terminals and clear terminal marking significantly ease drive wiring process
- I/O status can be monitored via the I/O menu
- I/O can be forced on or off to verify the drive’s programming

Same PC tools for ABB all-compatible drives
- Drive Composer entry available for free at www.abb.com
- Same parameter structure makes the all-compatible platform easy to use

Connectivity
- ABB’s F-series fieldbus adapters can be used throughout the all-compatible platform
- Mobile phone connectivity via the optional Bluetooth assistant control panel
- Fieldbus settings are made easy with the primary settings menu
How to select a drive

This is how you build up your own ordering code using the type designation key.

1. **Start by identifying your supply voltage.**
   This tells you what rating table to use. See pages 18 and 19.

2. **Choose the power and current rating of your motor** from the ratings tables on pages 18 and 19.

3. **Select your drive’s order code** from the rating table based on the nominal current rating of your motor.

4. **Choose your options** (on page 23) and add the option codes to the drive’s order code. Remember to use a “+” sign before each option code.

## Motor control

- Scalar and vector

## Supported motor types

- Asynchronous motor
- Permanent magnet motor (vector)
- SynRM (vector)

## Environmental limits

### Transportation and storage temperature

-40 to +70 °C

### Operation temperature

- ACH580-01, ACH580-31: -15 to +50 °C
- ACH580-04: -15 to +55 °C
- ACH580-07: 0 to +50 °C

### Relative humidity

5 to 95 % no condensation allowed

### Altitude

Rated current available at 0 to 1000 m
- Reduced by 1% per 100 m over 1000 m up to 4000 m

## Degree of protection

- ACH580-01 and ACH580-31: IP21 (UL Type 1) or IP55 (UL Type 12)
- ACH580-04: IP00, IP20
- ACH580-07: IP21 as standard, IP42 or IP54 as option

## Contamination level

- Operation at Class 3C2, Class 3S2 according to IEC 60721-3-3
- Transportation at Class 2C2, Class 2S2 according to IEC 60721-3-3

## Inputs and outputs (standard configuration)

#### 2 analog inputs

Selection of Current/Voltage input mode is user programmable.

#### Voltage signal

- 0 (2) to 10 V
- \( R_{in} \geq 200 \, \Omega \)

#### Current signal

- 0 (4) to 20 mA
- \( R_{in} = 100 \, \Omega \)

#### Potentiometer reference value

- 10 V ±1% max. 20 mA

#### 2 analog outputs

- AO1 is user programmable for current or voltage.
- AO2 current

#### Voltage signal

- 0 to 10 V
- \( R_{sens} \geq 100 \, \Omega \)

#### Current signal

- 0 to 20 mA
- \( R_{sens} = 500 \, \Omega \)

## Internal auxiliary voltage

- 24 V DC ±10%, max. 250 mA

## 6 digital inputs

- 12 to 24 V DC, 24 V AC, Connectivity of PTC sensors supported by a single digital input, PNP or NPN connection (5 DIs with NPN connection).

## 3 relay outputs

- Maximum switching voltage 250 V AC/30 V DC
- Maximum continuous current 2 A rms

## Supported thermistors

- Any of the analog inputs, or digital input 6, are configurable for PTC with up to 6 sensors.
- Both analog outputs can be used to feed the PT100, PT1000, KTY83, KTY84 or Ni1000 sensors.

## External power supply

### Standard:

- ACH580-01 frames R6-R9: 1.5 A at 24 V AC/DC ±10%
- ACH580-04 all frames: 1.5 A at 24 V AC/DC ±10%
- ACH580-07 all frames: 1.5 A at 24 V AC/DC ±10%
- ACH580-31 all frames: 1.5 A at 24 V AC/DC ±10%

### With option:

- RL-5 (up to 55 kW): 1.04 A at 24 V AC/DC ±10%

## Communication

### Protocols as standard (EIA-485):

- BACnet MS/TP, Modbus RTU and N2
- Available as 2-port plug-in options: BACnet/IP, Modbus TCP, PROFINET, EtherNet/IP, EtherCAT, EtherNet POWERLINK.
- Available as plug-in options: CANopen, DeviceNet.
- Available as an external 2-port option: EtherNet adapter for remote monitoring.

## Application functions

- First start assistant
- Primary settings for HVAC applications
- Hand-Off-Auto operation mode
- Start interlock (de-frost)
- Delayed start
- Run permissive (damper monitoring)
- Override operation mode
- Real-time clock (scheduling)
- PID controllers for motor and process
- Motor flying start
- Motor preheating
- Energy optimizer and calculators

## Protection functions

- Overvoltage controller
- Undervoltage controller
- Motor and motor cable earth-leakage monitoring
- Motor and motor cable short-circuit protection
- Motor overtemperature protection
- Output and input switch supervision
- Motor overload protection
- Phase-loss detection (both motor and supply)
- Under load supervision (belt loss detection)
- Overload supervision
- Stall protection
- Loss of control reference

## Product compliance

- CE
- RoHS directive 2011/65/EU
- RoHS directive 2011/65/EU
- Quality assurance system ISO 9001 and Environmental system ISO 14001
- Waste electrical and electronic equipment directive (WEEE) 2002/96/EC
- Galvanic isolation according to PELV UL, EAC, RCM, cUL
- TÜV Nord (safety functions)

## Harmonics compliance

- Built-in swinging choke as standard in ACH580-01 meets the requirements of IEC 61000-3-12:2011.
- ACH580-31 helps system to comply with IEEES19 and G5/4 requirements.
- EMC according to EN 61800-3:2004 + A1:2012
- Frames R1 to R9 (up to 250 kW) designed to comply with EMC category C2 requirements as standard. Frames R10 and R11 (up to 500 kW) comply with category C3 with standard pre-configured built-in filter.

## Functional safety

- SIL 3/PL e

## Galvanic isolation according to PELV

- UL, EAC, RCM, cUL
- TÜV Nord (safety functions)

### Nominal ratings

- $I_n$: Rated current available continuously without overloadability at 40 °C.
- $P_n$: Typical motor power in no-overload use.

### Light-duty use

- $I_{ud}$: Continuous current allowing 110% $I_n$ for 1 minute every 10 minutes at 40 °C.
- $P_{ud}$: Typical motor power in light-duty use.

The ratings apply at +40 °C ambient temperature. For derating at higher altitudes, temperatures or switching frequencies, see the HW manuals, document codes: 3AXD5000044839, 3AXD5000048685, 3AXD50000105090 and 3AXD50000037066.

ACH580 standard I/O diagram

Default control connections

1. Panel port (PC tools, control panel)
2. ABB drive customizer port for programming the drive without mains
3. Analog inputs (2 × AI)
4. Analog outputs (2 × AO)
5. 24 V DC output
6. Digital inputs (6 × DI)
7. Safe torque off (STO)
8. Embedded fieldbus
9. Communication options (Fieldbuses)
10. I/O extensions
11. Relay outputs (3 × RO)
12. Mains connection
13. Motor connection

Terminal | Meaning | Default connections
---|---|---
X1 | Reference voltage and analog inputs and outputs |
1 | SCR | Signal cable shield (screen)
2 | AI1 | Output frequency/speed reference: 0 to 10 V
3 | AGND | Analog input circuit common
4 | +10 V | Reference voltage 10 V DC
5 | AI2 | Actual feedback: 0 to 20 mA
6 | AGND | Analog input circuit common
7 | AO1 | Output frequency: 0 to 10 V
8 | AO2 | Motor current: 0 to 20 mA
9 | AGND | Analog output circuit common

X2 & X3 | Aux. voltage output and programmable digital inputs |
10 | +24 V | Aux. voltage output +24 V DC, max. 250 mA
11 | DGND | Aux. voltage output common
12 | DCOM | Digital input common for all
13 | DI1 | Stop (0)/Start (1)
14 | DI2 | Not configured
15 | DI3 | Constant frequency/speed selection
16 | DI4 | Start interlock 1 (1 = allow start)
17 | DI5 | Not configured
18 | DI6 | Not configured

X6, X7, X8 | Relay outputs |
19 | RO1C | Damper control 250 V AC/30 V DC 2 A
20 | RO1A | Energize damper 19 connected to 21
21 | RO1B | Running 250 V AC/30 V DC 2 A
22 | RO2C | Running 22 connected to 24
23 | RO2A | Fault (-1) 250 V AC/30 V DC 2 A
24 | RO2B | Fault condition 25 connected to 26
25 | RO3C |
26 | RO3A |
27 | RO3B |

X5 | Embedded fieldbus |
29 | B+ | Embedded fieldbus, EFB (EIA-485)
30 | A- |
31 | DGND |
32 | TERM | Termination switch
33 | BIAS | Bias resistors switch

X4 | Safe torque off |
34 | OUT1 | Safe torque off. Factory connection.
35 | OUT2 | Both circuits must be closed for the drive to start. See chapter The Safe torque off function in the hardware manual of the drive.
36 | SGN | |
37 | IN1 |
38 | IN2 |

X10 | 24 V AC/DC |
40 | 24 V AC/DC+ in | R6 to R11 and all ACH580-31: Ext. 24 V AC/DC input to power up the control unit when the main supply is disconnected.
41 | 24 V AC/DC- in |

Notes:
1) Ground the outer shield of the cable 360° under the grounding clamp on the grounding shelf for the control cables.
2) Connected with jumpers at the factory.
Options

Controlling your drive remotely eliminates the need to be at the drive to make adjustments. Accurate remote diagnostics are possible through the building management system (BMS), which enables real-time monitoring. Total building system costs are reduced thanks to the reduced wiring and number of building automation I/O points, and the ability to use passthrough I/O.

Input/output extension modules

Standard input and output can be extended by using optional analog and digital input/output extension modules.

BACnet/IP option

Native BACnet/IP allows for greater bandwidth for more frequent polling/monitoring and more devices on the same sub-network. Thanks to the two-port design of this adapter, the need for external switches is reduced and installation time is shortened. Different buildings may have different fieldbuses, and we have multiple option modules to satisfy your needs.

Control panel options

The HVAC control panel (ACH-AP-H) is included as standard in the delivery unless otherwise specified.

Wireless connectivity

With the Bluetooth-enabled assistant control panel, you can commission, start, stop, and monitor the drive, and reset faults from different devices such as tablets.
ABB Ability™ smartphone apps

Better connectivity and user experience with Drivetune

- Startup, commission and tune your drive and application
- Instantly access drive status and configuration with a simplified user guidance
- Optimize performance via drive troubleshooting features
- Create and share backups and support packages

Services and support on the go with Drivebase

- Access your product and service information in the cloud from anywhere
- Use dynamic QR code to troubleshoot your drive
- View your drives installed base and plan service activities
- Report service events

Access information anywhere

Download the apps using the QR codes below or directly from the app stores

**Drivetune** for commissioning and managing drives

**Drivebase** for ensured reliability and reduced downtime on production sites
High protection for operation in harsh environments

Thanks to the drive’s wall-mountable construction in both IP21 and IP55 configurations the ACH580-01 can be installed in clean rooms, and even dusty and wet environments. The cabinet-built variant comes with IP21 as standard and is also available with IP42 and IP54 protection classes for use in harsh environments.

The robust, protective design ensures that no additional enclosures or components, such as dust filters and fans, are needed. Overall, drives for harsh environments require smaller capital expenses by avoiding or advancing maintenance of external components, which in turn improves the reliability of the drive and the process.

Reduced panel cooling need

The ACH580-01 wall-mounted drive offers flange mounting as an option, separating the control electronics from the main circuit cooling airflow, saving space and ensuring optimal cooling. This results in better thermal management during panel installation and reduces the overall enclosure size. Furthermore, the need for air-conditioning can often be eliminated, as up to 80 percent of the heat load is removed through the back of the panel.

Advanced cooling

The simple and robust design of the ACH580-07 cabinet-built drive ensures reliable operation, even in harsh environments. The flange-mounting feature is standard for the cabinet-built ACH580 drive, which separates the heat-generating power electronics from the more sensitive control electronics and extends the product’s lifetime. The hot air can be ducted away from the motor control center, reducing the need for air-conditioning significantly.
**du/dt filters**

du/dt filtering suppresses inverter output voltage spikes and rapid voltage changes that stress motor insulation. Additionally, du/dt filtering reduces capacitive leakage currents and high-frequency emissions from the motor cable as well as high-frequency losses and bearing currents in the motor. The need for du/dt filtering depends on the motor insulation. For information on the construction of the motor insulation, consult the manufacturer. More information on du/dt filters can be found in the ACH580 hardware manual.

Ultimate efficiency and reliability to optimize your system’s total cost of ownership

Innovation inside
The idea is simple: Take a conventional, proven stator technology and a totally new rotor design. Then combine them with a dedicated HVAC industry drive loaded with new, application-specific software. Finally, optimize the whole package for applications such as fans, pumps, compressors, air-handling units and chillers.

Magnet-free design
Synchronous reluctance technology combines the performance of a permanent magnet motor with the simplicity and service-friendliness of an induction motor. The new rotor has neither magnets nor windings, and suffers virtually no power losses. And as it has an identical footprint, it is easy to replace an induction motor with a SynRM.

Superior reliability to minimize the cost of not running
IE4 synchronous reluctance motors have very low winding temperatures, which increases the reliability and life of the winding. More importantly, a cool synchronous reluctance rotor means significantly lower bearing temperatures – an important factor because bearing failures cause about 70 percent of unplanned motor outages.

Losses

Cost of ownership = Purchase + Cost of running + Cost of not running
Choose the motor for your HVAC application

Choose the best motor for your application. A natural match for induction motors, the ACH580 can also control high-efficiency motors such as permanent magnet or synchronous reluctance motors for greater efficiency.

**Induction motors, the industry workhorse**
Pair the ACH580 with an induction motor (IM) for simple and reliable operation in many HVAC applications and in a wide range of environments. Further simplifying setup, the ACH580 drive can be integrated with virtually any type of IM by entering the nameplate motor data only.

**Permanent magnet motors for smooth operation**
ABB has the software, hardware and application knowledge to support PM motor technology. PM technology offers users high efficiency across the speed range and customized housing for applications such as fan walls and cooling towers, as well as eliminating the need for mechanical speed reduction equipment.

**IE4 SynRM for optimized energy efficiency**
Combining the ACH580’s control technology with our synchronous reluctance motors will give you a motor and a drive package that ensures high energy efficiency, reduces motor temperatures, and provides a significant reduction in motor noise. The key is in the efficiency-optimized rotor design of our SynRM motors.
Services to match your needs

Your service needs depend on your operations, the life cycle of your equipment, and your business priorities. We have identified our customers’ four most common needs, and we created service options to satisfy them. Which will you choose to keep your drives at peak performance?

Is uptime your priority?
Keep your drives running with precisely planned and executed maintenance.

Example services include:
• ABB Ability™ Life Cycle Assessment
• Installation and Commissioning
• Spare Parts
• Preventive Maintenance
• Reconditioning
• ABB Drive Care agreement
• Drive Exchange

Is rapid response a key consideration?
If your drives need immediate action, our global network is at your service.

Example services include:
• Technical Support
• On-site Repair
• ABB Ability™ Remote Assistance
• Response time agreements
• Training

Rapid response

Operational efficiency
Drives service
Your choice, your future

The longevity of your drives is influenced by the service you choose.
Whatever you choose, it should be a well-informed decision. We have the expertise and experience to help you find and implement the right service for your drive equipment. Start by asking yourself these two critical questions:
• Why would my drive be serviced?
• What would my optimal service options be?

From here, count on our guidance and full support throughout the entire lifetime of your drives.

Your choice, your business efficiency
ABB Drive Care lets you focus on your core business. A selection of predefined service options matching your needs provides optimal, more reliable performance, extends your drive’s lifetime, and controls costs. This reduces the risk of unplanned downtime and makes it easier to budget for maintenance.

We can help you more if we know where you are!
Register your drive for advanced services.

Need to extend your assets’ lifetime?
Maximize the lifetime of your drive with our services.

Example services include:
• ABB Ability™ Life Cycle Assessment
• Upgrades, Retrofits and Modernization
• Replacement, Disposal and Recycling

Is performance most critical to your operation?
Get optimal performance out of your machinery and systems.

Example services include:
• ABB Ability™ Remote Services
• Engineering and Consulting
• Inspection and Diagnostics
• Upgrades, Retrofits and Modernization
• Workshop Repair
• Tailored services

Life cycle management

Performance improvement
A lifetime of peak performance

You’re in control of every phase of the life of your drive. At the heart of drive services is a four-phase product life cycle management model. This model defines the services recommended and available throughout your drive’s lifespan.

Now it’s easy for you to see the exact service and maintenance available for your drives.

ABB drives life cycle phases explained:

- **Active**: Product is in active sales and manufacturing phase. Full range of life cycle services and support is available.
- **Classic**: Serial production has ceased. Product may be available for plant extensions, as a spare part or for installed base renewal. Limited range of life cycle services and support is available.
- **Limited**: Product is no longer available. Replacement and end-of-life services are available.
- **Obsolete**: Product is no longer available. Limited range of life cycle services is available. Spare parts availability is limited to available stock.

**Keeping you informed**

We notify you every step of the way using life cycle status statements and announcements. The benefit for you is clear information about the status of your drives and the exact services available. It helps you plan the preferred service actions ahead of time and make sure that continuous support is always available.

**Step 1**

**Life Cycle Status Announcement**

Provides early information about the upcoming life cycle phase change and how it affects the availability of services.

**Step 2**

**Life Cycle Status Statement**

Provides information about the drive’s current life cycle status, the availability of product and services, the life cycle plan, and recommended actions.
