The 4-fold Binary Input BE/S 4.230.1 with manual operation is a rail mounted device for insertion in the distribution board. The device is suitable for reading out 0...265 V AC/DC signals. Inputs A and B are independent of inputs C and D.

Buttons on the front of the device can be used to simulate the input state. The status of the inputs are displayed by yellow LEDs.

The device is ready for operation after connection to the bus voltage. The Binary Input is parameterised via ETS2 V1.3a or higher. The connection to the bus is established using the front side bus connection terminal.
