Asset Vision Professional 5.0 SP2

Release Notes
NOTICE

This document contains information about one or more ABB products and may include a description of or a reference to one or more standards that may be generally relevant to the ABB products. The presence of any such description of a standard or reference to a standard is not a representation that all of the ABB products referenced in this document support all of the features of the described or referenced standard. In order to determine the specific features supported by a particular ABB product, the reader should consult the product specifications for the particular ABB product.

The information in this document is subject to change without notice and should not be construed as a commitment by ABB. ABB assumes no responsibility for any errors that may appear in this document.

In no event shall ABB be liable for direct, indirect, special, incidental or consequential damages of any nature or kind arising from the use of this document, nor shall ABB be liable for incidental or consequential damages arising from use of any software or hardware described in this document.

This document and parts thereof must not be reproduced or copied without written permission from ABB, and the contents thereof must not be imparted to a third party nor used for any unauthorized purpose.

The software or hardware described in this document is furnished under a license and may be used, copied, or disclosed only in accordance with the terms of such license.

This product meets the requirements specified in EMC Directive 2004/108/EEC and in Low Voltage Directive 2006/95/EEC.

Section 1  Release Notes

Introduction

This document represents the release notes for Asset Vision Professional 5.0 SP2.

This document provides a brief overview on functionality. It lists the problems that existed in the previous versions that were fixed and corrected in this release. It also enumerates known problems encountered in the final testing of this product release and identifies workarounds that help overcome the problem. The document contains additional notes that may be valuable to customers and service personnel working with the product. It replaces the existing release notes for the prior release and is included on the product CD.

Fixed and Known Problems are divided into functional categories:

• Installation
• Administration
• Configuration
• Operational
• Instruction Manual Changes
• Miscellaneous

Product Description

Asset Vision Professional is an application for managing, configuring and optimizing assets and their performance.

The key functional areas within Asset Vision Professional are:

• Device Management and Fieldbus
• Asset Optimization

Users have access to information from these areas via the Asset Vision Professional Workplace. The traditional engineering functions for device parameterization and configuration are available. In addition, Asset Vision Professional allows the user to have direct access to device documentation, standard operating procedures, drawings etc., depending on how the application has been configured.

The enabling technique for the above is the Aspect Object™ technology.

Functionality Changes

New in This Release

This section provides an overview of changed product functionality since last release of this product.

• OPC Server PRFIBUS/HART supports simultaneous OPC and DTM communication to PROFIBUS devices and also supports specific Asset Monitors for DPV1 access.

• This release provides important maintenance information through reports such as AO Asset Condition History Report, AO Running Time Report and AO Calibration Report.

Changes in This Release

There are no functional changes to report for this release.

Product Support

Contact ABB technical support for assistance in problem reporting.
Third Party Software

Third party software included with Asset Vision Professional have been evaluated for use with Asset Vision Professional and found to be fully compatible and functional with Asset Vision Professional at the time of release. Some of the software is included with the Asset Vision Professional installation DVDs.

Refer to ABB Solutionsbank and ABB Library for an up-to-date, comprehensive listing of all software that has been evaluated including Service Packs, rollups and hot fixes released following the Asset Vision Professional release.

For Microsoft Security Updates, Validation Status for IIT System Asset Vision Professional 5.0 SP2, refer to Product Bulletin 3BSE039977 located in Solutions bank.

The complete list of software can be found at http://solutionsbank.abb.com.

When reviewing the list of software and determining what to install, the affect of the software should be evaluated for each installation. For more information on the installation procedure, refer to Asset Vision Professional - Installation Guide (3KXD151801R4401).

## Configuration

Table 3 lists the issues that may exist and affect configuration of the system or product at time of release. Workarounds, clarifications, or helpful hints have been provided for each issue wherever possible.

### Table 3. Configuration Issues

<table>
<thead>
<tr>
<th>Issue</th>
<th>Workarounds, Clarifications, and Helpful Hints</th>
</tr>
</thead>
</table>
| Changing Online PROFIBUS device address using ifak is Pro FDT DTM is not possible, when the OPC Server is selected as the Channel Type in ifak is Pro FDT DTM. | Online PROFIBUS device address can be changed in the following ways:  
1. Select the Channel Type as Fieldbus Adapter, before inserting devices under ifak is Pro FDT DTM.  
2. After scanning online devices, change the address of required devices.  
3. After the device address is changed, select OPC Server as the Channel Type in ifak is Pro FDT DTM.  
OR  
Use isPlorer that is available on the Start menu to change the device address. |
| Multiplexer assignment to default COM port, COM4 is not possible in Fieldbus Management Aspect of Multiplexer Subnet. | Remove COM4 channel using Device Management Aspect Channel Configuration and add the required COM port to assign a Multiplexer to it. |

DAT801-CN-5020-001

DAT801-CN-5020-002
Table 4 lists the issues that may exist and affect the system operation or product at time of release. Workarounds, clarifications, or helpful hints have been provided for each issue wherever possible.

### Operational

*Table 4. Operational Issues*

<table>
<thead>
<tr>
<th>Issue</th>
<th>Workarounds, Clarifications, and Helpful Hints</th>
</tr>
</thead>
<tbody>
<tr>
<td>Device Library Wizard displays product name as Asset Master instead of Asset Vision Professional.</td>
<td>Select Asset Master as a System Type in Device Library Wizard and continue.</td>
</tr>
<tr>
<td>Sometimes, while assigning a Multiplexer to the COM port, “Error in interprocess communication for FDT-services” is displayed in Fieldbus Management Aspect.</td>
<td>Close and reopen the Asset Vision Professional Workplace, when the error is displayed.</td>
</tr>
<tr>
<td>If Download operation is performed repeatedly, one after the other, then the device DTM gets disconnected.</td>
<td>When the Download operation fails, upload from the device. Change the required DTM parameter(s) and download again.</td>
</tr>
<tr>
<td>Sometimes, Aspect View of Object/Device in Control Structure becomes blank when Object/Device is selected.</td>
<td>Close and reopen the Asset Vision Professional Workplace.</td>
</tr>
</tbody>
</table>

Section 3 Known Problems

Table 4. Operational Issues (Continued)

<table>
<thead>
<tr>
<th>Issue</th>
<th>Workarounds, Clarifications, and Helpful Hints</th>
</tr>
</thead>
</table>
| When PROFIBUS adapter is disconnected, the status is not updated by ifak adapter DTM. | No workaround available. 
Ensure that PROFIBUS adapter is always connected during online communication. |
| DAT800-OL-5000-003                                                   |                                                                                     |
| When Update List operation is performed in Communication Enabled mode in Device Management Aspect of PROFIBUS adapter, a new device connected on a PROFIBUS segment is not displayed in Device List. | Disable Online communication using Fieldbus Management Aspect and disable OPC DA Service using Service Structure. Note that shutdown of is Pro Multiserver takes time (3-4 minutes). Enable Online communication again and perform update list. |
| DAT801-OL-5020-004                                                   |                                                                                     |

Instruction Manual Changes

Table 5 list the problems or issues in the instruction manuals that exist at product release. The corrections to the instruction have been indicated.
